Ref: Analytical Testing
Lab Report Number: 23-111-0040
Client Project Description: Legends Park
198 N. Pauline-Memphis, TN
Project No. 0888834617

Dear Ms. Allison Harris:
Waypoint Analytical, LLC. received sample(s) on 4/20/2023 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

Metals Analysis Method 6010D
Sample 99809 (LEGSSB28-01)
Analyte: Arsenic
QC Batch No: L678073/L677686
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 99809 (LEGSSB28-01)
Analyte: Lead
QC Batch No: L678073/L677686
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A dilution test was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 99811 (LEGSSB29-03)
Analyte: Silver
QC Batch No: L678311/L677687
This analyte was analyzed at a dilution due to IEC interference/matrix interference.

Sample 99829 (LEGSSB40-01)
Analyte: Arsenic
QC Batch No: L678311/L677687
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 99829 (LEGSSB40-01)
Analyte: Lead
QC Batch No: L678311/L677687
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A dilution test was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 99829 (LEGSSB40-01)
Analyte: Selenium
QC Batch No: L678311/L677687
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

2790 Whitten Road, Memphis, TN 38133
Main 901.213.2400 ⁰ Fax 901.213.2440
www.waypointanalytical.com

Sample 99831 (LEGSSB43-01)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99833 (LEGSSB42-03)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99834 (LEGSSB43-04)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99835 (LEGSSB44-01)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99836 (LEGSSB45-01)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99837 (LEGSSB46-01)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Sample 99838 (LEGSSB46-03)
QC Batch No: L678074/L677738
One or more Internal Standards are outside method acceptance criteria. Re-analysis and/or sample dilutions are required.

Analyte: Arsenic
QC Batch No: L678311/L677738
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Analyte: Barium
QC Batch No: L678311/L677738
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A dilution test was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Analyte: Lead
QC Batch No: L678311/L677738
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Sample 99830 (LEGSSB41-01)
Analyte: Selenium
QC Batch No: L678074/L677738
This analyte was analyzed at a dilution due to IEC interference/matrix interference.

Sample 99832 (LEGSSB42-01)
Analyte: Selenium
QC Batch No: L678074/L677738
This analyte was analyzed at a dilution due to IEC interference/matrix interference.

Solids Total Mercury Analysis - CVAA Method 7471A
Sample 99824 (LEGSSB36-04)
Analyte: Mercury
QC Batch No: L678765/L678227
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

Analyte: Mercury
QC Batch No: L678810/L678230
The matrix spike and/or the matrix spike duplicate was outside quality control acceptance ranges. A post digestion spike was performed and passed quality control acceptance ranges. No matrix interference is suspected.

1.0 INTRODUCTION

EnSafe Inc. has been contracted by PennRose to complete the Soil Management Plan for the property at 981 Peach Avenue, Block A, Legends Park (Proposed Development Site) in Memphis, Tennessee (Site ID: 79-846). The Memphis Housing Authority (MHA) is the current owner but will be leasing the Proposed Development Site to Legends Park Senior LLC for construction of affordable senior housing.

The Proposed Development Site is under the Tennessee Department of Environment and Conservation (TDEC), Division of Remediation (DoR) Brownfield program (TDEC DOR #79-846). The Proposed Development Site consists of 3.8 acres of a larger 4.77-acre vacant parcel, identified as Shelby County Parcel 051017 00018, and is located within the 17.50-acre Legends Park North/West Site 79-846 ([LPNW Site], formerly a portion of the Dixie Homes Housing Development). The Proposed Development Site is included in the Brownfields Voluntary Agreement (BVA, for the LPNW Site), effective date September 9, 2010. The BVA identified various environmental conditions associated with the LPNWS including soils contaminated with polynuclear aromatic hydrocarbons (PAHs), which were buried and covered with a witness barrier and at least two feet of clean soil in the western portion of the Shelby County Parcel 051017 00018 (not within the Proposed Development Site boundaries).

The SMP is intended to assure that any excavated soil is screened, sampled, handled, transported, and disposed of (if necessary) in accordance with applicable federal, state, and local requirements/guidelines. The procedures detailed herein have been developed along with guidance from the TDEC DoR. EnSafe will implement this SMP, and observe, monitor, delineate, and document any soil removal (if warranted) across the Proposed Development Site during the Project construction activities..

1.1 Site Description

The 3.8-acres Proposed Development Site is vacant grass-covered land with no structures. Based on a review of historical resources and a Phase I Environmental Site Assessment (ESA) performed by EnSafe (dated September 21, 2022), the Proposed Development Site has been developed since at least 1897 with single- and multi-family residences and was part of the Dixie Homes public housing development from 1937 until the area was cleared for redevelopment as the Legends Park Subdivision in 2006. A former clothes cleaner and potential dry cleaner was identified at the Proposed Development Site in the 1921 city directory but no further information regarding operations at the cleaners was discovered.

The BVA was made and entered into by the MHA and four other entities, defined as the Voluntary Party, based on the presence of hydrocarbons and dry-cleaning solvents in soil gas and groundwater at the LPNW Site, which was identified as south (hydraulically upgradient) and west of the Proposed Development Site. The BVA instituted Land Use Restrictions on the LPNW Site, including the prohibition of water wells and use of groundwater on the property, the management of any discovered contaminated soils in accordance with a TDEC-approved soil management plan, and the installation of soil vapor mitigation systems for buildings constructed at the property. Additionally, PAH-impacted soils were used as geotechnical fill material on the west portion of Shelby County Parcel 051017 00018 (not within the Proposed Development Site boundaries). In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants, the soil is contained beneath an orange "witness barrier" (i.e., safety fencing) and at least two feet of clean fill material.

1.2 Investigation History

1.2.1 Phase II ESA

EnSafe completed a Phase II ESA at the Proposed Development Site in December 2021 to investigate potential soil, groundwater, and soil gas impacts associated with possible historical operations at the Proposed Development Site and surrounding area properties. Results are summarized below. Locations of exceedances for soil and soil gas are shown on Figure 1.

Soil

Samples were collected from five soil borings at two depths for analysis of volatile organic compounds (VOCs), PAHs, Resource Conservation and Recovery Act (RCRA) 8 Metals, and Extractable Petroleum Hydrocarbons (EPH). Analytical results for the soil samples were compared to the November 2021 U.S. EPA Regional Screening Levels (RSLs) for both residential and industrial land use with a lifetime target cancer risk of 1E-6 and a target hazard quotient of 0.1, and the September 2006 TDEC Department of Underground Storage Tanks (DUST) Initial Screening Levels (ISLs). Metals were also compared to the TDEC Hazardous Trace Elements in Tennessee Soils Background Levels ([TNSBL], TDEC 2001). TNSBLs are based on a statistical study of naturally occurring metals concentrations sampled throughout the state of Tennessee and are established by concentrations within the 75 percent quartile. Soil analytical results are shown in Table 1.

VOCs and EPH were not detected above screening levels in soil collected at the Proposed Development Site. A PAH (benzo(a)pyrene) exceeded its residential RSL in soil sampled from 4 to 8 feet below ground surface at the northeast corner of the Proposed Development Site (SB02). Arsenic and chromium concentrations in soil were above residential and/or industrial RSLs in all ten soil samples. Arsenic exceeded its TNSBL in one soil sample and chromium exceeded its

TNSBL in three soil samples. Though detected concentrations of arsenic and chromium in soil exceeded TNSBLs, the results are likely within the upper 25 percent quartile and are not statistically higher than the TNSBLs.

In March 2023, soil samples were collected by Tennessee-licensed asbestos inspectors in a grid pattern as shown on Figure 2. Twenty-four surface soil samples (0 to 1 foot below ground surface) were collected using hand auger techniques and wet methods. In the area where soil is being removed for construction (cut), twelve subsurface soil samples were also collected from the 1 to 3-foot interval using hand auger techniques. Soil samples were containerized, labeled, and preserved for submittal under chain-of-custody to two laboratories for analysis.

Samples for asbestos analysis were submitted to Crisp Analytical in Carrolton, Texas. Samples were analyzed using polarized light microscopy (PLM), Environmental Protection Agency (EPA) Method 600. Samples for lead analysis were submitted to Waypoint Analytical in Memphis, Tennessee. Samples were analyzed using EPA Method 6010.

Analytical results are provided for both analyses in Table 2. Asbestos was not detected in any of the soil samples collected. Only one soil sample (LEGSSB1103, 60.1 milligrams per kilogram) was slightly above the Tennessee background concentration for lead of 45 milligrams per kilogram. None of the samples exceeded the U.S. EPA residential Regional Screening Level for lead of 400 milligrams per kilogram. Based on the analytical results, no further action is required for lead and asbestos in site soil.

Additional soil samples were collected in April 2023. Samples were collected in a grid pattern as shown on Figure 2. Twenty-two surface soil samples (0 to 1 foot below ground surface [bgs]) were collected using hand auger techniques. In the area where soil is being removed for construction (cut), eleven subsurface soil samples were also collected from 1 to 3 feet, 3 to 4 feet, 4 to 5 feet, and/or 8 to 9 feet intervals using hand auger techniques. Soil samples were containerized, labeled, and preserved for submittal under chain-of-custody to Waypoint Analytical in Memphis, Tennessee. Soil samples were analyzed for VOCs, PAHs, and RCRA 8 metals. All detected VOCs were reported below their respective residential and industrial RSLs in the samples collected.

Concentrations of arsenic exceed both residential and industrial RSLs in all of the collected soil samples, except sample location SB43 at 3 to 4 feet which exceeded only the residential RSL. Arsenic concentrations at SB26 at 0-1 feet bgs, SB26 at 1-3 feet bgs, SB28 at 0-1 feet bgs, SB40 at 0-1 feet bgs, SB44 at 0-1 feet bgs, and SB46 at 0-1 feet bgs also exceeded the TDEC background

concentration of 10 milligrams per kilogram (mg/kg). Barium concentrations at SB25 at 1-3 feet bgs, SB28 at 0-1 feet bgs, SB35 at 8-9 feet bgs, and SB44 at 0-1 feet bgs were the only locations to exceed the TDEC background concentration of 144 mg/kg; however, all barium concentrations are below the residential and industrial RSLs. All cadmium concentrations are below the residential and industrial RSLs and TDEC background concentrations, except at SB28 at 0-1 feet bgs which exceeded the residential RSL and TDEC background concentration. Chromium concentrations exceeded the TDEC background concentration of 20 mg/kg at SB28 at 0-1 feet bgs and SB44 at 0-1 feet bgs; however, all chromium concentrations are below the residential and industrial RSLs. Lead concentrations exceeded the TDEC background concentration of 45 mg/kg at SB28 at 0-1 feet bgs, SB29 at 1-3 feet bgs, SB31 at 0-1 feet bgs, and SB41 at 0-1 feet bgs; however, all lead concentrations are below the residential and industrial RSLs. The concentration of mercury at SB28 at 0-1 feet bgs exceeded the TDEC background concentration of 0.18 mg/kg; however, all mercury concentrations are below the residential and industrial RSLs. The elevated metals concentrations appear to be primarily in the surficial soils with the highest concentrations detected in SB28 at 0-1 feet bgs as indicated on Figure 2.

Benzo(a)anthracene exceeded the residential RSL in soil samples collected at SB25 at 0-1 feet bgs, SB42 at 0-1 feet bgs, and SB42 at 1-3 feet bgs. Concentrations of benzo(a)pyrene (BaP) exceeded both residential and industrial RSLs in the soil sample collected from SB25 at 0-1 feet bgs and only the residential RSL in the soil samples collected from SB27 at 0-1 feet bgs, SB28 at 0-1 feet bgs, SB30 at 0-1 feet bgs, SB31 at 0-1 feet bgs, SB34 at 0-1 feet bgs, SB35 at 0-1 feet bgs, SB36 at 0-1 feet bgs, SB36 at 3-4 feet bgs, SB37 0-1 feet bgs, SB38 0-1 feet bgs, SB38 at 1-3 feet bgs, SB40 at 0-1 feet bgs, SB41 0-1 feet bgs, SB42 at 0-1 feet bgs, SB42 at 1-3 feet bgs, and SB43 at 0-1 feet bgs. Benzo(a)fluoranthene concentrations exceeding the residential RSL were collected from soil samples at SB25 at 0-1 feet bgs and SB42 at 1-3 feet bgs. Dibenz(a,h)anthracene concentrations exceed the residential RSL of 0.11 mg/kg at SB25 at 0-1 feet bgs, SB42 at 0-1 feet bgs, and SB42 at 1-3 feet bgs. All indeno(1,2,3-cd)pyrene concentrations are below the residential and industrial RSLs, except at SB25 at 0-1 feet bgs which exceeds the residential RSL. PAHs at the highest concentrations were detected in SB25 at 0-1 feet bgs.

Toxicity Equivalence Factors for BaP

Compound	TEF
Benzo(a)pyrene	1
Benzo(a)anthracene	0.1
Benzo(b)fluoranthene	0.1
Benzo(k)fluoranthene	0.01
Chrysene	0.001
Dibenz(a,h)anthracene	1
Indeno(1,2,3-cd)pyrene	0.1

Benzo(a)pyrene Data Evaluation

A comparison of the cumulative toxicity for the suite of detected PAHs was performed because not all PAHs have the same toxicity or ability to cause illness and adverse

health effects. The most toxic chemicals in the group are BaP and dibenz(a,h)anthracene. Because they are the most toxic, these PAHs are the standard by which other PAHs are assessed. To provide an overall assessment of the potential risks from the entire class of PAHs, a U.S. EPA-accepted toxicity equivalency factor (TEF) calculation was employed. The concentrations of other PAHs measured in the environment are converted to a BaP equivalent concentration based on how toxic they are relative to these two compounds. This is accomplished by multiplying their reported concentrations by their respective TEF values (listed to the right). These converted TEF concentrations are then summed to determine the BaP equivalency (BEQ) concentration for each sample. The BEQ results can then be assessed by comparing the calculated value against the TDEC Division of Remediation-provided residential BEQ soil screening value. The calculated BEQ results are shown on Table 3. The calculation of the residential BEQ screening level was provided by TDEC Division of Remediation via email on May 5, 2023. The BEQ results from the 35 soil samples across the Site were compared to the 1.15 mg/kg residential BEQ screening level. BEQ concentrations exceeded the 1.15 mg/kg screening level in three samples, SB25 from 0 to 1-foot bgs (3.605 mg/kg), SB42 from 0-1-foot bgs (1.681 mg/kg), and SB42 from 1 to 3 feet bgs (2.093 mg/kg). The two locations are shown on Figure 2.

Groundwater

Five temporary groundwater wells were sampled during the Phase II ESA in December 2021 for analysis of VOCs, PAHs, RCRA 8 Metals, and EPH. Groundwater analytical results were compared to the U.S. EPA RSLs for tap water with a lifetime target cancer risk of 1E-6 and a target hazard quotient of 0.1, U.S. EPA Maximum Contaminant Levels (MCLs), and TDEC ISLs and are shown in Table 4. VOCs, PAHs, RCRA 8 Metals, and EPH were not detected above screening levels in groundwater collected at the Proposed Development Site.

Soil Gas

Five soil gas samples were collected and analyzed for VOCs in December 2021. The soil gas analytical results were evaluated using the U.S. EPA vapor intrusion screening level (VISLs) for residential and commercial target sub-slab and near-source soil gas concentrations with a target lifetime carcinogenic risk of 10E-6 and a target noncarcinogenic hazard quotient of 0.1 and are shown in Table 5. Benzene and naphthalene were detected above residential and/or commercial VISLs in soil gas collected at the southeast corner of the Proposed Development Site (SG01).

Risk screening was performed using the U.S. EPA VISL Risk Calculator. Input parameters for the U.S. EPA VISL calculator included location-specific concentrations and default exposure assumptions for risk screening. TDEC generally requires response actions (which could include a vapor barrier,

mitigation system, monitoring, etc.) when risk is above 1E-05 and/or hazard is above 1.0. For the residential exposure scenario, carcinogenic risk ranged from 6.61E-07 to 1.20E-05, and hazard (non-carcinogenic risk) ranged from 0.00442 to 0.315. One soil gas location (SG01) exceeded the carcinogenic risk of 1E-05.

In February and March 2023, seven soil gas sampling points were advanced to 3-5 feet below the ground surface using a hammer drill in the proposed building footprint. Analytical results for the soil gas samples were compared to the November 2022 U.S. EPA Vapor Intrusion Screening Levels (VISL) for residential air. In accordance with TDEC guidance, detected chemicals were evaluated based on the cumulative target lifetime carcinogenic risk of 10E-6 and a target noncarcinogenic hazard quotient of 0.1. Laboratory detections for the soil gas samples are summarized in Table 6. Twenty-three VOCs were detected in soil gas sampled from the seven locations at the Site, and no VOCs were reported above U.S. EPA residential VISLs.

Risk screening was performed using the U.S. EPA VISL Risk Calculator. Input parameters for the U.S. EPA VISL calculator included location-specific concentrations and default exposure assumptions for risk screening; VISL risk outputs are summarized in Table 6. TDEC generally requires response actions (which could include a vapor barrier, mitigation system, monitoring, etc.) when risk is above 1E-05 and/or the hazard quotient is above 1.0. For the residential exposure scenario, carcinogenic risk ranged from 2.49E-10 to 2.38E-07 and the hazard quotient ranged from 0.00963 to 0.0386.

2.0 SOIL MANAGEMENT

EnSafe will be onsite during construction operations which may expose soil and soil gas at the localized areas of suspected contamination shown on Figure 2 and will designate these soils per the requirements listed below. PennRose, MHA, the Contractor, or a designee will notify EnSafe of when soil excavation will occur. If soil or other materials with olfactory indicators or other evidence of contamination are encountered during the construction operations in other areas of the Project, EnSafe will be notified immediately for possible sampling and segregation. Every effort shall be made to provide advance notice of these activities to EnSafe. EnSafe will screen, segregate, and sample the soil according to the procedures listed below.

2.1 Soil Screening and Segregation

As the Contractor is excavating and/or removing suspect soil, EnSafe will screen the soil at various specific locations based on the volume of soil excavated/removed. Screening will include measuring soil vapors with a photoionization detector (PID), visual observation (i.e., for staining, sheen, or other evidence of contamination), and/or examination for olfactory evidence of contamination. Results of soil screening will determine handling procedures for excavated soil. Excavated soil will be categorized by EnSafe as one of the following:

- Non-Impacted Soil (none of the above-mentioned detections)
- Category 1 Soil (suspected impacted soil)
- Category 2 Soil (impacted soil)

Criteria for segregation of soil into the above categories are detailed below. Handling of non-impacted soil will be determined by PennRose, MHA, the Contractor, and/or their designee after consultation with EnSafe. EnSafe will direct the Contractor to transport Category 1 Soil from the excavation area to the suspected impacted stockpile for future screening and sampling.

2.1.1 Non-Impacted Soil

Non-impacted soil is excavated soil that does not exhibit a visual observation (i.e., for staining, sheen, or other evidence of contamination), olfactory evidence of contamination, or elevated PID readings. EnSafe will serve on an on-call basis for the non-impacted soil and will be available to determine/discuss this type of soil upon notification by PennRose, MHA, the Contractor, and/or their designee.

2.1.2 Category 1 Suspected Impacted Soil

Category 1 Soil will be comprised of excavated soil that is suspected to be impacted. The soil delegated to the Category 1 stockpile will exhibit odor, visual evidence of contamination, or elevated PID readings. PID headspace measurements will also be collected as a screening technique. The characteristics of the excavated soil, in conjunction with the professional judgment of EnSafe, will be used to designate excavated soil as Category 1.

2.1.3 Category 2 Impacted Soil

Soil identified at SB28 and SB42 will be excavated and directly moved beneath the areas of hardscape to prevent worker and resident contact in the future. Soil identified at SB25 will be subject to a removal action. The SB25 soil will be direct loaded into dump trucks for transport and disposal at the permitted disposal facility assumed to be the Waste Management Tunica County Landfill in Robinsonville, Mississippi.

2.2 Suspected Impacted Stockpile Sampling

After field screening by EnSafe, excavated soil with evidence of contamination will be transported to the onsite stockpile area (location determined by PennRose, MHA, and/or the Contractor). The soil stockpile will be maintained by the Contractor (with assistance from EnSafe) and will be placed on plastic, covered with plastic during rain events, and properly bermed.

At designated times during the Project (when the stockpile has reached its capacity and a subsequent stockpile has been started, or when an area of soil contamination has been excavated), as determined by PennRose, MHA, the Contractor, and/or EnSafe, the excavated soil stockpile will be sampled. EnSafe will attempt to collect soil from the zone of highest suspected contamination within each designated stockpile. Stockpile sampling will be performed in order to determine whether stockpile soil will require offsite disposal at a permitted facility. The permitted facilities will likely be the Waste Management Tunica County Landfill (WM Tunica) in Robinsonville, Mississippi if characterized as nonhazardous, and the Chemical Waste Management Landfill (WM Emelle) in Emelle, Alabama if characterized as hazardous.

Soil stockpile screening and sampling will be performed by EnSafe, who will determine the number and location of field screening aliquots, as well as the number and location of stockpile soil samples to be collected for laboratory analysis. The total volume of the stockpile will be calculated and then divided by 10 to determine the number of screening samples. Samples will be collected across the entire stockpile for screening using a PID. Samples with the highest field screening results will be submitted for laboratory analysis. For stockpiles up to 60 cubic yards, one sample will be submitted

for laboratory analysis. For stockpiles from 60 to 240 cubic yards, two samples will be submitted for laboratory analysis. One additional sample will be collected from the stockpile for every additional 240 cubic yards. EnSafe will also consult with the disposal facility on the number of samples needed and if required, the regulatory authority.

2.3 Suspected Impacted Soil Stockpile Handling and Disposal

Results of the laboratory analysis of stockpile soil samples will determine soil stockpile handling and/or disposal procedures. Following receipt and review of the laboratory analytical report, EnSafe will notify PennRose, MHA, the Contractor, and/or their designee of the sample results and handling/disposal requirements for each stockpile.

In accordance with TDEC-DoR requirements, petroleum contamination will be compared to the TDEC DUST ISLs. All other contamination will be compared to the U.S. EPA RSLs for Residential Soil. If the laboratory results of the stockpile soil samples are reported below the RSLs, then the stockpiled soil will be managed as non-impacted soil. If the laboratory results of the stockpile soil samples are reported above the RSLs as listed below, then EnSafe will coordinate with WM to determine if disposal at the WM Tunica Landfill in Robinsonville, Mississippi, is appropriate, if the soil requires disposal as hazardous waste at the WM landfill in Emelle, Alabama, or if some other means of treatment and/or disposal is appropriate. Depending on volume of soil excavated, additional suspected impacted soil (Category 1) may be moved under Site hardscape.

As required for landfill disposal, a waste profile will be prepared by EnSafe, signed by the generator (in this case, Legends Park Senior LLC or MHA) or generator's designee, and submitted to Waste Management. Following approval of the waste profile, EnSafe will coordinate preparation of manifests for each truckload of soil transported offsite for disposal. Please note that non-impacted soils do not require a manifest for offsite transport/disposal.

2.4 Fill Material Sampling

If fill material is brought onsite, a sample will be collected for laboratory analysis by EnSafe in accordance with the procedures in Section 3 before it is transported to the site. The sample will be a composite to represent the volume of fill material required onsite.

3.0 SAMPLE COLLECTION AND MANAGEMENT

Soil samples will be collected using a decontaminated stainless-steel (or disposable plastic) spoon, scoop, or another sampling device. Clean, disposable, nitrile gloves shall be worn during the collection of each sample. The sample shall be immediately packed tightly into laboratory-prepared sample jars leaving as few voids as possible, then labeled, and stored on bagged, wet ice inside a cooler for subsequent overnight shipment or hand delivery to the analytical laboratory. The analytical laboratory will likely be Waypoint Analytical Inc. (Waypoint) of Memphis, Tennessee.

All samples will be maintained under strict chain-of-custody procedures. The chain-of-custody record will be maintained and completed by EnSafe and will remain with the samples until received at the laboratory. The samples and chain-of-custody form(s) will be either hand-delivered or shipped via overnight delivery to the designated laboratory. Soil samples will be analyzed for VOCs by Method 8260B, RCRA 8 Metals by Method 6010C, and TN EPH by the TN EPH Method.

PennRose, MHA, and/or the Contractor will direct EnSafe regarding turnaround times for samples throughout the project. Prior notification to the laboratory will be required for samples submitted for expedited analysis.

All sampling locations will be flagged or staked at the time of sample collection (where practical) and documented on site drawings. The Contractor will be apprised of the locations of these markers to assure (if possible) that they are not damaged by construction equipment.

3.1 Sample Collection Procedures

- The sampler will don a clean pair of protective gloves before collecting each soil sample.
- Samples will be collected with either disposable sampling devices or decontaminated stainless-steel or Teflon devices. All sampling equipment will be decontaminated before use.
- Pre-cleaned sample containers will be provided by the analytical laboratory.
- Sample jars will be filled to the shoulder with as few void spaces as possible and capped immediately to minimize volatilization.
- Sample jars will then be labeled, surrounded by bubble wrap to minimize, placed in a re-sealable bag, and placed on ice in the designated sample cooler.

- Samples exhibiting obvious visual or olfactory contamination will be separated from the samples not exhibiting such evidence.

3.2 Sample Labeling and Custody

Samples collected for laboratory analysis will be identified with a printed label containing the following information:

- Site name and location
- Date and time of sample collection
- Type of analysis to be performed
- Preservation
- Sample identification number

Sample chain-of-custody procedures will begin at the time the sample is containerized and labeled, and this procedure will continue through transport, sample receipt, preparation, analysis and storage, data generation and reporting, and sample disposal. Records of sample custody will be maintained in the field logs, project file(s), and laboratory records. EnSafe will use chain-of-custody forms for transferring samples to the laboratory. Upon transfer of custody, the form will be signed by a member of EnSafe sampling team, who will record the date and time the samples were relinquished. Laboratory staff will then sign the chain of custody which will acknowledge the transfer of custody from EnSafe sampler to the laboratory.

3.3 Decontamination Procedures

All sampling activities will be conducted in a manner designed to reduce the potential for cross-contamination. Sampling equipment will be decontaminated prior to arrival onsite and between each use. Decontamination procedures will include a laboratory-grade detergent (Liquinox) wash and a distilled/deionized water rinse. Once washed, the equipment will be set aside to air dry. In lieu of this decontamination procedure, plastic disposable equipment may be used.

Decontamination of equipment will be conducted using the following steps:

1. Clean with distilled/deionized water and Liquinox, using a brush if necessary to remove particulate matter and surface films.

2. Rinse thoroughly with tap water.

3. Rinse thoroughly with distilled/deionized water.

4. Remove the equipment from the decontamination area, allow to dry, then wrap in plastic or aluminum foil as required.

4.0 NOTIFICATION, DOCUMENTATION, AND REPORTING

4.1 Notification

Upon receipt of laboratory analytical results, EnSafe will review the analytical data. If petroleum contamination is identified, the results will be compared to the TDEC DUST ISLs. For all other contamination, the results will be compared to the U.S. EPA RSLs. PennRose, MHA, and/or the Contractor will then be notified if soil concentrations exceed these above-mentioned thresholds. Following notification to PennRose and MHA, and in accordance with TDEC requirements, TDEC DoR will be notified by telephone (and/or email) of any laboratory analytical results that exceed these above-mentioned thresholds.

TDEC DoR will be notified of the sample type, location, concentrations detected, and recommended action to be taken (if any). The notification will be made to the TDEC DoR Case Manager, Alison Campany, by phone, fax, and/or email:

Tennessee Department of Environment and Conservation
Division of Remediation, Memphis Environmental Field Office (EFO)
8383 Wolf Lake Drive
Bartlett, Tennessee 38133
Phone: 901-371-3000
Fax: 901-371-3170

4.2 Documentation

Field sampling activities will be documented daily in a project field log. The project field log, copies of chain-of-custody records, copies of laboratory analytical reports, and drawings depicting sample locations will be maintained at the Proposed Development Site and/or EnSafe's office.

4.3 Reporting

At the direction and discretion of PennRose or MHA, periodic reports will be completed by EnSafe and submitted to PennRose, MHA, and/or Contractor. The content of the report will be determined by PennRose or MHA and may include documentation of areas sampled, a summary of analytical findings, a discussion of areas currently under oversight of EnSafe, and stockpile status, sampling, and transport/disposal performed to date. The report may also document the location of impacted soil under hardscape that remains onsite.

Following completion of the Project, EnSafe will compile a report of activities performed, including daily project field logs, drawings depicting stockpile sample locations and any other onsite samples collected, analytical laboratory reports for all samples collected, any periodic reports (if completed),

stockpile documentation, final soil cover, and soil disposal records (including waste profiles and manifests). This report will be submitted to TDEC DoR.

4.4 Land Use Restriction

It is anticipated that a Notice of Land Use Restriction will be placed on the property deed. The installation of shallow wells and use of onsite groundwater at the Proposed Development Site is prohibited, except for environmental monitoring and remediation. Following construction of the primary building, any additional building(s) or building expansion will require evaluation of potential vapor intrusion. The evaluation will be shared with TDEC. If warranted , a vapor mitigation system will be proposed and approved by TDEC. Following system installation, verification sampling and reporting will be conducted.

4.5 Certification Statement

I certify under penalty of law, including but not limited to penalties for perjury, that this document and all attachments were prepared by me or under my direction or supervision. The submitted information contained in this document and on any attachment is true, accurate, and complete to the best of my knowledge, information, and belief. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for intentional violation. As specified in Tennessee Code Annotated § 39-16-702(a)(4), this declaration is made under penalty of perjury.

Notes:

CAS No. = Chemical Abstracts Service number

ft = feet

NE = Not Established

RSL Residential Soil = US EPA Regional Screening level (RSL) HQ=0.1 for Residential Soil (November 2022)

RSL Industrial Soil = US EPA Regional Screening level (RSL) HQ=0.1 for Industrial Soil (November 2022)

TN BKG Value = Tennessee soil background value

J = Estimated value

U = Non-Detect

Bold = Detected Value

Shaded/Bold = exceeds screening value

a = exceeds RSL Industrial Soil

b = exceeds RSL Residential Soil

c = exceeds TN BKG Value

* = Tennessee Department Environment and Conservation Benzo(a)pyrene Equivalency (BEQ) Screening Level for residential land use provided via email on May 5, 2023.

Red exceeds BEQ for residential use of 1.15 mg/kg.

Relative Potency Factors for Carcinogenic Polycyclic Aromatic Hydrocarbons

Compound	RPF
Benzo(a)pyrene	1
Benz(a)anthracene	0.1
Benzo(b)fluoranthene	0.1
Benzo(k)fluoranthene	0.01
Chrysene	0.001
Dibenz(a,h)anthracene	1
Indeno(1,2,3-c,d)pyrene	0.1

Notes:

CAS No. = Chemical Abstracts Service number

ft = feet

NE = Not Established

RSL Residential Soil = US EPA Regional Screening level (RSL) HQ=0.1 for Residential Soil (November 2022)

RSL Industrial Soil = US EPA Regional Screening level (RSL) HQ=0.1 for Industrial Soil (November 2022)

TN BKG Value = Tennessee soil background value

J = Estimated value

U = Non-Detect

Bold = Detected Value

Shaded/Bold = exceeds screening value

a = exceeds RSL Industrial Soil

b = exceeds RSL Residential Soil

c = exceeds TN BKG Value

* = Tennessee Department Environment and Conservation Benzo(a)pyrene Equivalency (BEQ) Screening Level for residential land use provided via email on May 5, 2023.

Red exceeds BEQ for residential use of 1.15 mg/kg.

Relative Potency Factors for Carcinogenic Polycyclic Aromatic Hydrocarbons

Re: Final Approval of Contaminated Tank Closure
UTHSC Medical Center Emergency Building Generator Building
956 Court Avenue, Memphis
Facility ID #0-792203, Shelby County

Dear Mr. Jeffres:

The Division of Underground Storage Tanks (Division) has received the March 10, 2023 Permanent Closure Report for the referenced facility. Based on the information available, tank 1A (a 2,000-gallon diesel underground storage tank – UST) closed in place on November 30, 2022, can be considered permanently closed. The Division will require no further action at this time regarding the permanently closed tank(s) and /or line(s) unless new information is discovered substantially changing the facts as we know them today.

Rule 0400-18-01-.03(1)(g) states, in part: "Any change in the status of the tanks at a petroleum UST facility shall be reported within thirty (30) days of said change. This includes but is not limited to changes of ownership, upgrading or replacement of tanks, changes in mailing address, permanent closure of a tank compartment, and changes in service. Such reports shall be made using an amended notification form."

If an amended notification form has not been submitted, then complete and mail the form to:

Central Office Notification Section
Tennessee Department of Environment and Conservation
Division of Underground Storage Tanks

William R. Snodgrass TN Tower
312 Rosa L. Parks Avenue, 12th Floor
Nashville, Tennessee 37243-1541

If soils are excavated and removed from the UST site for use at another location, then the Division of Solid Waste Management must be contacted regarding the proper disposal and/or use of those soils.

All forms and guidance are available at https://www.tn.gov/environment/program-areas/ust-underground-storage-tanks.html.

If you have any questions concerning this correspondence, please do not hesitate to contact me at (615) 708-9003.

Tell us how we're doing! Please take 5-10 minutes to complete our customer survey form at https://www.tn.gov/environment/about-tdec/contact-tdec-customer-service-form.html.

Sincerely,

Susan E. Watts
Division of Underground Storage Tanks

USER QUESTIONNAIRE AND PROPOSAL CHECKLIST
ASTM E1527-13 Phase I Environmental Site Assessment

1. Applicability — Per ASTM E1527-13, if the reason for the Phase I ESA is not provided, EnSafe shall assume the purpose is to qualify for one of the landowner liability protections listed in a., b., or c. (below).

Please identify from the lists below all applicable reasons for requesting this Phase I Environmental Site Assessment:

Reasons applicable to the "All Appropriate Inquiries" Final Rule (40 Code of Federal Regulations Part 312):

- ☐ a. Person seeking to establish the innocent landowner defense to CERCLA liability
- ☐ b. Person seeking to establish bona fide prospective purchaser landowner liability protection to CERCLA liability
- ☐ c. Person seeking to establish the contiguous property owner landowner liability protection to CERCLA liability
- ☐ d. Person conducting site characterization and assessments with the use of a CERCLA grant (Brownfields)

If one of the above is applicable, please complete the "User Responsibilities" questions in Section 2.

Additional reasons for performing a Phase I Environmental Site Assessment:

- ☑ e. As part of due diligence prior to purchase
- ☑ f. Obtaining financing
- ☐ g. Selling a property
- ☐ h. Originating or renewing a lease
- ☐ i. Terminating a lease or vacating a property
- ☑ j. In anticipation of a property/business ownership transaction
- ☐ k. Establishing baseline conditions at a property
- ☐ l. Identifying potential business environmental risks associated with a property

A business environmental risk is defined by ASTM E1527-13 as a risk that can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to required components within the scope of an ASTM Phase I ESA. Business environmental risks are commonly associated with ASTM "non-scope issues" listed in Section 4. If Box l. is selected in this section, please complete Section 4.

Yes	No	**2. User Responsibilities**

These are tasks under the "All Appropriate Inquiries" Final Rule at 40 Code of Federal Regulations Part 312 that must be performed by or on behalf of the party seeking to qualify for a landowner liability protection to CERCLA liability. EnSafe is required to request the intended "User" of the Phase I ESA provide the information from those tasks, as it may be material in identifying recognized environmental conditions. Although the User of the Phase I ESA is not required to provide that information to EnSafe, the User remains responsible for their completion. For any boxes that are checked "Yes" please provide the additional information that you would like EnSafe to consider as part of the Phase I ESA. If the User of the Phase I ESA is not seeking a landowner liability protection to CERCLA liability but has pertinent information, answering the following questions will assist EnSafe.

☑	☐	a. Are there any environmental cleanup liens or activity and land-use limitations in place or filed or recorded against the property under federal, tribal, state, or local law, based on review of recorded land titles and judicial lien records? *If you haven't obtained the information through transaction-related title insurance documents, title abstracts, etc., would you like EnSafe to obtain and review land title records and judicial records at an additional cost (determined based on the number of parcels)? If so, please contact us for a quote.*
☐	☑	b. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☐	☐	c. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? In other words, what is the relationship of the purchase price to the fair market value of the property, if the property were not contaminated? If you conclude that there is a difference, is the lower purchase price related to contamination that is known or believed to be present at the property?

N/A ground lease

USER QUESTIONNAIRE AND PROPOSAL CHECKLIST
ASTM E1527-13 Phase I Environmental Site Assessment

☑	☐	d.	Are you aware of commonly known or reasonably ascertainable information about the property that would help EnSafe identify conditions indicative of releases or threatened releases? For example, (i.) The past uses of the property? (ii.) Specific chemicals are or have been used or stored at the property? (iii.) Spills or other chemical releases that have occurred at the property? (iv.) Environmental cleanups that have taken place at the property? (v.) Do you have other information relevant to the Phase I ESA? BVA Agreement - Ensafe has the appropriate information
☐	☑	e.	Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property?

3. Special Reporting Requirements (if applicable)

Specify whether you, your client, and/or lender have special requirements for the Phase I ESA?

☐	a.	No additional requirements apply to this Phase I ESA.
☑	b.	Additional requirements apply and have been attached or discussed. Must meet THDA NHTF standards - communicated to Ensafe

4. ASTM Non-Scope Considerations

If you would like EnSafe to include any of the following issues as part of the Phase I ESA, please check the appropriate box, and an EnSafe representative will contact you, as necessary, to discuss further and determine whether modifications to the attached cost estimate will be necessary.

☑	a. Asbestos-Containing Materials
☑	b. Radon
☑	c. Lead-Based Paint
☑	d. Lead in Drinking Water
☑	e. Wetlands
☑	f. Regulatory Compliance — Environmental
☑	g. Regulatory Compliance — Health and Safety
☑	h. Indoor Air Quality
☑	i. Mold
☑	j. Substances not Defined as Hazardous Substances (aka emerging contaminants like PFAS)
☑	k. Vapor Intrusion
☑	l. Biological Agents
☑	m. Cultural and Historic Resources
☑	n. Ecological Resources
☑	o. Endangered Species
☑	p. Industrial Hygiene
☐	q. Other (please specify)

Yes	No		**5. Additional Requirements**
			Is this Phase I ESA being conducted:
☐	☐	a.	To satisfy environmental policy requirements of the Small Business Administration (SBA), or is SBA otherwise involved in lender or development aspects of this property?
☐	☐	b.	To document compliance with Housing and Urban Development standards at 24 Code of Federal Regulations 58.5(i)(2) or 50.3(i)?

USER QUESTIONNAIRE AND PROPOSAL CHECKLIST
ASTM E1527-13 Phase I Environmental Site Assessment

6. Site Contact(s)

Please provide contact information for EnSafe to gain access to the property and identify a Key Site Manager *(someone who has good knowledge of the uses and physical characteristics of the property)*.

Name: Deborah Payne
Contact Info: 1-901-544-1827

7. Report Addressed

If the report must be addressed to someone other than the proposal recipient, please specify the following information for each person/company/entity to which the report must be addressed.

Name: Brian Thomas
Title: Developer
Company: Legends Park Senior, LLC
Address: 675 Ponce De Leon
City, State, Zip: Avenue, Suite 8500
Phone: 404-759-1733
Email: bthomas@pennrose.com

8. Report Distribution

Reports will be provided electronically, unless otherwise specified. Email reports to:

If hard copies are requested, please provide name, company, and shipping address:

9. Property Location Description

Please provide any additional descriptions of the subject property, parcel number, and/or "as-is" map showing the property boundaries and developments below or in a separate attachment. Ensafe has latest property informati

EXECUTIVE SUMMARY

EnSafe Inc. performed a Phase I Environmental Site Assessment (ESA) of the Block A of the Legends Park Subdivision property in Memphis, Shelby County, Tennessee (subject property), in general conformance with the ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13 (ASTM 2013).[1] The goal of this Phase I ESA is to identify evidence of *recognized environmental conditions*.[2] The findings, conclusions, and environmental professional opinion in this Phase I ESA report result from interviews; historical, government, and physical setting resource review; and subject property reconnaissance on January 6, 2023.

This environmental assessment has identified the following associated with the subject property:

- The subject property consists of 3.82 acres of a larger 4.77-acre vacant parcel identified as Shelby County Parcel 051017 00018 and is located within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). The subject property is adjoined to the north by Peach Avenue then Interstate 40, to the east by Decatur Street then multi-family residences and a church, to the south by multi-family townhomes, Red Sox Lane, and apartment buildings, and to the west by a portion of the vacant larger parcel.

- The subject property has been developed since at least 1897 with single and multi-family residential buildings. The subject property was part of the former Dixie Homes public housing development from 1937 until 2006, when the area was cleared for redevelopment as the Legends Park Subdivision.

- The Brownfields Voluntary Agreement (BVA) Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include: 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restrictions 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a Tennessee Department of Environment and Conservation (TDEC) approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in environmental database records and in a city directory for the year 1921 (EnSafe 2020). No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

[1] ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

[2] ASTM defines a *recognized environmental condition* as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment."

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information was identified in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners and Dyers may have operated as a dry cleaner.

- The west- and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, petroleum polyaromatic hydrocarbon impacted soils were used as geotechnical fill material on the west-adjoining property. To prevent exposure to the petroleum polyaromatic hydrocarbons, the soil is contained beneath an orange "witness barrier" (i.e., safety fencing) and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored hazardous substances and/or petroleum products including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products.

- Five soil gas samples were collected throughout the subject property in 2021. Benzene and naphthalene were detected at concentrations exceeding the United States Environmental Protection Agency residential Vapor Intrusion Screening Levels in one sample location (SG01) on the southeast portion of the subject property. Additionally, concentrations in SG01 exceeded the acceptable residential carcinogenic risk quotient of 1E-05 with a result of 1.20E-05. The planned construction of a new building at the subject property is not in the vicinity of SG01; however, the intended use of the subject property and location of future structures will dictate further recommendations for soil vapor mitigation.

This assessment has revealed evidence of the following *recognized environmental condition* and *controlled recognized environmental condition* in connection with the subject property.[3]

- BVA Site ID 79-846 includes the subject property and adjoining properties to the west and south. The BVA outlines environmental conditions identified upgradient of these properties that include: 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination, which constitutes a *recognized environmental condition* for the subject property.

[3] ASTM defines a *controlled recognized environmental condition* as "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- The subject property is subject to land use restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, land use restrictions are considered a *controlled recognized environmental condition*.

This executive summary is an excerpt of a detailed Phase I ESA report that includes elements necessary for proper interpretation, including any limitations, exceptions, and deletions to ASTM 2013 and established scope of work. As such, the executive summary should not be used independently of the Phase I ESA report and its supporting documentation.

1.0 INTRODUCTION

EnSafe Inc. was retained by PennRose to conduct a Phase I Environmental Site Assessment (ESA) of the Block A of the Legends Park Subdivision property in Memphis, Shelby County, Tennessee (subject property), as shown on Figure 1 (Appendix A). The subject property consists of 3.82 acres of a 4.77-acre vacant grass-covered parcel identified as Shelby County Parcel 051017 00018, which occupies approximately the east half of a city block bound by Peach Avenue, Decatur Street, Delmar Avenue, and Ayers Street. Additionally, the subject property is within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). Figure 2 (Appendix A) is a Site Vicinity Map, which shows the subject property and adjoining properties.

1.1 Purpose

The subject property was assessed with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and petroleum products. This assessment is intended to constitute all appropriate inquiries (AAI) into the previous ownership and uses of the property consistent with good commercial and customary practice as defined in 42 United States Code Section 9601 (35)(B) and promulgated at 40 Code of Federal Regulations Part 312 (AAI Final Rule). As such, the assessment is intended to permit the designated *user* to satisfy one of the requirements to qualify for the innocent landowner, bona fide prospective purchaser, or contiguous property owner limitations on CERCLA liability (hereinafter, the Landowner Liability Protections).

The ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13 (ASTM 2013) is the current industry standard used to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate.[1] The goal of a Phase I ESA is to identify evidence of *recognized environmental conditions,* defined by ASTM as, "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

[1] ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

In accordance with ASTM 2013, this Phase I ESA was also intended to identify the following:

- *Controlled recognized environmental condition:* "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Historical recognized environmental condition:* "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Business environmental risk:* "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."

- *De minimis condition:* "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." A condition found to be *de minimis* is not a *recognized environmental condition* or *controlled recognized environmental condition*.

1.2 Scope of Services

The Phase I ESA includes the following:

- Visual assessment of the subject property on January 6, 2023, by Mr. Trace Hilbun of EnSafe under the direction of Ms. Allison Harris of EnSafe; resumes are included in Appendix B.

- Interviews with personnel discussed in Section 3.1.

- Review of standard and additional federal, state, and local environmental records sources for the subject property and properties within ASTM 2013 approximate minimum search distances (AMSDs). Database search information is provided in Appendix C.

- Review of the historical resources (i.e., United States Geological Survey topographic maps, aerial photographs, fire insurance maps, and city directories), land-use records included in the prior Phase I ESA, and regulatory files available through the Tennessee Department of Environment and Conservation (TDEC), dated February 2022 (EnSafe, February 2022).

- Review of regulatory information available from the United States Environmental Protection Agency (U.S. EPA) Envirofacts website, regulatory reports response from the City of Memphis Division of Fire Services, and a summary of the TDEC records request. Select information is provided in Appendix D.

- Review of historical, physical setting, and regulatory information from Phase I ESAs of the subject property dated November 2020, February 2022, and September 2022 (EnSafe 2020, February 2022, and September 2022); the September 2022 Phase I ESA is included in Appendix E of this Phase I ESA. The February 2022 Phase I ESA is included in Appendix E of the September 2022 Phase I ESA.

- Review of the user questionnaire provided to the Client and completed by Mr. Brian Thomas, PennRose Developer, as documented in Appendix E of the September 2022 Phase I ESA, which is included in Appendix E of this Phase I ESA.

- Review of information from the websites listed in Section 6.

1.3 Client Information and User Responsibilities

EnSafe was retained by PennRose to conduct the Phase I ESA. According to ASTM, the *user* shall make known the reason for the Phase I ESA. In contracting EnSafe for the Phase I ESA, Mr. Thomas indicated the Phase I ESA was being conducted as part of due diligence before purchase, to obtain financing, and as part of a 4% Low-Income Housing Tax Credit Application with the Tennessee Housing Development Agency.

The AAI Final Rule and Section 6.0 of ASTM 2013 describe tasks to be performed by the *user* that are required to qualify for Landowner Liability Protections to CERCLA liability. The information that results from those tasks should be provided to the environmental professional to consider with respect to identifying *recognized environmental conditions*. Appendix E contains a questionnaire (Appendix E of the September 2022 Phase I ESA) provided to the *user* outlining those tasks.

1.4 Non-Scope Items

At the request of PennRose, and as documented in Appendix E, EnSafe's Phase I ESA scope of work was not expanded to include consideration of environmental issues or considerations that are beyond the scope of ASTM 2013.

2.0 PHYSICAL SETTING

Table 1 summarizes information obtained from review of physical setting sources and other sources reviewed during the Phase I ESA listed in Section 1.2.

Table 1
Physical Setting Summary

Topography	
Elevation (feet above mean sea level)	255 to 270
Topography	The central portion of the subject property is higher in elevation than the property perimeter. Additionally, the central-east portion is higher than the central-west portion.
Evidence of landfilling or excavation	Soil from other areas within the Legends Park Subdivision was stockpiled and used as fill on the subject property, which is further discussed in Section 4.1.4. In addition, "abundant brick debris" was encountered at 4 to 6 feet below ground surface (bgs) and concrete was encountered at 6 feet bgs in boring SB02 advanced in the central-east portion of the subject property in 2021. Traces of brick, sand, and cinders were encountered at 10 feet bgs in boring SB03 in the central-north portion of the subject property (EnSafe 2021).
Adjoining — higher elevation	East-southeast
Adjoining — lower elevation	Southwest
Surface Water and Subject Property Drainage	
Subject property surface water features	None
Adjoining surface water features	None
Nearest water body	Quimby Bayou
Direction and approximate distance to nearest water body	Approximately 740 feet west
Storm water management	Storm water that does not infiltrate grass surfaces is expected to follow surface topography and flow toward curbside storm drains on adjoining streets.
Flood zone (summarized from Appendix E)	The subject property is not mapped within the 100- or 500-year flood zones.
Wetlands (summarized from Appendix E)	No wetlands are mapped on the subject property.
Geology	
Soil types (and estimated depths/thickness)	Five soil borings installed in 2021 to depths of 28 to 32 feet bgs encountered predominantly silty clay. Limited intervals of silty clay with gravel and sand or with pebbles and gravel were encountered in some of the borings. Alternating clay and silty clay were also encountered in a few borings at depths greater than 20 feet bgs (EnSafe 2021).
Bedrock (depth and type)	Not reported in sources reviewed for this assessment.
Hydrogeology	
Wells on subject property	Five temporary groundwater wells installed in 2021 were removed and abandoned by backfilling with bentonite chips after sampling (EnSafe 2021).
Approximate depth to groundwater (feet) at the subject property	Groundwater was observed at 12 to 25 feet bgs in 2021 (EnSafe 2021).
Reported direction of groundwater flow at the subject property	Not identified in sources reviewed for this assessment.
Relevant surrounding property wells	Two sentinel groundwater monitoring wells installed at 918 and 934 Poplar Avenue (within the Legends Park Subdivision) are approximately 0.20 and 0.25 mile southwest of the subject property.
Approximate depth to groundwater (feet)	12 to 25
Reported direction of groundwater flow	North to northwest

3.0 SUBJECT PROPERTY

Subject property information discussed below was obtained from interviews and sources identified in Section 1.2 and referenced in Section 6.

3.1 Interviews

Table 2 lists personnel interviewed, indicates their association with the subject property or this Phase I ESA, and summarizes topics discussed and information provided. Table 2 also lists local and state agencies from which EnSafe requested information and the results of those inquiries.

Table 2
Summary of Interviews

Name	Affiliation	Association with Subject Property	Time[1]	Information Provided/ Section Discussed
Ms. Deborah Payne	Memphis Housing Authority	Key Site Manager Current Owner Representative	14	Ms. Payne provided information regarding current and historical subject property operations and development. Information provided is discussed in Sections 3 and 4.
Ms. Luretha Phillips	Memphis Housing Authority	Current Owner Representative	26	Ms. Phillips provided information regarding current and historical subject property operations and development. Information provided is discussed in Sections 3 and 4.
Ms. Alison Campany	TDEC — Division of Remediation	State Environmental Agency Official	20	Ms. Campany provided information regarding an unplottable DoR site identified in the environmental database report. Information provided is discussed in Section 4.3
Summary of Records Requests				
Name	**Agency**			**Result of Inquiry/Section Discussed**
Ms. Patricia Alston	Memphis Division of Fire Prevention			No records were identified related to the subject property. No records related to adjoining or surrounding properties were identified.
Ms. Valencia Cambrice	TDEC — Division of Remediation			Additional records beyond those obtained during the February 2022 Phase I ESA were not identified for the subject property or adjoining and surrounding properties.

Notes:
[1] Length of time or number of years the person has been affiliated or familiar with the subject property or surrounding area.
TDEC = Tennessee Department of Environment and Conservation

3.2 Prior Environmental Assessments

Prior environmental assessments that include the subject property have been conducted since 2003, including four Phase I ESAs, soil sampling summaries, and multiple Phase II ESA investigations. Reports summarized in this section are those evaluating the portion of the Legends Park Subdivision

(former Dixie Homes) north of Delmar Avenue (i.e., portions of the Legends Park Subdivision site that include the subject property). Findings for the entire Legends Park Subdivision site are summarized in Section 3.6. A copy of the prior September 2022 Phase I ESA is included in Appendix E.

2020 Phase I Environmental Site Assessment

A Phase I ESA for the approximate subject property boundary was performed in November 2020 (EnSafe 2020). The Phase I ESA identified that Legends Park Subdivision (including the subject property) lies within the Dixie Homes State Remediation Program (SRP) site 79-846 (discussed in Section 3.6); additionally, a Notice of Land Use Restriction was imposed on the Legends Park Subdivision as an institutional control to address groundwater contamination. The 2020 Phase I ESA identified the following *recognized environmental condition* and *controlled recognized environmental condition*:

- "Given the BVA [Brownfields Voluntary Agreement] and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property."

- "The subject property is subject to Land Use Restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*."

2021 Phase II Environmental Site Assessment

In December 2021, a Phase II ESA was conducted to evaluate the site for potential chemicals of concern associated with historical operations. Five soil borings (SB01-SB05) were advanced at the subject property portion of the Brownfields Voluntary Agreement (BVA) site (EnSafe 2021). Two soil samples were collected from each soil boring location and each was converted into a temporary monitoring well to collect a groundwater sample. Additionally, soil gas samples were collected from five locations across the subject property.

Metals data identified arsenic and chromium concentrations in soil above residential and industrial U.S. EPA Regional Screening Levels (RSLs). Arsenic concentrations exceeded the Tennessee background level (10 milligrams per kilogram [mg/kg]; TDEC 2001) in a single soil sample from 16 to 20 feet below ground surface (bgs). Chromium concentrations exceeded the Tennessee background level (20 mg/kg; TDEC 2001) in soil samples from three separate soil borings from 24 to 32 feet bgs. The Phase II ESA report concluded the concentrations of arsenic and chromium were not statistically higher than the Tennessee background levels. Polyaromatic hydrocarbon (PAH) data identified benzo(a)pyrene concentrations in soil from 4 to 8 feet bgs in one soil boring above residential and industrial RSLs. All other detected concentrations in soil were below RSLs, including volatile organic compounds (VOCs) and extractable petroleum hydrocarbons.

Groundwater samples did not have detected concentrations of metals, VOCs, PAHs, or extractable petroleum hydrocarbons above their respective U.S. EPA maximum contaminant level or tapwater RSLs.

Five soil gas samples (SG01-SG05) were collected throughout the subject property. The VOC data identified benzene (13.8 micrograms per cubic meter [µg/m^3]) and naphthalene (26.8 µg/m^3) concentrations in one soil gas sample location (SG01) above the U.S. EPA residential Vapor Intrusion Screening Levels (VISLs) of 12 µg/m^3 for benzene and 2.75 µg/m^3 for naphthalene. Additionally, naphthalene exceeded the commercial VISL of 12 µg/m^3. Concentrations detected at SG01 also exceeded the maximum U.S. EPA VISL carcinogenic risk, a calculated and location-specific unitless quotient, of 1E-05 with a risk of 1.20E-05. The Phase II ESA report concluded vapor mitigation should be considered for future development within sample area SG01 (southeast corner of the subject property), and the future use of the subject property will dictate further recommendations for, but not limited to, a passive mitigation system or vapor barrier.

February 2022 Phase I Environmental Site Assessment

A Phase I ESA conducted in February 2022 included ASTM 2013 non-scope items concerning National Environmental Policy Act environmental factors (EnSafe 2022). The Phase I ESA identified the same *recognized environmental condition* related to the BVA and surrounding area properties and the same *controlled recognized environmental condition* related to the Notice of Land Use Restriction detailed in the 2020 Phase I ESA. Additionally, the February 2022 Phase I ESA stated the ASTM 2013 non-scope issues related to compliance with the National Environmental Policy Act were assessed under National Housing Trust Fund guidance, and the project was found to comply with ASTM non-scope issues.

September 2022 Phase I Environmental Site Assessment

In September 2022, an update to the February 2022 Phase I ESA was conducted. The update identified no new findings related to the subject property and the surrounding area properties. Therefore, the September 2022 Phase I ESA identified the same *recognized environmental condition* related to the BVA and surrounding area properties and the same *controlled recognized environmental condition* related to the Notice of Land Use Restriction detailed in the previous Phase I ESAs.

3.3 Historical Development and Uses

The historical document review and interviews were conducted to identify evidence of *recognized environmental conditions* in connection with past uses of the subject property.

3.3.1 Historical Development

The earliest historical resource reviewed for this Phase I ESA is an 1897 fire insurance map, included with historical sources obtained for the February 2022 Phase I ESA, included in the September Phase I ESA in Appendix E, which shows the subject property developed with numerous residential buildings along the east, south, and west portions, with a small stream traversing the north portion. The subject property remains primarily residential, except for a few shops/storefronts along Decatur Street, on the 1907 fire insurance map. Additionally, the small stream is no longer depicted by 1907. The 1916 and 1927 topographic maps depict multiple small structures in the central portion of the subject property and along the east and west property boundaries. A 1937 aerial photograph shows what appear to be multi-family residential buildings constructed throughout the subject property, except on the extreme eastern portion. The 1951 and 1952 fire insurance maps indicate the Dixie Homes Apartments residential buildings were constructed between 1936 and 1937, and apartment buildings on the east portion of the subject property were constructed in 1950. The subject property remains relatively unchanged in subsequent aerial photographs reviewed through 2006, except for the construction of Interstate 40 and rerouting of Peach Avenue along the north subject property boundary between 1969 and 1973. By 2007, the buildings have been razed and the subject property appears to be a vacant, unpaved, grass-covered lot. The 2010 aerial photograph shows the subject property cleared of most vegetation in preparation for development and construction activities, with several excavators visible. Grading and construction activities appear to continue until early 2012. By the November 2012 aerial photograph, the subject property is completely covered with grass. No significant changes were noted on aerial photographs reviewed from 2012 to 2022

City directories obtained as part of the February 2022 Phase I ESA (EnSafe, February 2022) were reviewed at 3- to 6-year intervals from 1932 through 2020. The subject property had multiple addresses associated with residential buildings between 1932 and 2005: 945 to 1001 Peach Avenue, 319 to 347 Decatur Street, and 980 Delmar Avenue. The 2020 Phase I ESA (EnSafe 2020) identified one subject property address, 335 Decatur Street, as Minkie Jos, a potential former dry cleaner, which is listed in the 1921 city directory.

3.3.2 Historical Uses and Operations

Based on historical sources reviewed, the subject property has been developed since at least 1897. Historical records indicate the subject property was residential in 1897 and remained primarily residential until 2006. According to Ms. Luretha Phillips with the Memphis Housing Authority (MHA), the former Dixie Homes, a public housing development, began construction in 1938; the former public housing development included the subject property parcel and multiple parcels to the south. According to Ms. Deborah Payne of the MHA, the MHA acquired title to the Dixie Homes site from the U.S. Housing and Home Finance Agency and Public Housing Administration in April 1951 and 1953. Based on information provided by MHA representatives, the housing development remained relatively unchanged until the buildings were demolished in 2006. Based on environmental records reviewed (discussed in Section 3.6), pre-construction activities, including various environmental assessments and investigations, were conducted for the Legends Park Subdivision (including the subject property) between 2003 and 2012. According to Ms. Phillips, building construction within the Legends Park Subdivision began in 2009. A 2010 aerial photograph appears to show the subject property being used to stage construction materials and equipment for offsite construction. The subject property has remained vacant since approximately 2012.

3.4 Current Uses

The subject property was visually assessed on January 6, 2023, by Mr. Hilbun of EnSafe. The purpose of the site reconnaissance was to determine current uses and to identify evidence of *recognized environmental conditions* in connection with the subject property. Photographs taken during the site visit are in Appendix F. EnSafe personnel walked throughout the subject property unaccompanied. Adjoining and surrounding area properties were observed from the subject property boundaries and from nearby roads and driveways.

The subject property comprises 3.82 acres of vacant grass land within the Legends Park Subdivision with a fence comprising the north, east, and southeast subject property perimeter. Ms. Payne stated the subject property had no current operations or uses. MHA representatives had no knowledge of

groundwater wells, septic tanks/systems, underground storage tanks, aboveground storage tanks, and/or utility services associated with the subject property.

3.5 Exterior Observations

Table 3 lists environmental issues and identifies those present or applicable to the subject property, based upon EnSafe's visual observations of the exterior, interviews, review of environmental records sources, regulatory research, and other publicly available and reasonably ascertainable information. Each environmental issue present or applicable is discussed in sections as noted in the table.

Table 3
Subject Property Observations

Current or Past Use	Present or Applicable	Comment/Report Section
Hazardous Substances and Petroleum Products	**No**	—
Storage Tanks	**No**	—
Odors (strong, pungent, or noxious)	**No**	—
Pools of Liquids	**No**	—
Drums (5 gallons and larger)	**No**	—
Unidentified Substance Containers	**No**	—
Polychlorinated Biphenyls (associated with electric or hydraulic equipment)	**No**	—
Fuel Source for Heating and Cooling Systems	**No**	—
Stains or Corrosion (on building walls, floor, and ceilings)	**No**	—
Floor Drains, Sumps, and Pits	**No**	—
Pits, Ponds, or Lagoons	**No**	—
Stained Soil or Pavement	**No**	—
Stressed Vegetation	**No**	—
Solid Waste	**Yes**	Windblown trash (e.g., food wrappers, drink containers) was observed along the north, east, and south perimeter of the subject property. Additionally, a discarded automobile tire was observed along the east fence line.
Hazardous Waste	**No**	—
Wastewater	**No**	—
Wells	**No**	—
Septic Systems or Cesspools	**No**	—

3.6 Environmental Records Review

EnSafe obtained standard environmental record source information directly from a commercial service, TDEC, and U.S. EPA databases. The Legends Park Subdivision (former Dixie Homes), which includes the subject property, was identified on the TDEC Voluntary Cleanup, Oversight and Assistance Program (VOAP), Brownfield, and Institutional Control databases.

The subject property is part of the Legends Park Subdivision/former Dixie Homes TDEC VOAP site. According to Ms. Alison Campany with the TDEC Division of Remediation, the MHA has entered into multiple BVAs to address impacts to soil, soil gas, and groundwater on various lots within the Legends Park Subdivision that are planned for future residential development and use. Based on the regulatory information reviewed, TDEC Division of Remediation site ID 79-846 (hereinafter referred to as the BVA site) includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient of the site that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Based on TDEC records reviewed, groundwater samples were collected from two sentinel wells (SW-1 and SW-2) on the southwest corner of the BVA site, not on the subject property, between October 2010 and July 2012 for analysis of VOCs. Chlorinated solvent detections exceeded the U.S. EPA drinking water maximum contaminant levels. TDEC records indicate VOC impacts to BVA site groundwater likely originated from historical uses associated with properties farther south.

Because the BVA site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restriction 1) prohibits the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, other than PAHs, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

The 2020 Phase I ESA (EnSafe 2020) identified one subject property address, 335 Decatur Street, in the environmental database for the year 1921. The occupant was listed as Minkie Jos, a former clothes cleaner and presser. No additional information was provided in the 2020 database report; however, it is important to note that historical documents identify a storefront at this address and Minkie Jos may have operated as a dry cleaner. No additional information for this potential prior dry cleaner was identified as part of this Phase I ESA.

4.0 AREA RECONNAISSANCE

The current and historical uses of adjoining and surrounding area properties described below are based upon visual observations during the site reconnaissance and information obtained from interviews, historical research, and regulatory research conducted for the subject property. A commercial environmental database company provided a database search report that made environmental records for surrounding area properties within the ASTM-defined AMSDs reasonably ascertainable. Sites listed in the environmental records search within the ASTM-defined search distances for the databases on which they appear are discussed in Sections 4.1 through 4.3.

4.1 Adjoining Properties

The subject property is adjoined to the north by Peach Avenue then Interstate 40, beyond which are vacant grass-covered parcels and the former Carnes Elementary School; to the east by Decatur Street, beyond which are multi-family residences and Columbus Baptist Church; to the south (from east to west) by a vacant grass lot, Legends Park Townhomes, Delmar Avenue beyond which are Legends Parks Townhomes, Red Sox Lane beyond which is the Legends Park courtyard, and Legends Park Apartments; and to the west by a vacant grass lot which is a portion of the larger parcel encompassing the subject property.

4.1.1 North

The subject property is adjoined to the north, beyond Peach Avenue and Interstate 40, by vacant grass-covered parcels and the former Carnes Elementary School. Based on historical records reviewed, the north-adjoining properties were primarily residential, including a school, as early as 1897 and remained relatively unchanged through the early 1900s. However, a creek or drainage labeled "Run" is shown in the 1897 fire insurance map running through the north-adjoining properties, where Peach Avenue and Interstate 40 are present day, but this stream does not appear in subsequent records. The 1937 aerial photograph shows residential structures associated with the former Dixie Homes in the current location of Peach Avenue and Interstate 40, and it also shows two large buildings and numerous smaller buildings farther north. The 1951 fire insurance map shows primarily residential buildings, a church, and school buildings (the Former Carnes Elementary School) on the north-adjoining properties. The fire insurance map indicates that the school buildings were constructed in 1920, 1939, and 1944. The north-adjoining properties appear relatively unchanged until construction of Interstate 40 and the rerouting of Peach Avenue between 1969 and 1973. Except for the former Carnes Elementary School and associated additions, the north-adjoining properties beyond Interstate 40 remain either residential or vacant grass-covered lots.

No environmental records were identified for the north-adjoining properties.

4.1.2 East

The subject property is adjoined to the east, beyond Decatur Street, by multi-family residences and Columbus Baptist Church. Based on historical records reviewed, the east-adjoining properties were residentially developed as early as 1897. A church is depicted on the 1907 fire insurance map. City directories list primarily residential addresses for the east-adjoining properties from at least 1932 until 2005 and Columbus Baptist Church from at least 1940 to 2011.

No environmental records were identified for the east-adjoining properties.

4.1.3 South

The subject property is adjoined to the south (east to west) by a vacant lot, Legends Park Townhomes, Delmar Avenue beyond which are Legends Parks Townhomes, Red Sox Lane beyond which is the Legends Park courtyard, and Legends Park Apartments. Based on historical records reviewed, the south-adjoining properties were primarily residential with some shops as early as 1897 and 1907. The 1927 topographic map shows numerous small structures on the south-adjoining property, and by 1937 the property is redeveloped with residential structures associated with the former Dixie Homes. Based on historical records reviewed, the south-adjoining properties remained residential until 2007 when the area was cleared for redevelopment. The 2010 aerial photograph shows an apparent storm water detention basin on the western part of the south-adjoining property. The 2012 aerial photograph shows the detention basin has been filled, likely when the Legends Park Apartments were constructed. According to Ms. Phillips, the Legends Park Townhomes were constructed in 2009.

The south-adjoining properties are within the Legends Park Subdivision VOAP/BVA site as previously discussed in Section 3.6.

Gordon Cleaners and Dyers, at 311 Decatur Street, was identified as a former clothes cleaner and presser in the 1932 historical city directory obtained for the February 2022 Phase I ESA. No additional information was identified in historical and database resources obtained for this Phase I ESA; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907 and Gordon Cleaners and Dyers may have operated as a dry cleaner.

4.1.4 West

The subject property is adjoined to the west by a vacant grass lot that is the west portion of Shelby County Parcel 051017 00018, which includes the subject property. Based on historical records reviewed, the west-adjoining property was previously developed with multi-family residential lots as early as 1897. The 1907 fire insurance map and 1927 topographic map show numerous small structures on the west-adjoining property, with an area clear of structures on the west side. The 1937 aerial photograph shows at least two residential structures associated with the former Dixie Homes on the east half of the west-adjoining property, while the west half is clear of structures. The 1951 fire insurance map indicates the west portion of the west-adjoining property is a playground. Based on historical records reviewed, the west-adjoining property remained a residential and playground/park area until 2007 when the area was cleared for redevelopment. The 2010 aerial photograph shows an apparent storm water detention basin on the west-adjoining property. The 2012 aerial photograph shows the detention basin has been filled and the west-adjoining property is a vacant grass-covered area. According to Ms. Payne, the west-adjoining property was used to stockpile soil from the Legends Park Subdivision construction and environmental activities occurring from 2009 to 2012.

The west-adjoining property is located within the Legends Park Subdivision VOAP/BVA site as previously discussed in Section 3.6. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjoining property. In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants remaining in the soil, an orange plastic witness barrier was placed over impacted soil, then covered with at least 2 feet of clean fill material, between June and October 2010.

4.2 Surrounding Area Properties

The subject property is on the northeast side of downtown Memphis. The surrounding properties have been developed with residential, commercial, and light industrial properties since at least 1897. The environmental database search identified a total of 38 sites beyond the subject property and adjoining properties. Of these sites, 11 are within the ASTM-defined AMSDs; additionally, six sites not listed on the environmental database report were identified in the prior 2020 and 2022 Phase I ESAs. The 17 sites identified within the ASTM-defined AMSDs are summarized in Table 4.

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Memphis Bulk Plant	432 North Dunlap Street	0.25 mile northwest	LUST, VCP, and SRP	790769 and 799001	Closed, Land Use Restrictions	• Petroleum constituents detected in soil, soil gas, and groundwater. • Groundwater flows generally to the west. • Site-specific standards issued • TDSWM approves closure with land-use restrictions in 2005.	Not expected to migrate to subject property based on groundwater flow direction
Southern Steel	431 Dunlap Street	0.28 mile northwest	VCP, SRP, and Institutional Controls	791072	No Further Action	• Petroleum constituents detected in soil. VOCs and SVOCs detected in groundwater. • TDSWM approves closure with land-use restrictions in 2009.	Not expected to migrate to subject property based on site regulatory status and groundwater flow direction
Church's Fried Chicken	925 Poplar Avenue	0.26 mile south-southwest	VCP and SRP	790379	Inactive, No Further Action	• Petroleum impacts in soil and shallow groundwater. • Groundwater flow reported to the north/northwest. • SRP issued no further action required for petroleum impacts on March 1, 2011.	Not expected to migrate to subject property based on site regulatory status and groundwater flow direction
Le Bonheur Hospital/Memphis Mental Health Institute	865 Poplar Avenue	0.28 mile southwest	VCP and SRP	792714 and 791119	Closed	• EPH detected in soil samples. • SRP issued no further action required status on November 17, 2009.	Not expected to migrate to subject property based on contamination being limited to soils and distance to subject property
VA Medical Center	1030 Jefferson Avenue	0.25 mile south	SEMS and LUST	TNN000410932 and 790807	Closed	• One UST was removed in December 1998; TDEC DUST issued closure on November 5, 1999.	Not expected to have had contamination that migrated to subject property based on regulatory status and distance from subject property

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
University Behavioral	135 North Pauline	0.33 mile south	LUST	791029	Case Closure	• One 2,000-gallon diesel UST and associated piping were removed in January 1999. • Soil detections below applicable action levels. • TDEC DUST issued case closure on July 1, 1999.	Not expected to have had contamination that migrated to subject property based on soil analysis and regulatory status
Amoco/ Poplar Avenue BP	821 Poplar Avenue	0.38 mile southwest	LUST	791083	Case Closure	• Petroleum impacts identified in soil and groundwater. • TDEC DUST issued contaminated case closure on August 28, 2015.	Not expected to migrate to subject property based on distance from the subject property and groundwater flow direction
Success Cleaners	1000 Jefferson Avenue	0.41 mile south	SRP	79867	Non-site	• Site identified along with Memphis Steam Laundry & Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files from 2018 indicate the site is to be considered a "non-site" until impacts are recognized.	Potential for contamination to have migrated to the subject property based on possible drycleaning operations and groundwater flow direction
Auto-Chlor System	746 Poplar Avenue	0.43 mile southwest	LUST, VCP, and SRP	790057, 79774, and 791083	Closed	• Petroleum hydrocarbon, VOC, and PAH impacts in soil and groundwater • Radial groundwater flow to the northwest, northeast, and southwest. • TDEC DOR issued no further action with land-use restrictions on October 26, 2016.	Potential for contamination to have migrated to the subject property based on groundwater analysis and flow direction

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Spic N Span	813-815 Poplar Avenue	0.41 mile southwest	SRP and DCERP	79217	Closed	• Benzene, PCE, TCE, vinyl chloride, and 1,2-dichloroethylene were detected in groundwater above applicable action levels and benzene, PCE, and 1,2-dichloroethylene were detected in soil below applicable action levels. • DCERP authorized closure on November 13, 2007.	Not expected to migrate to the subject property based on distance from the subject property, regulatory status, and groundwater flow direction
Memphis Steam Laundry and Cleaners	941 Jefferson Avenue	0.41 mile south-southwest	SRP	79855	Open	• Site identified along with Success Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files indicate a schedule for a sampling event was proposed for June 2009; however, records reviewed do not indicate if the event took place. At the time of this report's writing, the site is listed as "Pre-Remedial".	Potential for contamination to have migrated to the subject property based on possible drycleaning operations and groundwater flow direction
Extra Express Market/ 7-Eleven/ Flash Oil Co #72	777 Poplar Avenue	0.42 mile southwest	LUST	791539	Contamination Case Closed	• Petroleum contaminated soil and groundwater identified. • TDEC DUST issued case closure on May 9, 2018.	Not expected to migrate to the subject property based on distance from the subject property, regulatory status, and groundwater flow direction

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Air Mask Service Unit	1010 Faxon Avenue	0.43 mile north	LUST	791109	Completed Tank Closure	• One 500-gallon diesel UST and associated piping drained and capped in September 1991. • Soil sample results collected from tank pit were non-detect or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on February 26, 1996.	Not expected to migrate to subject property based on contamination being limited to soils, distance to subject property, and groundwater flow direction
The Med Adam's Building	842 Jefferson Avenue	0.45 mile south-southwest	LUST	792354	Contamination Case Closed	• One 20,000-gallon UST and associated piping drained and capped in July 1999. • TDEC DUST issued case closure on February 6, 2002.	Not expected to have had contamination that migrated to the subject property based on regulatory status
Le Bonheur Faculty Office Building	824 Adams Avenue	0.46 mile southwest	LUST	799039	Completed Tank Closure	• One 1,000-gallon UST, one 500-gallon UST, and piping were removed in August 2015. • Soil samples collected from tank pit non-detect or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on August 18, 2015.	Not expected to have had contamination that migrated to the subject property based on soil analysis
Former Scott Union	749 North Parkway	0.47 mile northwest	LUST	790606	Contamination Case Closed	• Four 4,000-gallon and one 500-gallon USTs removed in February 1993. TDEC DUST issued case closure on May 13, 1993. • Release identified during Phase II in January 2000; impacted soils excavated; TDEC DUST issued case closure on September 13, 2000.	Not expected to have had contamination that migrated to the subject property based on soil analysis and groundwater flow direction

Super Stop	945 Jackson Avenue	0.49 mile north	LUST	791890	Contaminated Closure	• Three USTs removed in August 1997. • TDEC DUST issued contaminated closure on October 2, 2000.	Not expected to migrate to the subject property based on distance from the subject property and groundwater flow direction

Notes:
LUST = Leaking Underground Storage Tank
VCP = Voluntary Cleanup Program
SRP = State Remediation Program
TDSWM = Tennessee Division of Solid Waste Management
VOC = volatile organic compound
SVOCs = semi-volatile organic compounds
EPH = Extractable petroleum hydrocarbon
SEMS = Superfund Enterprise Management System
UST = Underground storage tank
TDEC = Tennessee Department of Environment and Conservation
DUST = Division of Underground Storage Tanks
PCE = Tetrachloroethylene or perchloroethylene
PAH = Polyaromatic hydrocarbon
DOR = Division of Remediation
DCERP = Drycleaner Environmental Response Program
TCE = Trichloroethylene

4.3 Unmapped Sites

The environmental database search identified four sites with environmental records which it could not map due to poor or inadequate address information. Based on location information included in the database listings, online mapping tools, and from Ms. Alison Company, each site was determined to be beyond the ASTM-defined AMSDs for the databases on which it was listed and was not researched further.

5.0 RESULTS OF THE ENVIRONMENTAL PROFESSIONAL INQUIRY

EnSafe performed a Phase I ESA of the Block A of the Legends Park Subdivision property in Memphis, Shelby County, Tennessee, in general conformance with the scope and limitations of ASTM 2013. Any exceptions to, or deletions from, this practice mentioned throughout the report are discussed in Sections 5.3 and 5.4.

5.1 Summary of Findings and Conclusions

- The subject property consists of 3.82 acres of a larger 4.77-acre vacant parcel identified as Shelby County Parcel 051017 00018 and is located within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). The subject property is adjoined to the north by Peach Avenue then Interstate 40; to the east by Decatur Street then multi-family residences and a church; to the south by multi-family townhomes, Red Sox Lane, and apartment buildings; and to the west by a portion of the vacant larger parcel.

- The subject property has been developed since at least 1897 with single and multi-family residential buildings. The subject property was part of the former Dixie Homes public housing development from 1937, until 2006 when the area was cleared for redevelopment as the Legends Park Subdivision.

- The BVA Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include: 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restrictions 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in environmental database records and historical city directories for the year 1921. No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information was identified in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners and Dyers may have operated as a dry cleaner.

- The west and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjoining property. In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants, the soil is contained beneath an orange witness barrier and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored regulated materials including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products. One of these sites, Memphis Steam Laundry and Cleaners at 941 Jefferson Avenue, has potential for contamination to have migrated to the subject property.

- Five soil gas samples were collected throughout the subject property in 2021. Benzene and naphthalene were detected at concentrations exceeding the U.S. EPA residential VISLs in one sample location (SG01) on the southeast portion of the subject property. Additionally, concentrations in the sample from location SG01 exceeded the acceptable residential carcinogenic risk quotient of 1E-05 with a result of 1.20E-05. The planned construction of a new building at the subject property is not in the vicinity of SG01; however, the intended use of the subject property and location of future structures will dictate further recommendations for soil vapor mitigation.

5.2 Environmental Professional Opinion

This assessment has revealed evidence of the following *recognized environmental condition* and *controlled recognized environmental condition* in connection with the subject property:

- BVA Site ID 79-846 includes the subject property and adjoining properties west and south of the subject property. The BVA outlines environmental conditions identified upgradient of these properties that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property.

- The subject property is subject to land sea restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*.

5.3 Data Gaps

No data gaps were encountered that limited EnSafe's ability to identify *recognized environmental conditions*.

5.4 Limitations and Exceptions

EnSafe's Phase I ESA generally conforms to ASTM 2013. EnSafe did not sample soil, soil vapor, groundwater, or surface water as part of the Phase I ESA. Assessment of these items is based upon visual observations and sources as referenced throughout the report. This report should not be construed as verifying the present property owner or operator's compliance with federal, state, and local regulations or as a recommendation to purchase, sell, or develop the subject property.

5.5 Significant Assumptions

This report is a prudent, reasonable evaluation of the subject property's observed environmental condition. EnSafe assumes no responsibility for conditions or information not practically reviewable, or information not accurately disseminated by any party. The following significant assumptions were used to formulate the conclusions and opinions contained in this report:

- Groundwater flow generally follows topography.
- Environmental database information is accurate and complete.
- Conditions at the time of the site visit were representative of ordinary conditions at the subject property.
- The subject property boundaries depicted on figures and described herein are accurate.

5.6 User Reliance

The assessment was prepared under contract for the exclusive use of PennRose. Any other party's reliance on this report is at risk unless EnSafe grants authorization. In accordance with ASTM 2013, this Phase I ESA is presumed to be valid for 180 days from the date of completion. A Phase I ESA that meets or exceeds this practice and was completed more than 180 days previously may be used to the extent allowed in Sections 4.7 and 4.8 of ASTM 2013.

Appendix B
Resumes

ALLISON HARRIS, PG
Senior Geologist

EDUCATION

MS, Geology, University of Memphis, 1990

BS, Geology, University of Memphis, 1986

REGISTRATIONS

- Tennessee Professional Geologist, No. 788, 1989
- OSHA 1910.120 Health and Safety Training, including medical surveillance
- First aid and CPR certified, 2016

Allison has 29 years of experience in a variety of environmental programs. She is the project manager for multiple sites including Security Signals, an operable unit of the larger National Fireworks site where ammunitions were manufactured during World War II. As project manager, Allison is responsible for all aspects of this Superfund-Equivalent site. She ensures compliance with the Administrative Order of Consent, works closely with Tennessee Department of Environment and Conservation (TDEC) and USEPA regulators, and negotiates access agreements with offsite property owners. The investigation is being performed in phases to provide a cost-effective approach for the client and to allow for flexibility based on investigation findings. Known contamination includes trichloroethylene (TCE); suspected contaminants included perchlorate and various explosives.

RELEVANT EXPERIENCE

SUPERFUND PROJECTS

Remedial Investigation/Feasibility Study, US Navy, Naval Air Station (NAS) Pensacola, FL (2012-2018)

As task order manager, responsible for preparing remedial investigation/ feasibility study (RI/FS) planning documents, including Sampling and Analysis Plans, Investigation-Derived Waste (IDW) Plan, Proposed Plans, Records of Decision, and a Community Relations Plan. Other documents under her responsibility include RI Reports, Baseline Risk Assessments including Ecological Risk Assessments, FS Reports, and Site Characterization Reports. Managed CERCLA multi-phased field investigation of a 5.5-mile industrial waste sewer line including RCRA clean-closure of the industrial sewer line. The sewer line investigation included overseeing temporary and permanent monitoring well installations, monitoring well abandonment, and groundwater and soil sampling. This project was conducted under the Comprehensive Long-term Environmental Action Navy (CLEAN) program with USEPA Region 4 and the Florida Department of Environmental Protection (FDEP). Additional responsibilities included community relations activities, including establishing a Restoration Advisory Board and producing news releases, fact sheets, and public notices. Managed multidisciplinary staff from three separate offices. Specific project management responsibilities included proposal preparation, budgeting, cost tracking, invoicing, report generation, and client/agency liaison. Work performed at NAS Pensacola has earned one Secretary of the Navy and two Chief of Naval Operations awards.

TCE Remediation, Former ITT Telecomunications Facility, Milan, TN (2005-present)

Project manager for a chlorinated solvent investigation at an inactive facility contaminated by TCE and its breakdown products. The mile-long groundwater plume had previously impacted multiple private drinking water wells. Activities completed for the site include a focused FS evaluation of the source area and a human health risk assessment. National Contingency Plant (NCP) consistency activities included completing an Administrative Record, issuing a proposed plan and placing public notices announcing the comment period, and completing a Community Involvement Plan. The pilot test of an air sparge system determined that the system would be technically effective as well as cost-effective for the site, despite the great depth to groundwater.

Groundwater Monitoring, LaRoche Industries, Inc., Memphis, TN (2005)

Project manager for an RI/FS at a site investigated under the TDEC Division of Superfund. Responsibilities include assessment of an ongoing interim action for groundwater, finalizing the RI/FS report, monitoring well

installation, and groundwater sampling. This site was removed from the Tennessee Superfund list in November 2005.

Remedial Investigation/Feasibility Study, Tennessee Electroplating, Inc., Ripley, TN (2005)

Project manager for an RI/FS site being conducted under the TDEC Division of Superfund voluntary program. The investigation included delineating the extent of contamination in groundwater using direct-push technology (DPT), installing confirmation monitoring wells, and collecting soil and groundwater samples. Other responsibilities included completing a work plan, evaluating site data, negotiating with TDEC, and completing an RI/FS report.

BRAC Program Closure Investigation, US Navy, NAS Glenview, IL (2012)

As project geologist for Base Realignment and Closure (BRAC) program closure investigation at NAS Glenview, assisted with the field investigation and completed the RI/FS work plan. The investigation was conducted in accordance with CERCLA under the Navy's CLEAN program. Also coordinated the Administrative Record file for the facility. The Illinois Environmental Protection Agency and USEPA Region 5 were the regulatory agencies involved in the investigation.

Soil Sampling, Barmet Aluminum, Fort Hartford, KY (2016)

As project geologist responsible for logging and collecting soil samples from borings advanced across the site.

Subsurface Investigation, Amoco Corp. and Helena Chemical Co., Hayti, MO

This investigation included advancing soil borings for subsurface soil collection and installing onsite monitoring wells. Conducted onsite soil, sediment, and groundwater sampling and also assessed the presence of earthquake-induced liquefaction features at the facility. Compiled information and analytical data and wrote the report in accordance with a USEPA order. Met all USEPA deadlines for the report.

*Superfund Site, Waste Management Landfill, Anoka, MN (1991)

As project geologist for monitoring well and recovery well installations and soil boring investigation at this State of Minnesota Superfund site, responsible for overseeing subcontractors and completing boring logs of the complicated glacial lithology and bedrock.

CHLORINATED SOLVENT PROJECTS

Chlorinated Solvent Investigation, Bass, Berry & Sims, West Tennessee (2008)

Project geologist for a chlorinated solvent investigation at this active West Tennessee facility. This site has many challenges including complex geology, presence of dense non-aqueous-phase liquid (DNAPL), and an adjacent municipal wellfield. The investigation included advancing soil borings, installing onsite and offsite monitoring well nests, collecting soil and groundwater samples, performing a hydrogeologic investigation, and disposing of IDW.

Interim Remedial Action, former Spic N Span Cleaners, DCERP Project, Memphis, TN (2014-2016)

As project geologist, managed and conducted interim remedial action at this Dry Cleaner Environmental Response Program (DCERP) site in Memphis that is also under the Brownfields program. Work included injecting emulsified soybean oil into the source area. Duties included subcontractor selection and management and liaison with DCERP personnel. Project management included submitting reports to the state for approval and completing reimbursement applications for state payment.

PETROLEUM PROJECTS

Underground Storage Tank Investigation, Naval Support Activity Mid-South, Millington, TN (2007)

Task order manager for an underground storage tank (UST) investigation. The investigation included advancing soil borings using hollow-stem auger and DPT techniques, installing monitoring wells, collecting soil and groundwater samples, and disposing of IDW. Authored a contamination assessment report for the site. Because chlorinated solvent contamination was also detected onsite, the site was transferred to another program.

Underground Storage Tank Investigation, Carrier Corp., Brondby, Denmark (2009)
As project geologist for a UST investigation to assess whether the tank was leaking. Subsurface soil was assessed by advancing soil borings around the tank and collecting soil samples from beneath the tank. Authored a report detailing the investigation.

Underground Storage Tank Field Investigations, US Navy, NAS Kingsville, TX (2016)
Project geologist for field investigations at three UST sites. The field investigations included a soil-gas survey, soil boring advancement, monitoring well installation, and soil and groundwater sample collection. Authored a Contamination Assessment Report for one of the sites.

*Investigation and Remedial Activities, Clark Oil, Various Facilities in Minnesota (1991)
Project geologist for site investigations and remedial activities for various UST sites. Assimilated raw field data and analytical data into final technical reports. Also completed applications for the client to seek reimbursement from the state's Petrofund. Specific field experience included advancing soil borings, installing monitoring wells, organizing and supervising UST excavation and disposal, coordinating and monitoring contaminated soil excavation and disposal, onsite soil disposal, soil and groundwater sampling, and installation and maintenance of groundwater recovery and treatment systems.

*Tank Closures, Site Investigations, Remedial Activities, Ryder Truck Rental, Various Facilities in Florida, Wisconsin and Illinois (1991)
Project geologist for tank closures, site investigations, and remedial activities for six UST sites. Assimilated raw field data and analytical data into final technical reports in accordance with the applicable state regulations.

RCRA PROJECTS

Environmental Investigation, Lucite International, Olive Branch, MS (2010)
Project manager for investigation completed for two solid waste management units at this active facility. Authored work plan, coordinated field investigation, and authored final report. This facility received a no-further-action status upon completion of this investigation.

Naval Support Activity Mid-South, Millington, TN (2007)
Authored a RCRA Facility Investigation Report for a solid waste management unit at this facility undergoing realignment. This project was conducted under the Navy's CLEAN program with USEPA Region 4 and TDEC.

Comprehensive Sampling and Analysis Plan, Charleston Naval Shipyard RFI, Charleston, SC (2012-2013)
Assisted in preparing the RCRA Facility Assessment comprehensive work plan for the facility. Wrote the Comprehensive Sampling and Analysis Plan for field activities to be performed during the investigation.

BROWNFIELDS

Site Investigation, Memphis Biofuel, Memphis, TN (2007)
Project manager for site investigation at a former chemical manufacturing facility. The investigation included soil and groundwater sampling. Areas of identified toxaphene contamination in soil were managed under a Soil Management Plan. The Brownfields agreement was subsequently signed with the plan included as an appendix.

Site Investigation, Z-Mart, Memphis, TN (2002)
Project manager for site investigation at a former petroleum UST site. The site was proposed for inclusion in a Brownfields agreement for redevelopment with two other properties. After completing the investigation, managed the completion of the Removal Action Work Plan for the identified soil contamination. The plan was approved by TDEC with minimal comments. A Demolition Plan completed for the onsite building accounted for handling of contaminated materials that was encountered at the site. The building was demolished and a successful soil removal action was performed.

Site Investigation, Mid-South Nephrology Clinic, Memphis, TN (2005)
Project manager for site investigation at a former automatic transmission shop and cleaners site. The site was proposed for inclusion in a Brownfields agreement for redevelopment. The investigation included soil and groundwater sampling using DPT to delineate the nature and extent of contamination.

SOLID WASTE

*Soil Boring Investigation, Laidlaw Sanitary Landfill, Terra Haute, IN (1990)

Project geologist for monitoring well installations and soil boring investigation.

*Groundwater Monitoring System Work Plan, Northeast Otter Tail County Sanitary Landfill, New York Mills, MN (1991)

Hydrogeologist for the Northeast Otter Tail Sanitary Landfill. Authored a Groundwater Monitoring System Work Plan in accordance with Minnesota Solid Waste Rules.

SITE ASSESSMENTS

Property Transfer Investigation, Wright Medical, Arlington, TN (2006)

Project manager for a fast-track investigation of a potential property transfer. Investigation included DPT sampling of soil and groundwater, trenching of anomalies identified during a geophysical survey, and sediment sampling. Project was completed in approximately 30 days and met all of the client's objectives and data needs.

Hazardous Materials Sampling, Guardian Industries, Various Facilities in Tennessee, Missouri, and Arkansas (2008)

Project manager for a fast-track investigation of a potential stock transfer at various automotive manufacturing facilities. Investigation included DPT sampling of soil and groundwater and asbestos sampling. Project was completed in approximately 30 days and met all of the client's objectives and data needs.

Phase I Environmental Site Assessments, Great Smoky Mountain National Park, Gatlinburg, TN (2005)

Project manager for two Phase I Environmental Site Assessments (ESAs) as related to the Tapoca Land Exchange. One of the ESAs was completed for an area of approximately 110 acres, while the second area was approximately 281 acres. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessment, National Park Service, St. John U.S. Virgin Islands (2001)

Project manager for a Phase I ESA for a 375-acre tract. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I and II ESAs, National Park Service, Stones River National Park, Murfreesboro, TN (2001)

Project manager for Phase I and II investigations completed on two tracts being considered for purchase by the National Park Service. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessments, Bass, Berry & Sims, Alabama and Indiana (2006)

Project manager for Phase I ESAs completed on property considered for purchase by the client. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessment, Bass, Berry & Sims, Arkansas (2006)

Project manager for Phase I ESA completed on property considered for purchase by the client. The property was a former tie manufacturing facility. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I and II Site Investigations, Bass, Berry & Sims, La Mirada, CA (2005)

Project manager for Phase I and II investigations completed on property considered for purchase by the client. Phase II activities included monitoring well installation, soil sampling, and groundwater sampling. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, client liaison, and coordinating with other parties' consultants.

Phase I Environmental Site Assessments, Performance Food Group, Various Sites in Illinois, Mississippi, and Arkansas (2005)

Project manager for Phase I ESA completed on property considered for purchase by client. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

TRACE HILBURN
ENVIRONMENTAL SCIENTIST/GEOLOGIST

EDUCATION
BS-Bachelor of Science, Professional Geology, Mississippi State University, 2020

REGISTRATIONS & CERTIFICATIONS

YEARS EXPERIENCE:
2 years

TECHNICAL EXPERTISE

AFFILIATIONS/ ORGANIZATIONS

Trace is building ever-increasing responsibilities in data collection, soil and water sampling, wastewater testing, and maintenance and calibration of lab equipment. His project experience includes testing soil samples for Hexavalent Chromium, as well as checking the Bioavailable Oxygen Demand for waste and stormwater for the city of Memphis and various clients in the surrounding area.

RELEVANT EXPERIENCE

Bluff City_Former MA Industries Gulf Stream Road Phase II Environmental Site Assessment_Arlington TN, Bluff City, LLC, Arlington, TN (2022-2022)
As a Field Geologist, Trace was the primary collector of surface soil samples using a hand auger. He also assisted in getting PID readings from soil boring samples and collected groundwater samples from temporary wells installed on site.

HELENA-West Helena Rem Action Desgn, Helena Agri-Enterprises, LLC, Helena-West Helena, AR (2016-2021)
As a Geologist, Trace assisted Griffin in getting coolers ready for a large groundwater sampling event in West Helena, AR. With over 30 wells being sampled, each with their own set of analytes to be tested for and all samples being split between four different analytical laboratories; each sample cooler was set up to contain all the sampling containers needed for each well. Trace then assisted Dave in delivering the coolers and sampling equipment to the job site.

Kilgore Flares_Hazardous Waste Open Burn Area Semi-Annual Groundwater Sampling_Toone TN, Kilgore Flares Company, LLC, Toone, TN (2021-2022)
As a Geologist, Trace helped collect groundwater samples from three monitoring wells three times a week for four weeks. Trace would then deliver samples to a lab to be analyzed for Benzo(a)anthracene, Dibenz(a,h)anthracene, and Indeno(1,2,3-cd)pyrene.

TMX-(Schendel)-Property Exit Assessment-Wichita, KS, Terminix Global Holdings, Inc., Wichita, KS (2022-2022)
As an Environmental Scientist, Trace visited a Terminix Branch that was moving their operations to another location. Trace observed the location that was being left and wrote an Exit Assessment report for the client. The report included observations made during the site visit as well as professional recommendations on how the client should handle any remaining cleaning before they move out.

STJUDE- Phase I ESA 2022- Beagle Club, Memphis, TN, St. Jude Children's Research Hospital, Williston, TN (2022-2022)
As an Environmental Scientist, Trace assessed a property on behalf of St. Jude for any recognized environmental conditions and business environmental risks on a property that was being donated to them.

Memphis Housing Authority_Overton Park Ave and Bellevue Blvd Supplemental Sampling_Memphis TN, City of Memphis, Memphis, TN (2022-2022)
As a Geologist, Trace supervised the development of a temporary well and analyzed soil borings. Soil samples were taken at preselected intervals to test for different volatiles. Trace helped deliver the soil samples to a lab for analysis.

WNJ-HECO RD/RA DyersburgTN, Warner Norcross & Judd LLP, Dyersburg, TN (2020-2021)

As a Geologist, Trace assisted in the Building 3 Shallow Source Investigation sampling event. Trace analyzed soil borings and groundwater samples for volatiles. He helped test the samples in situ and prepared samples to be tested in a lab. Trace also assisted in digitizing the boring logs recorded during the sampling event and compiled soil and groundwater lab results in tables for the report.

TMX-Property Exit Assessment-Wichita, KS, Terminix Global Holdings, Inc., Wichita, KS (2022-2022)

As an Environmental Scientist, Trace visited a Terminix Branch that was moving their operations to another location. Trace observed the location that was being left and wrote an Exit Assessment report for the client. The report included observations made during the site visit as well as professional recommendations on how the client should handle any remaining cleaning before they move out.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Complaint

Complaint No: 46636
Assigned Date: FEB-23-2018
Date Received: FEB-02-2018
How Received: Phone
Concerning: Used Oil
Concering (Other):

Investigation

Status: NOV
Status Detail: Area where engines are pulled had some staining on the ground as well as a few puddles of antifreeze from incidental spillage. Once engines and transmissions are removed they are drained into an oil tank inside the building and used to power a used oil heater. Owner agreed to move the rack onto a concrete surface, remove the stained soil and institute procedures to minimize and contain spillage. An NOV will be sent.
NOV mailed 3/7/18

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Nov 23, 2022

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Nov 23, 2022

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Sep 5, 2022

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Sep 5, 2022

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Sep 5, 2022

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Sep 5, 2022

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Sep 5, 2022

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Jul 26, 2022

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 6, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Nov 23, 2022

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Sep 28, 2022

State

Promulgated Sites: SHWS

The Promulgated List made available by Tennessee's Department of Environment and Conservation (TDEC) is a List of Inactive Hazardous Substance Sites. 'Inactive hazardous substance sites that constitute an imminent, substantial danger' is an inactive hazardous substance site where there is a threat of danger to the public health, safety, or environment which is both real and presently existing. This database is state equivalent NPL.

Government Publication Date: Sep 20, 2022

Delisted State Hazardous Waste Sites: DEL SHWS

This database contains a list of sites which have removed from The Promulgated Sites Listing maintained by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Sep 20, 2022

Solid Waste Disposal Facilities and Landfills: SWF/LF

A list of permitted solid waste and landfill facilities made available by Tennessee's Department of Environment Conservation (TDEC).

Government Publication Date: Nov 9, 2022

Environmental Activities on USTs: LUST

The Tennessee Department of Environment and Conservation (TDEC) has made available a list of facilities where any type of environment-related activity has occurred due to a tank closure, or a suspected or confirmed release. The information in this list includes the facility's name and address when the environmental activities began, and the as well as the current status of the activities taking place.

Government Publication Date: Oct 28, 2022

Tennessee Petroleum Underground Storage Tank Fund: LUST TRUST

A list of facilities which have applied for reimbursement from the Tennessee Petroleum Underground Storage Tank Fund, made available by Tennessee Department of Environment and Conservation (TDEC).

Government Publication Date: Oct 28, 2022

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of leaking storage tank sites and their Funds for reimbursement of costs related to assessment and cleanup that were removed from the Department of Environment and Conservation (TDEC) database.

Government Publication Date: Oct 28, 2022

Hazardous Waste Remedial Action Fund: HWRA

List of sites under the Hazardous Waste Remedial Action Fund (HWARF) program, maintained by Tennessee Department of Environement and Conservation (TDEC). The Division of Remediation uses the Fund to investigate and cleanup environmental problems caused by the release of hazardous substances into the environment.

Government Publication Date: Sep 20, 2022

Delisted Hazardous Waste Remedial Action Fund: DHWR

List of sites which once appeared on - and have since been removed from - the list of sites participating in the Hazardous Waste Remedial Action Fund, made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Sep 20, 2022

Underground Storage Tanks: UST

A list of tank compartments that have been reported to the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). Some of the compartments listed, are not regulated by state or federal regulations, because of the substance stored, the size of the compartment, its use, etc. This list is maintained by Tennessee Division of Underground Storage Tanks in DEC.

Government Publication Date: Oct 28, 2022

Delisted Storage Tanks: DEL STORAGE TNK

List of tank compartments is maintained by the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). The department would remove a record if the compartment is not regulated. This list contains the non-regulated tank compartments that been removed from the department's tank database.

Government Publication Date: Oct 28, 2022

Sites Remediated with Institutional Controls: INST

List of remediated sites that have institutional controls in place. This list has been made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Sep 20, 2022

Sites Remediated with Engineering Controls: ENG

This list made available by Tennessee's Department of Environment and Conservation (TDEC) is comprised of remediated sites that have engineering controls.

Government Publication Date: Sep 20, 2022

Voluntary Cleanup, Oversight and Assistance Program: VCP

The Voluntary Cleanup Oversight and Assistance Program (VOAP) overlooked by Tennessee's Department of Environment and Conservation (TDEC) offers people the opportunity to work proactively with state government to address necessary cleanup of a property to return it to productive use. In return for their efforts, participants can receive a No Further Action letter and a release of liability for areas where investigation and cleanup is conducted. This list is maintained by the Division of Remediation in Department of Environment and Conservation.
Government Publication Date: Sep 20, 2022

State Remediation Program List: SRP
The State Remediation Program (SRP) was established in 1994 within the Division of Solid Waste Management of the Department of Environmental Conservation (DEC) for the purpose of providing owners, prospective purchasers and other interested parties the means to voluntarily investigate, clean up or monitor contaminated sites not regulated under RCRA, CERCLA or the Tennessee Division of Underground Tanks (UST). This list maintained by Department of Environment and Conservation, Division of Solid waste Management - Site Remediation Program.
Government Publication Date: Sep 20, 2022

Division of Remediation Sites: REMEDIATION
List of remediation sites that are or have been under any of the program in Division of Remediation, Tennessee's Department of Environment and Conservation, including VOAP, DCERP, SRP, etc.
Government Publication Date: Sep 20, 2022

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST
LUSTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no LUST records in Tennessee at this time.
Government Publication Date: Apr 12, 2019

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST
USTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no UST records in Tennessee at this time.
Government Publication Date: Oct 14, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST
Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.
Government Publication Date: Oct 14, 2022

Delisted Tribal Underground Storage Tanks: DELISTED IUST
Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.
Government Publication Date: Oct 14, 2022

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Drug Establishment Annual Registration: FDA REGISTRANT
A list of drug firms which manufacture, prepare, propagate, compound, or process drugs that are commercially distributed in the U.S. or offered for import to the U.S. Listing made available by the U.S. Food and Drug Administration (FDA). Includes historical records dating back to 2000. Includes only facilities which are located in the U.S.A.
Government Publication Date: Apr 9, 2019

Risk Management Plan (RMP) Rule: RMP
A list of facilities that are required to have a Risk Management Plan (RMP) in order to: identify the potential effects of chemical accidents, identify steps to prevent accidents and provide emergency response procedures should an accident occur. This list is provided by the EPA which is required by the Clean Air Act Amendments to publish regulations and guidance on chemical accident prevention.
Government Publication Date: Feb 1, 2022

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites: PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Oct 4, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills: ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Aug 30, 2022

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Nov 23, 2022

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Civil Enforcement Action Cases without Associated Facilities: CEA2

This database consists of civil, judicial, and administrative federal enforcement cases where there are no facilities associated with a case as tracked by the U.S. Environmental Protection Agency's (EPA). The EPA's Enforcement and Compliance History Online (ECHO) system incorporates Federal Enforcement and Compliance (FE&C) data from the Integrated Compliance Information System (ICIS). ICIS tracks enforcement actions taken against companies or individuals; therefore, the ICIS case name may not correspond to an exact facility name for ICIS records linked via EPA's Facility Registry System (FRS), ECHO Facility Searches, or other program data systems.

Government Publication Date: Oct 8, 2022

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Oct 10, 2022

Integrated Compliance Information System for Air: ICIA

ICIS-Air contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners (automobiles and other mobile air pollution sources are tracked by a different EPA system). ICIS-Air records included in the download files are those where the operating status is planned (has applied for a construction permit), under construction, operating, temporarily closed, seasonal, or permanently closed. This is provided by the EPA.

Government Publication Date: Jul 2, 2022

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Sep 15, 2022

Occupational Safety and Health Administration Enforcement Data: OSHA

This dataset includes information regarding the impetus for conducting the inspection, and details on citations and penalty assessments resulting from violations of OSHA standards. Additionally, accident investigation information is provided, including textual descriptions of the accident, and details regarding the injuries and fatalities which occurred. Provided by the US Department of Labor.

Government Publication Date: May 12, 2022

Civil Enforcement Actions: CEA

This database consists of civil, judicial, and administrative federal enforcement cases tracked by the U.S. Environmental Protection Agency's (EPA). The EPA's Enforcement and Compliance History Online (ECHO) system incorporates Federal Enforcement and Compliance (FE&C) data from the Integrated Compliance Information System (ICIS). ICIS tracks enforcement actions taken against companies or individuals; therefore, the ICIS case name may not correspond to the exact facility name for ICIS records linked via EPA's Facility Registry System (FRS), ECHO Facility Searches, or other program data systems.

Government Publication Date: Oct 8, 2022

Criminal Enforcement Actions: CRIM

Criminal Enforcement Actions database that is maintained by the US environmental protection agency (EPA) which reports criminal enforcement cases for all environmental statutes

Government Publication Date: Jun 17, 2022

EPA Dockets: DOCKETS

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. The EPA DOCKETS system was decommissioned in 2002.

Government Publication Date: Dec 22, 2005

Permit Compliance System (PCS): PCS

Permit Compliance System (PCS) database that is maintained by US Environmental Protection Agency (EPA) provides historic water discharge permit information by state. The Permit Compliance System (PCS) is gradually being replaced by the modernized system called Integrated Compliance Information System (ICIS).

Government Publication Date: Nov 12, 2012

Federal National Pollutant Discharge Elimination System (NPDES): NPDES

ICIS-NPDES is an information management system maintained by the Office of Compliance at the US Environmental Protection Agency (EPA) to track permit compliance and enforcement status of facilities regulated by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act (CWA). ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

Government Publication Date: Jan 15, 2022

Financial Assurance Summary: FINA

This Financial Assurance Summary data provides a list of all Resource Conservation and Recovery Act (RCRA) regulated Treatment, Storage, & Disposal (TSD) sites with Financial Assurance coverage. The data shows the cost estimate for each mechanism type. A mechanism can include letters of credit, bonds, trust agreements, insurance, and self-insurance. This national listing is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Nov 8, 2022

Biennial Reporting System (BRS): BRS

The Biennial Reporting System (BRS) database manitained by the Environmental Protection Agency (EPA) that contains biennial reports submitted by generators of hazardous wastes and facilities that treat, store or dispose of hazardous wastes.

Government Publication Date: Dec 16, 2016

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Enforcement and Compliance Data (ECHO): ECHO

The Enforcement and Compliance History Online (ECHO) data focuses on compliance and enforcement-related information for regulated facilities, including permit data, inspection/compliance evaluation dates and findings, violations of environmental regulations, enforcement actions, and penalties assessed. The data encompasses facilities related to air emissions, surface water discharges, hazardous waste, and drinking water systems. The information contained in ECHO is made available to the public by the U.S. Environmental Protection Agency (EPA) for information purposes only, and the data is sourced from the ECHO Exporter file.

Government Publication Date: Sep 25, 2022

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Jul 28, 2022

Civil Cases and Settlements: CIVIL CASES

A listing of significant civil and cleanup cases and settlements from 1998 and onwards, made available by the United States Environmental Protection Agency (US EPA). This is not a complete list of all enforcement actions taken by or on behalf of EPA. Rather, it represents a subset of enforcement cases, taken civil judicially or administratively, which may be of national interest. Most of the settlements are civil judicial consent decrees resolving alleged violations of environmental laws (e.g., the Clean Air Act, the Clean Water Act); this listing does not include: most administrative enforcement actions; most civil judicial cases resolving liability under CERCLA; criminal enforcement matters.

Government Publication Date: Oct 4, 2022

National Compliance Database System - Case Listings: NCDB CASE LIST

Case listings from the National Compliance Database System (NCDB), the historical repository for national data from the United States Environmental Protection Agency's ten regional and Headquarters FIFRA/TSCA Tracking System (FTTS). Data collected in the regional FTTS was transferred to NCDB to support the need for monitoring national performance of the following programs: Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Toxic Substance Control Act (TSCA) , Emergency Planning and Right-to-Know Act, Section 313 (EPCRA) , Asbestos Hazard Emergency Response (AHERA). EPA's Integrated Compliance Information System (ICIS) is the current system of record for this data since 2006.

Government Publication Date: Sep 1, 2006

National Compliance Database Information - Facility Inspection: NCDB FAC INSP

Facility inspection information from the National Compliance Database (NCDB), the historical repository for national data from the United States Environmental Protection Agency's ten regional and Headquarters FIFRA/TSCA Tracking System (FTTS). Data collected in the regional FTTS was transferred to NCDB to support the need for monitoring national performance of the following programs: Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Toxic Substance Control Act (TSCA) , Emergency Planning and Right-to-Know Act, Section 313 (EPCRA) , Asbestos Hazard Emergency Response (AHERA). Since October 2006, the EPA has been entering new inspection information into the Integrated Compliance Information System (ICIS), the current system of record for this data.

Government Publication Date: Sep 1, 2006

Hazardous Waste Compliance Docket Facilities: DOCKET HW

This list of the Federal Agency Hazardous Waste Compliance Docket Facilities is maintained by the United States Environmental Protection Agency (EPA). According to the EPA, Section 120(c) of CERCLA requires EPA to establish a listing, known as the Federal Facility Hazardous Waste Compliance Docket (Docket), of Federal facilities which are managing or have managed hazardous waste; or have had a release of hazardous waste. Thus, the Docket identifies all Federal facilities that must be evaluated to determine whether they pose a risk to human health and the environment and it makes this information available to the public.

Government Publication Date: May 6, 2021

State

NPDES Permit Listing: NPDES

A list of National Pollutant Discharge Elimination System (NPDES) permits made available by the Tennesse Department of Environment and Conservation.

Government Publication Date: Jul 7, 2022

Drycleaner Environmental Response Program Remediation Sites: PRIORITY CLEAN

Tennessee's Department of Environment and Conservation (TDEC) Division of Remediation operates a program called the Drycleaner Environmental Response Program (DCERP). This program keeps a list of DCERP remediation sites.

Government Publication Date: Sep 20, 2022

Delisted Drycleaner Environmental Response Program Remediation Sites: DELISTED DCER

The list of Drycleaner Environmental Response Program, maintained by the Tennessee's Department of Environment and Conservation Division of Remediation, would remove a record if the program finished the remediation. This list contains all such records that has finished remediation.

Government Publication Date: Sep 20, 2022

Registered Drycleaner Facilities List: DRYCLEANERS

The Drycleaner Environmental Response Program (DCERP) of the Department of Environment and Conservation maintains a list of registered drycleaner facilities.

Government Publication Date: Sep 13, 2022

Delisted Drycleaners List: DELISTED DRYCLEANERS

List of sites removed from the drycleaners database made available by the Department of Environmental and Conservation.

Government Publication Date: Sep 13, 2022

Registry of Contaminated Properties: CDL

The Department of Environment and Conservation (DEC) maintains a registry of all properties reported by a law enforcement agency that have been under order of quarantine for at least sixty (60) days. These properties have been quarantined due to the criminal activities associated with Clandestine Methamphetamine Laboratories (CML). This list is maintained by The Department of Environment and Conservation (TDEC).

Government Publication Date: Sep 8, 2022

Spills, Emergency Response Data: SPILLS

An inventory of spill locations reported to Tennessee Emergency Management Agency. This list made available by Tennessee Emergency Management Agency (TEMA).

Government Publication Date: Jul 22, 2015

Statewide Petroleum Incident Logging Section (SPILS) List: SPILS

Tenneessee's Statewide Petroleum Incident Logging Section (SPILS) is a new program within the Tennessee Department of Environment and Conservation (TDEC)'s Division of Solid Waste Management (DSWM). The SPILS program log incidents along Tennessee's roadways where a reportable quantity of petroleum products is released to the environment, ensuring that appropriate cleanup standards are applied, remediation activities are completed, and final reports detailing the response are received and reviewed.

Government Publication Date: Nov 14, 2022

Solid Waste Management (SWM) Complaints: SWM COMPLAINT

List of Solid Waste Management (SWM) complaints in the Tennessee Department of Environment & Conservation (TDEC) Dataviewer.

Government Publication Date: Jan 25, 2021

Hazardous Waste Management Facilities: HWM

List of Hazardous Waste Management Facilities made available by Tennessee's Department of Environment and Conservation. Includes Active, Inactive, Closed, Open, Operating, and Not Operating facilities. This is not a complete list of hazardous waste management facilities permits in the state of Tennessee.

Government Publication Date: Nov 7, 2022

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

EJScreen EJ Indexes

Twelve environmental justice (EJ) indexes of EJScreen, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. The index values below are for the Census block group or 1-mile maximum (US or State) in which the facility is located. Note that use of these indexes does not designate an area as an "EJ community" or

"EJ facility." EJScreen provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJScreen home page.

Show EJ Indexes calculated based on: Census Block Group - US

Census Block Group EJ Indexes (percentile)	
Particulate Matter 2.5	93
Ozone	95
Diesel Particulate Matter	95
Air Toxics Cancer Risk	98
Air Toxics Respiratory Hazard Index	98
Traffic Proximity	98
Lead Paint	92
Risk Management Plan (RMP) Facility Proximity	84

Demographic Profile of Surrounding Area (1 mile)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2016 - 2020 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary.

General Statistics (U.S. Census)	
Total Persons	13,041
Population Density	4,167/sq.mi.
Housing Units in Area	7,163

Re: 295 Red Sox Lane

Sir/Madam:

Our research of your request regarding outstanding fire code violation, for the above address, 295 Red Sox shows that we have files for this location and **NO** outstanding violations. We show no records of hazardous storage, spill, releases, and underground/aboveground tanks in our office. If you need information about **fire reports,** please call **901.636.5429**, for all FOIA quick research email all inquiries to us at fire.prevention@memphistn.gov Last fire inspection completed 7.30.20.

Also, please be advised that the following fee schedule is applied for purchases of inspections, 1st page $10.00 each additional page-$1.00. must be submitted via develop901.com, prior to release of records.

If this inspection is regarding hazardous materials for a property, you may contact the **SORT** office at **Fire Training at 901.636.5724**. I hope that this response adequately addresses your request. If there are any further questions, please contact our office at 901.636.5670.

Respectfully,

Subject: RE: Action Required: Public Record Request - ID-1481

Trace Hilbun,

There were no recent files available with the dates of September 2022 to current date for any of the DoR files listed. Specifically, the DoR files with SRS proceeding the site id are old files DoR inherited from another divisions with many of the dates of those files are mostly prior to 2010 and have a status of "closed" meaning we would not have any recent information for those old files.

We value your feedback! Please complete our customer satisfaction survey.

Environmental Professional Statement:
We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

EnSafe Inc. performed a Phase I Environmental Site Assessment (ESA) of Block A of the Legends Park Subdivision in Memphis, Shelby County, Tennessee (subject property), in general conformance with the ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13 (ASTM 2013).[1] The goal of this Phase I ESA is to identify evidence of *recognized environmental conditions*.[2] The findings, conclusions, and environmental professional opinion in this Phase I ESA report result from interviews; historical, government, and physical setting resource review; and subject property reconnaissance on August 26, 2022.

This environmental assessment has identified the following associated with the subject property:

- The subject property consists of 3.82 acres of a larger 4.77-acre vacant parcel identified as Shelby County Parcel 051017 00018 and is located within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). The subject property is adjoined to the north by Peach Avenue then Interstate 40, to the east by Decatur Street then multi- family residences and a church, to the south by multi-family townhomes, Red Sox Lane, and apartment buildings, and to the west by a portion of the vacant larger parcel.

- The subject property has been developed since at least 1897 with single and multi- family residential buildings. The subject property was part of the former Dixie Homes public housing development from 1937 until 2006 when the area was cleared for redevelopment as the Legends Park Subdivision.

- The Brownfields Voluntary Agreement (BVA) Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include: 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restrictions 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the

[1] ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

[2] ASTM defines a *recognized environmental condition* as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment."

subject property, the soil must be managed in accordance with a Tennessee Department of Environment and Conservation (TDEC) approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in a city directory for the year 1921 (EnSafe 2020). No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information was identified in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners and Dyers may have operated as a dry cleaner.

- The west- and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, petroleum polyaromatic hydrocarbon impacted soils were used as geotechnical fill material on the west-adjoining property. To prevent exposure to the petroleum polyaromatic hydrocarbons, the soil is contained beneath an orange "witness barrier" (i.e., safety fencing) and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored hazardous substances and/or petroleum products including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products.

- Five soil gas samples were collected throughout the subject property in 2021. Benzene and naphthalene were detected at concentrations exceeding the United States Environmental Protection Agency residential Vapor Intrusion Screening Levels in one sample location (SG01) on the southeast portion of the subject property. Additionally, concentrations in SG01 exceeded the acceptable residential carcinogenic risk quotient of 1E-05 with a result of 1.20E-05. The planned construction of a new building at the subject property is not in the

vicinity of SG01; however, the intended use of the subject property and location of future structures will dictate further recommendations for soil vapor mitigation.

This assessment has revealed evidence of the following *recognized environmental condition* and *controlled recognized environmental condition* in connection with the subject property.[3]

- BVA Site ID 79-846 includes the subject property and adjoining properties to the west and south. The BVA outlines environmental conditions identified upgradient of these properties that include: 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property.

- The subject property is subject to land use restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, land use restrictions are considered a *controlled recognized environmental condition*.

This executive summary is an excerpt of a detailed Phase I ESA report that includes elements necessary for proper interpretation, including any limitations, exceptions, and deletions to ASTM 2013 and established scope of work. As such, the executive summary should not be used independently of the Phase I ESA report and its supporting documentation.

[3] ASTM defines a *controlled recognized environmental condition* as "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

1.0 INTRODUCTION

EnSafe Inc. was retained by PennRose to conduct a Phase I Environmental Site Assessment (ESA) of Block A of the Legends Park Subdivision in Memphis, Shelby County, Tennessee (subject property), as shown on Figure 1 (Appendix A). The subject property consists of 3.82 acres of a 4.77-acre vacant grass-covered parcel identified as Shelby County Parcel 051017 00018, which occupies approximately the east half of a city block bound by Peach Avenue, Decatur Street, Delmar Avenue, and Ayers Street. Additionally, the subject property is within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). Figure 2 (Appendix A) is a Site Vicinity Map, which shows the subject property and adjoining properties.

1.1 Purpose

The subject property was assessed with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and petroleum products. This assessment is intended to constitute all appropriate inquiries (AAI) into the previous ownership and uses of the property consistent with good commercial and customary practice as defined in 42 United States Code Section 9601 (35)(B) and promulgated at 40 Code of Federal Regulations Part 312 (AAI Final Rule). As such, the assessment is intended to permit the designated *user* to satisfy one of the requirements to qualify for the innocent landowner, bona fide prospective purchaser, or contiguous property owner limitations on CERCLA liability (hereinafter, the Landowner Liability Protections).

The ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13 (ASTM 2013) is the current industry standard used to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate.[1] The goal of a Phase I ESA is to identify evidence of *recognized environmental conditions,* defined by ASTM as, "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

[1] ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

In accordance with ASTM 2013, this Phase I ESA was also intended to identify the following:

- *Controlled recognized environmental condition:* "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Historical recognized environmental condition:* "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Business environmental risk:* "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."

- *De minimis condition:* "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." A condition found to be *de minimis* is not a *recognized environmental condition* or *controlled recognized environmental condition*.

1.2 Scope of Services

The Phase I ESA includes the following:

- Visual assessment of the subject property on August 26, 2022, by Mr. Steffen Matthews of EnSafe under the direction of Ms. Allison Harris; resumes are included in Appendix B.

- Interviews with personnel discussed in Section 3.1.

- Review of standard and additional federal, state, and local environmental records sources for the subject property and properties within ASTM 2013 approximate minimum search distances (AMSDs). Database search information is provided in Appendix C.

- Review of the historical resources (i.e., United States Geological Survey topographic maps, aerial photographs, fire insurance maps, and city directories) and land-use records included in the prior Phase I ESA, dated February 2022 (EnSafe, February 2022).

- Review of regulatory information available from the United States Environmental Protection Agency (U.S. EPA) Envirofacts website, regulatory files available through the Tennessee Department of Environment and Conservation (TDEC), and information on TDEC websites. Select information is provided in Appendix D.

- Review of historical, physical setting, and regulatory information from Phase I ESAs dated November 2020 and February 2022 (EnSafe 2020 and February 2022) of the subject property; the February 2022 Phase I ESA is included in Appendix E of this Phase I ESA Report.

- Review of the user questionnaire provided to the Client and completed by Mr. Brian Thomas, PennRose Developer, as documented in Appendix E.

- Review of information from the websites listed in Section 6.

1.3 Client Information and User Responsibilities

EnSafe was retained by PennRose to conduct the Phase I ESA. According to ASTM, the *user* shall make known the reason for the Phase I ESA. In contracting EnSafe for the Phase I ESA, Mr. Thomas indicated the Phase I ESA was being conducted as part of due diligence before purchase, to obtain financing, and as part of a 4% Low-Income Housing Tax Credit Application with the Tennessee Housing Development Agency.

The AAI Final Rule and Section 6.0 of ASTM 2013 describe tasks to be performed by the *user* that are required to qualify for Landowner Liability Protections to CERCLA liability. The information that results from those tasks should be provided to the environmental professional to consider with respect

to identifying *recognized environmental conditions*. Appendix E contains a questionnaire provided to the *user* outlining those tasks.

1.4 Non-Scope Items

At the request of PennRose, and as documented in Appendix E, EnSafe's Phase I ESA scope of work was not expanded to include consideration of environmental issues or considerations that are beyond the scope of ASTM 2013.

2.0 PHYSICAL SETTING

Table 1 summarizes information obtained from review of physical setting sources and other sources reviewed during the Phase I ESA listed in Section 1.2.

Table 1
Physical Setting Summary

Topography	
Elevation (feet above mean sea level)	255 to 270
Topography	The central portion of the subject property is higher in elevation than the property perimeter. Additionally, the central-east portion is higher than the central-west portion.
Evidence of landfilling or excavation	Soil from other areas within the Legends Park Subdivision was stockpiled and used as fill on the subject property, which is further discussed in Section 3. In addition, "abundant brick debris" was encountered at 4 to 6 feet below ground surface (bgs) and concrete was encountered at 6 feet bgs in boring SB02 advanced in the central-east portion of the subject property in 2021. Traces of brick, sand, and cinders were encountered at 10 feet bgs in boring SB03 in the central-north portion of the subject property (EnSafe 2021).
Adjoining — higher elevation	East-southeast
Adjoining — lower elevation	Southwest
Surface Water and Subject Property Drainage	
Subject property surface water features	None
Adjoining surface water features	None
Nearest water body	Quimby Bayou
Direction and approximate distance to nearest water body	Approximately 740 feet west
Storm water management	Storm water that does not infiltrate grass surfaces is expected to follow surface topography and flow toward curbside storm drains on adjoining streets.
Flood zone (summarized from Appendix E)	The subject property is not mapped within the 100- or 500-year flood zones.
Wetlands (summarized from Appendix E)	No wetlands are mapped on the subject property.
Geology	
Soil types (and estimated depths/thickness)	Five soil borings installed in 2021 to depths of 28 to 32 feet bgs encountered predominantly silty clay. Limited intervals of silty clay with gravel and sand or with pebbles and gravel were encountered in some of the borings. Alternating clay and silty clay were also encountered in a few borings at depths greater than 20 feet bgs (EnSafe 2021).
Bedrock (depth and type)	Not reported in sources reviewed for this assessment.
Hydrogeology	
Wells on subject property	Five temporary groundwater wells installed in 2021 were removed and abandoned with bentonite chips after sampling (EnSafe 2021).
Approximate depth to groundwater (feet) at the subject property	Groundwater was observed at 12 to 25 feet bgs in 2021 (EnSafe 2021).
Reported direction of groundwater flow at the subject property	Not identified in sources reviewed for this assessment.
Relevant surrounding property wells	Two sentinel groundwater monitoring wells installed at 918 and 934 Poplar Avenue (within the Legends Park Subdivision) are approximately 0.20 and 0.25 mile southwest of the subject property.
Approximate depth to groundwater (feet)	12 to 25
Reported direction of groundwater flow	North to northwest

3.0 SUBJECT PROPERTY

Subject property information discussed below was obtained from interviews and sources identified in Section 1.2 and referenced in Section 6.

3.1 Interviews

Table 2 lists personnel interviewed, indicates their association with the subject property or this Phase I ESA, and summarizes topics discussed and information provided. Table 2 also lists local and state agencies from which EnSafe requested information and the results of those inquiries.

Table 2
Summary of Interviews

Name	Affiliation	Association with Subject Property	Time[1]	Information Provided/ Section Discussed
Ms. Deborah Payne	Memphis Housing Authority	Key Site Manager Current Owner Representative	14	Ms. Payne provided information regarding current and historical subject property operations and development. Information provided is discussed in Sections 3 and 4.
Ms. Luretha Phillips	Memphis Housing Authority	Current Owner Representative	26	Ms. Phillips provided information regarding current and historical subject property operations and development. Information provided is discussed in Sections 3 and 4.
Ms. Alison Campany	TDEC — Division of Remediation	State Environmental Agency Official	20	Ms. Campany provided information regarding Legends Park Subdivision and surrounding area environmental database listings. Information provided is discussed in Sections 3 and 4.

Summary of Records Requests

Name	Agency	Result of Inquiry/Section Discussed
Ms. Patricia Alston	Memphis Division of Fire Prevention	No records were identified related to the subject property. No records related to adjoining or surrounding properties were identified.
Ms. Alison Hensley	TDEC — Division of Remediation	Additional records beyond those obtained during the February 2022 Phase I ESA were not identified for the subject property or adjoining and surrounding properties.
Ms. Jenaka Bowen	TDEC — Memphis Field Office	Additional records beyond those obtained during the February 2022 Phase I ESA were not identified for the subject property or adjoining and surrounding properties.

Notes:
[1] Length of time or number of years the person has been affiliated or familiar with the subject property or surrounding area.
TDEC = Tennessee Department of Environment and Conservation

3.2 Prior Environmental Assessments

Prior environmental assessments that include the subject property have been conducted since 2003, including three Phase I ESAs, soil sampling summaries, and multiple Phase II investigations. Reports summarized in this section are those evaluating the portion of the Legends Park Subdivision (former Dixie Homes) north of Delmar Avenue (i.e., portions of the Legends Park Subdivision site that include the subject property). Findings for the entire Legends Park Subdivision site are summarized in Section 3.6. A copy of the prior February 2022 Phase I ESA is included in Appendix E.

2020 Phase I Environmental Site Assessment

A Phase I ESA for the approximate subject property boundary was performed in November 2020 (EnSafe 2020). The Phase I ESA identified that Legends Park Subdivision (including the subject property) lies within the Dixie Homes State Remediation Program (SRP) site 79-846 (discussed in Section 3.6); additionally, a Notice of Land Use Restriction was imposed on the Legends Park Subdivision as an institutional control to address groundwater contamination. The 2020 Phase I ESA identified the following *recognized environmental condition* and *controlled recognized environmental condition*:

- "Given the BVA [Brownfields Voluntary Agreement] and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property."

- "The subject property is subject to Land Use Restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*."

2021 Phase II Environmental Site Assessment

In December 2021, a Phase II ESA was conducted to evaluate the site for potential chemicals of concern associated with historical operations. Five soil borings (SB01-SB05) were advanced at the subject property portion of the Brownfields Voluntary Agreement (BVA) site (EnSafe 2021). Two soil samples were collected from each soil boring location and each was converted into a

temporary monitoring well to collect a groundwater sample. Additionally, soil gas samples were collected from five locations across the subject property.

Metals data identified arsenic and chromium concentrations in soil above residential and industrial U.S. EPA Regional Screening Levels (RSLs). Arsenic only exceeded the Tennessee background level (10 milligrams per kilogram [mg/kg]) in a single soil sample from 16 to 20 feet below ground surface (bgs) (TDEC 2001). Chromium exceeded the Tennessee background level (20 mg/kg) in soil samples from three separate soil borings from 24 to 32 feet bgs. The Phase II ESA report concluded these concentrations were not statistically higher than the Tennessee background levels. Polyaromatic hydrocarbon (PAH) data identified benzo(a)pyrene concentrations in soil from 4 to 8 feet bgs in one soil boring above residential and industrial RSLs. All other detections in soil were below RSLs, including volatile organic compounds (VOCs) and extractable petroleum hydrocarbons (EPH).

Groundwater samples did not have concentrations of metals, VOCs, PAHs, or EPH above their respective U.S. EPA maximum contaminant level or tapwater RSLs.

Five soil gas samples (SG01-SG05) were collected throughout the subject property. The VOC data identified benzene (13.8 micrograms per cubic meter [µg/m^3]) and naphthalene (26.8 µg/m^3) concentrations in one soil gas sample location (SG01) above the U.S EPA residential Vapor Intrusion Screening Levels (VISLs) of 12 µg/m^3 for benzene and 2.75 µg/m^3 for naphthalene. Additionally, naphthalene exceeded the commercial VISL of 12 µg/m^3. Concentrations detected at SG01 also exceeded the maximum U.S. EPA VISL carcinogenic risk, a calculated and location-specific unitless quotient, of 1E-05 with a risk of 1.20E-05. The Phase II report concluded vapor mitigation should be considered for future development within sample area SG01 (southeast corner of the subject property), and the future use of the subject property will dictate further recommendations for, but not limited to, a passive mitigation system or vapor barrier.

February 2022 Phase I Environmental Site Assessment

A Phase I ESA conducted in February 2022 included ASTM 2013 non-scope items concerning National Environmental Policy Act environmental factors (EnSafe 2022). The Phase I ESA identified the same *recognized environmental condition* related to the BVA and surrounding area properties and the same *controlled recognized environmental condition* related to the Notice of Land Use Restriction detailed in the 2020 Phase I ESA. Additionally, the February 2022 Phase I ESA stated the ASTM 2013 non-scope issues related to compliance with National Environmental Policy Act were

assessed under National Housing Trust Fund guidance, and the project was found to comply with ASTM non-scope issues.

3.3 Historical Development and Uses

The historical document review and interviews were conducted to identify evidence of *recognized environmental conditions* in connection with past uses of the subject property.

3.3.1 Historical Development

The earliest historical resource reviewed for this Phase I ESA is an 1897 fire insurance map, included with historical sources obtained for the prior February 2022 Phase I ESA in Appendix E, which shows the subject property developed with numerous residential buildings along the east, south, and west portions, with a small stream traversing the north portion. The subject property remains primarily residential, except for a few shops/storefronts along Decatur Street, on the 1907 fire insurance map. Additionally, the small stream is no longer depicted by 1907. The 1916 and 1927 topographic maps depict multiple small structures in the central portion of the subject property and along the east and west property boundaries. A 1937 aerial photograph shows what appear to be multi-family residential buildings constructed throughout the subject property, except on the extreme eastern portion. The 1951 and 1952 fire insurance maps indicate the Dixie Homes Apartments residential buildings were constructed between 1936 and 1937, and apartment buildings on the east portion of the subject property were constructed in 1950. The subject property remains relatively unchanged in subsequent aerial photographs reviewed through 2006, except for the construction of Interstate 40 and rerouting of Peach Avenue along the north subject property boundary between 1969 and 1973. By 2007, the buildings have been razed and the subject property appears to be a vacant, unpaved, grass-covered lot. The 2010 aerial photograph shows the subject property cleared of most vegetation in preparation for development and construction activities, with several excavators visible. Grading and construction activities appear to continue until early 2012. By the November 2012 aerial photograph, the subject property is completely covered with grass. No significant changes were noted on aerial photographs reviewed from 2012 to 2021.

City directories obtained as part of the February 2022 Phase I ESA (EnSafe 2022) were reviewed at 3- to 6-year intervals from 1932 through 2020. The subject property had multiple addresses associated with residential buildings between 1932 and 2005: 945 to 1001 Peach Avenue, 319 to 347 Decatur Street, and 980 Delmar Avenue. The 2020 Phase I ESA (EnSafe 2020) identified

one subject property address, 335 Decatur Street, as Minkie Jos, a potential former dry cleaner, which is listed in the 1921 city directory.

3.3.2 Historical Uses and Operations

Based on historical sources reviewed, the subject property has been developed since at least 1897. Historical records indicate the subject property was residential in 1897 and remained primarily residential until 2006. According to Ms. Luretha Phillips with the Memphis Housing Authority (MHA), the former Dixie Homes, a public housing development, began construction in 1938; the former public housing development included the subject property parcel and multiple parcels to the south. According to Ms. Deborah Payne of the MHA, the MHA acquired title to the Dixie Homes site from the United States Housing and Home Finance Agency and Public Housing Administration in April 1951 and 1953. Based on information provided by MHA representatives, the housing development remained relatively unchanged until the buildings were demolished in 2006. Based on environmental records reviewed (discussed in Section 3.6), pre-construction activities, including various environmental assessments and investigations, were conducted for the Legends Park Subdivision (including the subject property) between 2003 and 2012. According to Ms. Phillips, building construction within the Legends Park Subdivision began in 2009. A 2010 aerial photograph appears to show the subject property being used to stage construction materials and equipment. The subject property has remained vacant since approximately 2012.

3.4 Current Uses

The subject property was visually assessed on August 26, 2022, by Mr. Matthews of EnSafe. The purpose of the site reconnaissance was to determine current uses and to identify evidence of *recognized environmental conditions* in connection with the subject property. Photographs taken during the site visit are in Appendix F. EnSafe personnel walked throughout the subject property unaccompanied. Adjoining and surrounding area properties were observed from the subject property boundaries and from nearby roads and driveways.

The subject property comprises 3.82 acres of vacant grass land within the Legends Park Subdivision with a fence comprising the north, east, and southeast subject property perimeter. Ms. Payne stated the subject property had no current operations or uses. MHA representatives had no knowledge of groundwater wells, septic tanks/systems, underground storage tanks, aboveground storage tanks, and/or utility services associated with the subject property.

3.5 Exterior Observations

Table 3 lists environmental issues and identifies those present or applicable to the subject property, based upon EnSafe's visual observations of the exterior, interviews, review of environmental records sources, regulatory research, and other publicly available and reasonably ascertainable information. Each environmental issue present or applicable is discussed in sections as noted in the table.

Table 3
Subject Property Observations

Current or Past Use	Present or Applicable	Comment/Report Section
Hazardous Substances and Petroleum Products	**No**	—
Storage Tanks	**No**	—
Odors (strong, pungent, or noxious)	**No**	—
Pools of Liquids	**No**	—
Drums (5 gallons and larger)	**No**	—
Unidentified Substance Containers	**No**	—
Polychlorinated Biphenyls (associated with electric or hydraulic equipment)	**No**	—
Fuel Source for Heating and Cooling Systems	**No**	—
Stains or Corrosion (on building walls, floor, and ceilings)	**No**	—
Floor Drains, Sumps, and Pits	**No**	—
Pits, Ponds, or Lagoons	**No**	—
Stained Soil or Pavement	**No**	—
Stressed Vegetation	**No**	—
Solid Waste	**Yes**	Windblown trash (e.g., food wrappers, drink containers) was observed along the north perimeter of the subject property. Additionally, a discarded automobile tire was observed along the east fence line.
Hazardous Waste	**No**	—
Wastewater	**No**	—
Wells	**No**	—
Septic Systems or Cesspools	**No**	—

3.6 Environmental Records Review

EnSafe obtained standard environmental record source information directly from a commercial service, TDEC, and U.S. EPA databases. The Legends Park Subdivision (former Dixie Homes), which includes the subject property, was identified on the TDEC Voluntary Cleanup, Oversight and Assistance Program (VOAP), Brownfield, and Institutional Control databases.

The subject property is part of the Legends Park Subdivision/former Dixie Homes TDEC VOAP site. According to Ms. Alison Campany with the TDEC Division of Remediation, the MHA has entered into multiple BVAs to address impacts to soil, soil gas, and groundwater on various lots within the Legends Park Subdivision that are planned for future residential development and use. Based on the regulatory information reviewed, TDEC Division of Remediation site ID 79-846 (hereinafter referred to as the BVA site) includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient of the site that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Based on TDEC records reviewed, groundwater samples were collected from two sentinel wells (SW-1 and SW-2) on the southwest corner of the BVA site, not on the subject property, between October 2010 and July 2012 for analysis of VOCs. Chlorinated solvent detections exceeded the U.S. EPA drinking water maximum contaminant levels. TDEC records indicate VOC impacts to BVA site groundwater likely originated from historical uses associated with properties farther south.

Because the BVA site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restriction 1) prohibits the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, other than PAHs, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

The 2020 Phase I ESA (EnSafe 2020) identified one subject property address, 335 Decatur Street, in the environmental database for the year 1921. The occupant was listed as Minkie Jos, a former clothes cleaner and presser. No additional information was provided in the 2020 database report; however, it is important to note that historical documents identify a storefront at this address and Minkie Jos may have operated as a dry cleaner. No additional information for this potential prior dry cleaner was identified as part of this Phase I ESA.

4.0 AREA RECONNAISSANCE

The current and historical uses of adjoining and surrounding area properties described below are based upon visual observations during the site reconnaissance and information obtained from interviews, historical research, and regulatory research conducted for the subject property. A commercial environmental database company provided a database search report that made environmental records for surrounding area properties within the ASTM-defined AMSDs reasonably ascertainable. Sites listed in the environmental records search within the ASTM-defined search distances for the databases on which they appear are discussed in Sections 4.1 through 4.3.

4.1 Adjoining Properties

The subject property is adjoined to the north by Peach Avenue and Interstate 40, beyond which are vacant grass-covered parcels and the formerCarnes Elementary School; to the east by Decatur Street, beyond which are multi-family residences and Columbus Baptist Church; to the south (from east to west) by a vacant grass lot, Legends Park Townhomes, Delmar Avenue beyond which are Legends Parks Townhomes, Red Sox Lane beyond which is the Legends Park courtyard, and Legends Park Apartments; and to the west by a vacant grass lot (portion of the larger parcel of which the subject property is a part).

4.1.1 North

The subject property is adjoined to the north, beyond Peach Avenue and Interstate 40, by vacant grass-covered parcels and the former Carnes Elementary School. Based on historical records reviewed, the north-adjoining properties were primarily residential, including a school, as early as 1897 and remained relatively unchanged through the early 1900s. However, a creek or drainage labeled "Run" is shown in the 1897 fire insurance map running through the north adjoining properties, where Peach Avenue and Interstate 40 are present day, but this stream does not appear in subsequent records. The 1937 aerial photograph shows residential structures associated with the former Dixie Homes in the current location of Peach Avenue and Interstate 40, and it also shows two large buildings and numerous smaller buildings farther north. The 1951 fire insurance map shows primarily residential buildings, a church, and school buildings (the Former Carnes Elementary School) on the north-adjoining properties. The fire insurance map indicates that the school buildings were constructed in 1920, 1939, and 1944. The north-adjoining properties appear relatively unchanged until construction of Interstate 40 and the rerouting of Peach Avenue between 1969 and 1973. Except for the former Carnes Elementary School and associated additions, the north-adjoining properties beyond Interstate 40 remain either residential or vacant grass-covered lots.

No environmental records were identified for the north-adjoining properties.

4.1.2 East

The subject property is adjoined to the east, beyond Decatur Street, by multi-family residences and Columbus Baptist Church. Based on historical records reviewed, the east-adjoining properties were residentially developed as early as 1897. A church is depicted on the 1907 fire insurance map. City directories list primarily residential addresses for the east-adjoining properties from at least 1932 until 2005 and Columbus Baptist Church from at least 1940 to 2011.

No environmental records were identified for the east-adjoining properties.

4.1.3 South

The subject property is adjoined to the south (east to west) by a vacant lot, Legends Park Townhomes, Delmar Avenue beyond which are Legends Parks Townhomes, Red Sox Lane beyond which is the Legends Park courtyard, and Legends Park Apartments. Based on historical records reviewed, the south-adjoining properties were primarily residential with some shops as early as 1897 and 1907. The 1927 topographic map shows numerous small structures on the south-adjoining property, and by 1937 the property is redeveloped with residential structures associated with the former Dixie Homes. Based on historical records reviewed, the south-adjoining properties remained residential until 2007 when the area was cleared for redevelopment. The 2010 aerial photograph shows an apparent storm water detention basin on the western part of the south-adjoining property. The 2012 aerial photograph shows the detention basin has been filled, likely when the Legends Park Apartments were constructed. According to Ms. Phillips, the Legends Park Townhomes were constructed in 2009.

The south-adjoining properties are within the Legends Park Subdivision VOAP/BVA site as previously discussed in Section 3.6. In accordance with the BVA associated with SRP Site ID 79-846, to prevent exposure to the PAH contaminants remaining in the soil, an orange plastic witness barrier was placed over contaminated soil, then covered with at least 2 feet of clean fill material, between June and October 2010.

Gordon Cleaners and Dyers, at 311 Decatur Street, was identified as a former clothes cleaner and presser in the 1932 historical city directory obtained for the February 2022 Phase I ESA. No additional information was identified in historical and database resources obtained for this Phase I ESA;

however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907 and Gordon Cleaners and Dyers may have operated as a dry cleaner.

4.1.4 West

The subject property is adjoined to the west by a vacant grass lot that is the west portion of Shelby County Parcel 051017 00018, of which the subject property is a part. Based on historical records reviewed, the west-adjoining property was previously developed with multi-family residential lots as early as 1897. The 1907 fire insurance map and 1927 topographic map show numerous small structures on the west-adjoining property, with an area clear of structures on the west side. The 1937 aerial photograph shows at least two residential structures associated with the former Dixie Homes on the east half of the west-adjoining property, while the west half is clear of structures. The 1951 fire insurance map indicates the west portion of the west-adjoining property is a playground. Based on historical records reviewed, the west-adjoining property remained a residential and playground/park area until 2007 when the area was cleared for redevelopment. The 2010 aerial photograph shows an apparent storm water detention basin on the west-adjoining property. The 2012 aerial photograph shows the detention basin has been filled and the west-adjoining property is a vacant grass-covered area. According to Ms. Payne, the west-adjoining property was used to stockpile soil from the Legends Park Subdivision construction and environmental activities occurring from 2009 to 2012.

The west-adjoining property is located within the Legends Park Subdivision VOAP/BVA site as previously discussed in Section 3.6. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjoining property. In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants remaining in the soil, an orange plastic witness barrier was placed over impacted soil, then covered with at least 2 feet of clean fill material, between June and October 2010.

4.2 Surrounding Area Properties

The surrounding properties have been developed with residential, commercial, and light industrial properties since at least 1897. The environmental database search identified a total of 39 sites beyond the subject property and adjoining properties. Of these sites, 13 are within the ASTM-defined AMSDs; additionally, six sites not listed on the environmental database report were identified in the prior 2020 and February 2022 Phase I ESAs. The 17 sites identified are summarized in Table 4.

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Memphis Bulk Plant	432 North Dunlap Street	0.25 mile northwest	LUST, VCP, and SRP	790769 and 799001	Closed, Land Use Restrictions	• Petroleum constituents detected in soil, soil gas, and groundwater. • Groundwater flows generally to the west. • Site-specific standards issued • TDSWM approves closure with land-use restrictions in 2005.	Not expected to migrate to subject property based on groundwater flow direction
Southern Steel	431 Dunlap Street	0.28 mile northwest	VCP, SRP, and Institutional Controls	791072	No Further Action	• Petroleum constituents detected in soil. VOCs and SVOCs detected in groundwater. • TDSWM approves closure with land-use restrictions in 2009.	Not expected to migrate to subject property based on site regulatory status and groundwater flow direction
Church's Fried Chicken	925 Poplar Avenue	0.26 mile south-southwest	VCP and SRP	790379	Inactive, No Further Action	• Petroleum impacts in soil and shallow groundwater. • Groundwater flow reported to the north/northwest. • SRP issued no further action required for petroleum impacts on March 1, 2011.	Not expected to migrate to subject property based on site regulatory status and groundwater flow direction
Le Bonheur Hospital/Memphis Mental Health Institute	865 Poplar Avenue	0.28 mile southwest	VCP and SRP	792714 and791119	Closed	• EPH detected in soil samples. • SRP issued no further action required status on November 17, 2009.	Not expected to migrate to subject property based on contamination being limited to soils and distance to subject property
VA Medical Center	1030 Jefferson Avenue	0.25 mile south	SEMS and LUST	TNN000410932 and 790807	Closed	• One UST was removed in December 1998; TDEC DUST issued closure on November 5, 1999.	Not expected to have had contamination that migrated to subject property based on regulatory status and distance from subject property

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
University Behavioral	135 North Pauline	0.33 mile south	LUST	791029	Case Closure	• One 2,000-gallon diesel UST and associated piping were removed in January 1999. • Soil detections below applicable action levels. • TDEC DUST issued case closure on July 1, 1999.	Not expected to have had contamination that migrated to subject property based on soil analysis and regulatory status
Amoco/ Poplar Avenue BP	821 Poplar Avenue	0.38 mile southwest	LUST	791083	Case Closure	• Petroleum impacts identified in soil and groundwater. • TDEC DUST issued contaminated case closure on August 28, 2015.	Not expected to migrate to subject property based on distance from the subject property and groundwater flow direction
Success Cleaners	1000 Jefferson Avenue	0.41 mile south	SRP	79867	Non-site	• Site identified along with Memphis Steam Laundry & Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files from 2018 indicate the site is to be considered a "non-site" until impacts are recognized.	Potential for contamination to have migrated to the subject property based on possible drycleaning operations and groundwater flow direction
Auto-Chlor System	746 Poplar Avenue	0.43 mile southwest	LUST, VCP, and SRP	790057, 79774, and 791083	Closed	• Petroleum hydrocarbon, VOC, and PAH impacts in soil and groundwater • Radial groundwater flow to the northwest, northeast, and southwest. • TDEC DOR issued no further action with land-use restrictions on October 26, 2016.	Potential for contamination to have migrated to the subject property based on groundwater analysis and flow direction.

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Spic N Span	813-815 Poplar Avenue	0.41 mile southwest	SRP and DCERP	79217	Closed	• Benzene, PCE, TCE, vinyl chloride, and 1,2-dichloroethylene were detected in groundwater above applicable action levels and benzene, PCE, and 1,2-dichloroethylene were detected in soil below applicable action levels. • DCERP authorized closure on November 13, 2007.	Not expected to migrate to the subject property based on distance from the subject property, regulatory status, and groundwater flow direction.
Memphis Steam Laundry and Cleaners	941 Jefferson Avenue	0.41 mile south-southwest	SRP	79855	Open	• Site identified along with Success Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files indicate a schedule for a sampling event was proposed for June 2009; however, records reviewed do not indicate if the event took place. At the time of this report's writing, the site is listed as "Pre-Remedial".	Potential for contamination to have migrated to the subject property based on possible drycleaning operations and groundwater flow direction
Extra Express Market/ 7-Eleven/ Flash Oil Co #72	777 Poplar Avenue	0.42 mile southwest	LUST	791539	Contamination Case Closed	• Petroleum contaminated soil and groundwater identified. • TDEC DUST issued case closure on May 9, 2018.	Not expected to migrate to the subject property based on distance from the subject property, regulatory status, and groundwater flow direction.

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Air Mask Service Unit	1010 Faxon Avenue	0.43 mile north	LUST	791109	Completed Tank Closure	• One 500-gallon diesel UST and associated piping drained and capped in September 1991. • Soil sample results collected from tank pit were non-detect or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on February 26, 1996.	Not expected to migrate to subject property based on contamination being limited to soils, distance to subject property, and groundwater flow direction
The Med Adam's Building	842 Jefferson Avenue	0.45 mile south-southwest	LUST	792354	Contamination Case Closed	• One 20,000-gallon UST and associated piping drained and capped in July 1999. • TDEC DUST issued case closure on February 6, 2002.	Not expected to have had contamination that migrated to the subject property based on regulatory status
Le Bonheur Faculty Office Building	824 Adams Avenue	0.46 mile southwest	LUST	799039	Completed Tank Closure	• One 1,000-gallon UST, one 500-gallon UST, and piping were removed in August 2015. • Soil samples collected from tank pit non-detect or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on August 18, 2015.	Not expected to have had contamination that migrated to the subject property based on soil analysis
Former Scott Union	749 North Parkway	0.47 mile northwest	LUST	790606	Contamination Case Closed	• Four 4,000-gallon and one 500-gallon USTs removed in February 1993. TDEC DUST issued case closure on May 13, 1993. • Release identified during Phase II in January 2000; impacted soils excavated; TDEC DUST issued case closure on September 13, 2000.	Not expected to have had contamination that migrated to the subject property based on soil analysis and groundwater flow direction

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Super Stop	945 Jackson Avenue	0.49 mile north	LUST	791890	Contaminated Closure	• Three USTs removed in August 1997. • TDEC DUST issued contaminated closure on October 2, 2000.	Not expected to migrate to the subject property based on distance from the subject property and groundwater flow direction

Notes:
LUST = Leaking Underground Storage Tank
VCP = Voluntary Cleanup Program
SRP = State Remediation Program
TDSWM = Tennessee Division of Solid Waste Management
VOC = volatile organic compound
SVOCs = semi-volatile organic compounds
EPH = Extractable petroleum hydrocarbon
SEMS = Superfund Enterprise Management System
UST = Underground storage tank
TDEC = Tennessee Department of Environment and Conservation
DUST = Division of Underground Storage Tanks
PCE = Tetrachloroethylene or perchloroethylene
PAH = Polyaromatic hydrocarbon
DOR = Division of Remediation
DCERP = Drycleaner Environmental Response Program
TCE = Trichloroethylene

4.3 Unmapped Sites

The environmental database search identified one site with environmental records which it could not map due to poor or inadequate address information. This site was determined to be beyond the ASTM-defined AMSDs for the database on which it was listed and was not researched further.

5.0 RESULTS OF THE ENVIRONMENTAL PROFESSIONAL INQUIRY

EnSafe performed a Phase I ESA of Block A of the Legends Park Subdivision in Memphis, Shelby County, Tennessee, in general conformance with the scope and limitations of ASTM 2013. Any exceptions to, or deletions from, this practice mentioned throughout the report are discussed in Sections 5.3 and 5.4.

5.1 Summary of Findings and Conclusions

- The subject property consists of 3.82 acres of a larger 4.77-acre vacant parcel identified as Shelby County Parcel 051017 00018 and is located within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). The subject property is adjoined to the north by Peach Avenue then Interstate 40, to the east by Decatur Street then multi-family residences and a church, to the south by multi-family townhomes, Red Sox Lane, and apartment buildings, and to the west by a portion of the vacant larger parcel.

- The subject property has been developed since at least 1897 with single and multi-family residential buildings. The subject property was part of the former Dixie Homes public housing development from 1937, until 2006 when the area was cleared for redevelopment as the Legends Park Subdivision.

- The BVA Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include: 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, the land use restrictions 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in environmental database records and historical city directories for the year 1921 (EnSafe 2020). No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information was identified in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners and Dyers may have operated as a dry cleaner.

- The west and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjoining property. In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants, the soil is contained beneath an orange "witness barrier" (i.e., safety fencing) and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored regulated materials including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products.

- Five soil gas samples were collected throughout the subject property in 2021. Benzene and naphthalene were detected at concentrations exceeding the United States Environmental Protection Agency residential Vapor Intrusion Screening Levels in one sample location (SG01) on the southeast portion of the subject property. Additionally, concentrations in SG01 exceeded the acceptable residential carcinogenic risk quotient of 1E-05 with a result of 1.20E-05. The planned construction of a new building at the subject property is not in the vicinity of SG01; however, the intended use of the subject property and location of future structures will dictate further recommendations for soil vapor mitigation.

5.2 Environmental Professional Opinion

This assessment has revealed evidence of the following *recognized environmental condition* and *controlled recognized environmental condition* in connection with the subject property:

- BVA Site ID 79-846 includes the subject property and adjoining properties west and south of the subject property. The BVA outlines environmental conditions identified upgradient of these properties that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and drycleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property.

- The subject property is subject to Land Use Restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*.

5.3 Data Gaps

No data gaps were encountered that limited EnSafe's ability to identify *recognized environmental conditions*.

5.4 Limitations and Exceptions

EnSafe's Phase I ESA generally conforms to ASTM 2013. EnSafe did not sample soil, soil vapor, groundwater, or surface water as part of the Phase I ESA. Assessment of these items is based upon visual observations and sources as referenced throughout the report. This report should not be construed as verifying the present property owner or operator's compliance with federal, state, and local regulations or as a recommendation to purchase, sell, or develop the subject property.

5.5 Significant Assumptions

This report is a prudent, reasonable evaluation of the subject property's observed environmental condition. EnSafe assumes no responsibility for conditions or information not

practically reviewable, or information not accurately disseminated by any party. The following significant assumptions were used to formulate the conclusions and opinions contained in this report:

- Groundwater flow generally follows topography.
- Environmental database information is accurate and complete.
- Conditions at the time of the site visit were representative of ordinary conditions at the subject property.
- The subject property boundaries depicted on figures and described herein are accurate.

5.6 User Reliance

The assessment was prepared under contract for the exclusive use of PennRose. Any other party's reliance on this report is at risk unless EnSafe grants authorization. In accordance with ASTM 2013, this Phase I ESA is presumed to be valid for 180 days from the date of completion. A Phase I ESA that meets or exceeds this practice and was completed more than 180 days previously may be used to the extent allowed in Sections 4.7 and 4.8 of ASTM 2013.

Appendix B
Resumes

STEFFEN MATTHEWS

Environmental Scientist/Geologist

EDUCATION

BA, Earth Science, University of Memphis, 2020

AFFILIATIONS/ ORGANIZATIONS

American Society for Photogrammetry and Remote Sensing

Society of Exploration Geologists

Steffen is an experienced geologist specializing in seismic processing, ground penetrating radar, electrical resistivity tomography, QGIS and Esri GIS products, geologic mapping, field data collection, Python Coding, lidar processing, and data analysis. He is adept at management and technical writing and is skilled at public outreach. Specific services include water sampling, soil and soil gas sampling, and Phase I-type assessments. Steffen has been published in several university publications for his research in the Golddust Quadrangle and the Nodena Quadrangle.

RELEVANT EXPERIENCE

***Research, Auburn University, Auburn, AL (2020-2021)**

As a Teaching Assistant, Steffen examined the effectiveness of ground penetrating radar for identifying earthquake-related features. He developed GIS analyses for classifying surface features related to materials found in the subsurface, and wrote technical papers and prepared presentations on his findings.

***Groundwater Study, Center for Applied Earth Science and Engineering Research, Memphis, TN (2020)**

As a Senior Water Technician, Steffen led field work to conduct reconnaissance on hydrogeologic areas of interest. He also supervised and performed piezometric analyses of groundwater with relation to the Memphis aquifer, and produced maps in ArcGIS for use by the local water utility company.

**indicates work for a previous employer*

ALLISON HARRIS, PG
Senior Geologist

EDUCATION

MS, Geology, University of Memphis, 1990

BS, Geology, University of Memphis, 1986

REGISTRATIONS

- Tennessee Professional Geologist, No. 788, 1989
- OSHA 1910.120 Health and Safety Training, including medical surveillance
- First aid and CPR certified, 2016

Allison has 29 years of experience in a variety of environmental programs. She is the project manager for multiple sites including Security Signals, an operable unit of the larger National Fireworks site where ammunitions were manufactured during World War II. As project manager, Allison is responsible for all aspects of this Superfund-Equivalent site. She ensures compliance with the Administrative Order of Consent, works closely with Tennessee Department of Environment and Conservation (TDEC) and USEPA regulators, and negotiates access agreements with offsite property owners. The investigation is being performed in phases to provide a cost-effective approach for the client and to allow for flexibility based on investigation findings. Known contamination includes trichloroethylene (TCE); suspected contaminants included perchlorate and various explosives.

RELEVANT EXPERIENCE

SUPERFUND PROJECTS

Remedial Investigation/Feasibility Study, US Navy, Naval Air Station (NAS) Pensacola, FL (2012-2018)

As task order manager, responsible for preparing remedial investigation/ feasibility study (RI/FS) planning documents, including Sampling and Analysis Plans, Investigation-Derived Waste (IDW) Plan, Proposed Plans, Records of Decision, and a Community Relations Plan. Other documents under her responsibility include RI Reports, Baseline Risk Assessments including Ecological Risk Assessments, FS Reports, and Site Characterization Reports. Managed CERCLA multi-phased field investigation of a 5.5-mile industrial waste sewer line including RCRA clean-closure of the industrial sewer line. The sewer line investigation included overseeing temporary and permanent monitoring well installations, monitoring well abandonment, and groundwater and soil sampling. This project was conducted under the Comprehensive Long-term Environmental Action Navy (CLEAN) program with USEPA Region 4 and the Florida Department of Environmental Protection (FDEP). Additional responsibilities included community relations activities, including establishing a Restoration Advisory Board and producing news releases, fact sheets, and public notices. Managed multidisciplinary staff from three separate offices. Specific project management responsibilities included proposal preparation, budgeting, cost tracking, invoicing, report generation, and client/agency liaison. Work performed at NAS Pensacola has earned one Secretary of the Navy and two Chief of Naval Operations awards.

TCE Remediation, Former ITT Telecomunications Facility, Milan, TN (2005-present)

Project manager for a chlorinated solvent investigation at an inactive facility contaminated by TCE and its breakdown products. The mile-long groundwater plume had previously impacted multiple private drinking water wells. Activities completed for the site include a focused FS evaluation of the source area and a human health risk assessment. National Contingency Plant (NCP) consistency activities included completing an Administrative Record, issuing a proposed plan and placing public notices announcing the comment period, and completing a Community Involvement Plan. The pilot test of an air sparge system determined that the system would be technically effective as well as cost-effective for the site, despite the great depth to groundwater.

Groundwater Monitoring, LaRoche Industries, Inc., Memphis, TN (2005)

Project manager for an RI/FS at a site investigated under the TDEC Division of Superfund. Responsibilities include assessment of an ongoing interim action for groundwater, finalizing the RI/FS report, monitoring well

installation, and groundwater sampling. This site was removed from the Tennessee Superfund list in November 2005.

Remedial Investigation/Feasibility Study, Tennessee Electroplating, Inc., Ripley, TN (2005)

Project manager for an RI/FS site being conducted under the TDEC Division of Superfund voluntary program. The investigation included delineating the extent of contamination in groundwater using direct-push technology (DPT), installing confirmation monitoring wells, and collecting soil and groundwater samples. Other responsibilities included completing a work plan, evaluating site data, negotiating with TDEC, and completing an RI/FS report.

BRAC Program Closure Investigation, US Navy, NAS Glenview, IL (2012)

As project geologist for Base Realignment and Closure (BRAC) program closure investigation at NAS Glenview, assisted with the field investigation and completed the RI/FS work plan. The investigation was conducted in accordance with CERCLA under the Navy's CLEAN program. Also coordinated the Administrative Record file for the facility. The Illinois Environmental Protection Agency and USEPA Region 5 were the regulatory agencies involved in the investigation.

Soil Sampling, Barmet Aluminum, Fort Hartford, KY (2016)

As project geologist responsible for logging and collecting soil samples from borings advanced across the site.

Subsurface Investigation, Amoco Corp. and Helena Chemical Co., Hayti, MO

This investigation included advancing soil borings for subsurface soil collection and installing onsite monitoring wells. Conducted onsite soil, sediment, and groundwater sampling and also assessed the presence of earthquake-induced liquefaction features at the facility. Compiled information and analytical data and wrote the report in accordance with a USEPA order. Met all USEPA deadlines for the report.

*Superfund Site, Waste Management Landfill, Anoka, MN (1991)

As project geologist for monitoring well and recovery well installations and soil boring investigation at this State of Minnesota Superfund site, responsible for overseeing subcontractors and completing boring logs of the complicated glacial lithology and bedrock.

CHLORINATED SOLVENT PROJECTS

Chlorinated Solvent Investigation, Bass, Berry & Sims, West Tennessee (2008)

Project geologist for a chlorinated solvent investigation at this active West Tennessee facility. This site has many challenges including complex geology, presence of dense non-aqueous-phase liquid (DNAPL), and an adjacent municipal wellfield. The investigation included advancing soil borings, installing onsite and offsite monitoring well nests, collecting soil and groundwater samples, performing a hydrogeologic investigation, and disposing of IDW.

Interim Remedial Action, former Spic N Span Cleaners, DCERP Project, Memphis, TN (2014-2016)

As project geologist, managed and conducted interim remedial action at this Dry Cleaner Environmental Response Program (DCERP) site in Memphis that is also under the Brownfields program. Work included injecting emulsified soybean oil into the source area. Duties included subcontractor selection and management and liaison with DCERP personnel. Project management included submitting reports to the state for approval and completing reimbursement applications for state payment.

PETROLEUM PROJECTS

Underground Storage Tank Investigation, Naval Support Activity Mid-South, Millington, TN (2007)

Task order manager for an underground storage tank (UST) investigation. The investigation included advancing soil borings using hollow-stem auger and DPT techniques, installing monitoring wells, collecting soil and groundwater samples, and disposing of IDW. Authored a contamination assessment report for the site. Because chlorinated solvent contamination was also detected onsite, the site was transferred to another program.

Underground Storage Tank Investigation, Carrier Corp., Brondby, Denmark (2009)
As project geologist for a UST investigation to assess whether the tank was leaking. Subsurface soil was assessed by advancing soil borings around the tank and collecting soil samples from beneath the tank. Authored a report detailing the investigation.

Underground Storage Tank Field Investigations, US Navy, NAS Kingsville, TX (2016)
Project geologist for field investigations at three UST sites. The field investigations included a soil-gas survey, soil boring advancement, monitoring well installation, and soil and groundwater sample collection. Authored a Contamination Assessment Report for one of the sites.

*Investigation and Remedial Activities, Clark Oil, Various Facilities in Minnesota (1991)
Project geologist for site investigations and remedial activities for various UST sites. Assimilated raw field data and analytical data into final technical reports. Also completed applications for the client to seek reimbursement from the state's Petrofund. Specific field experience included advancing soil borings, installing monitoring wells, organizing and supervising UST excavation and disposal, coordinating and monitoring contaminated soil excavation and disposal, onsite soil disposal, soil and groundwater sampling, and installation and maintenance of groundwater recovery and treatment systems.

*Tank Closures, Site Investigations, Remedial Activities, Ryder Truck Rental, Various Facilities in Florida, Wisconsin and Illinois (1991)
Project geologist for tank closures, site investigations, and remedial activities for six UST sites. Assimilated raw field data and analytical data into final technical reports in accordance with the applicable state regulations.

RCRA PROJECTS

Environmental Investigation, Lucite International, Olive Branch, MS (2010)
Project manager for investigation completed for two solid waste management units at this active facility. Authored work plan, coordinated field investigation, and authored final report. This facility received a no-further-action status upon completion of this investigation.

Naval Support Activity Mid-South, Millington, TN (2007)
Authored a RCRA Facility Investigation Report for a solid waste management unit at this facility undergoing realignment. This project was conducted under the Navy's CLEAN program with USEPA Region 4 and TDEC.

Comprehensive Sampling and Analysis Plan, Charleston Naval Shipyard RFI, Charleston, SC (2012-2013)
Assisted in preparing the RCRA Facility Assessment comprehensive work plan for the facility. Wrote the Comprehensive Sampling and Analysis Plan for field activities to be performed during the investigation.

BROWNFIELDS

Site Investigation, Memphis Biofuel, Memphis, TN (2007)
Project manager for site investigation at a former chemical manufacturing facility. The investigation included soil and groundwater sampling. Areas of identified toxaphene contamination in soil were managed under a Soil Management Plan. The Brownfields agreement was subsequently signed with the plan included as an appendix.

Site Investigation, Z-Mart, Memphis, TN (2002)
Project manager for site investigation at a former petroleum UST site. The site was proposed for inclusion in a Brownfields agreement for redevelopment with two other properties. After completing the investigation, managed the completion of the Removal Action Work Plan for the identified soil contamination. The plan was approved by TDEC with minimal comments. A Demolition Plan completed for the onsite building accounted for handling of contaminated materials that was encountered at the site. The building was demolished and a successful soil removal action was performed.

Site Investigation, Mid-South Nephrology Clinic, Memphis, TN (2005)
Project manager for site investigation at a former automatic transmission shop and cleaners site. The site was proposed for inclusion in a Brownfields agreement for redevelopment. The investigation included soil and groundwater sampling using DPT to delineate the nature and extent of contamination.

SOLID WASTE

*Soil Boring Investigation, Laidlaw Sanitary Landfill, Terra Haute, IN (1990)

Project geologist for monitoring well installations and soil boring investigation.

*Groundwater Monitoring System Work Plan, Northeast Otter Tail County Sanitary Landfill, New York Mills, MN (1991)

Hydrogeologist for the Northeast Otter Tail Sanitary Landfill. Authored a Groundwater Monitoring System Work Plan in accordance with Minnesota Solid Waste Rules.

SITE ASSESSMENTS

Property Transfer Investigation, Wright Medical, Arlington, TN (2006)

Project manager for a fast-track investigation of a potential property transfer. Investigation included DPT sampling of soil and groundwater, trenching of anomalies identified during a geophysical survey, and sediment sampling. Project was completed in approximately 30 days and met all of the client's objectives and data needs.

Hazardous Materials Sampling, Guardian Industries, Various Facilities in Tennessee, Missouri, and Arkansas (2008)

Project manager for a fast-track investigation of a potential stock transfer at various automotive manufacturing facilities. Investigation included DPT sampling of soil and groundwater and asbestos sampling. Project was completed in approximately 30 days and met all of the client's objectives and data needs.

Phase I Environmental Site Assessments, Great Smoky Mountain National Park, Gatlinburg, TN (2005)

Project manager for two Phase I Environmental Site Assessments (ESAs) as related to the Tapoca Land Exchange. One of the ESAs was completed for an area of approximately 110 acres, while the second area was approximately 281 acres. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessment, National Park Service, St. John U.S. Virgin Islands (2001)

Project manager for a Phase I ESA for a 375-acre tract. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I and II ESAs, National Park Service, Stones River National Park, Murfreesboro, TN (2001)

Project manager for Phase I and II investigations completed on two tracts being considered for purchase by the National Park Service. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessments, Bass, Berry & Sims, Alabama and Indiana (2006)

Project manager for Phase I ESAs completed on property considered for purchase by the client. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I Environmental Site Assessment, Bass, Berry & Sims, Arkansas (2006)

Project manager for Phase I ESA completed on property considered for purchase by the client. The property was a former tie manufacturing facility. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Phase I and II Site Investigations, Bass, Berry & Sims, La Mirada, CA (2005)

Project manager for Phase I and II investigations completed on property considered for purchase by the client. Phase II activities included monitoring well installation, soil sampling, and groundwater sampling. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, client liaison, and coordinating with other parties' consultants.

Phase I Environmental Site Assessments, Performance Food Group, Various Sites in Illinois, Mississippi, and Arkansas (2005)

Project manager for Phase I ESA completed on property considered for purchase by client. Responsibilities included proposal preparation, budgeting, cost-tracking, invoicing, report generation, and client liaison.

Complaint

Complaint No: 46636
Assigned Date: FEB-23-2018
Date Received: FEB-02-2018
How Received: Phone
Concerning: Used Oil
Concering (Other):

Investigation

Status: NOV
Status Detail: Area where engines are pulled had some staining on the ground as well as a few puddles of antifreeze from incidental spillage. Once engines and transmissions are removed they are drained into an oil tank inside the building and used to power a used oil heater. Owner agreed to move the rack onto a concrete surface, remove the stained soil and institute procedures to minimize and contain spillage. An NOV will be sent.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Jun 30, 2022

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Jun 30, 2022

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jun 27, 2022

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jun 27, 2022

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jun 27, 2022

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jun 27, 2022

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jun 27, 2022

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jun 27, 2022

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jun 27, 2022

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 25, 2022

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: May 25, 2022

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: May 25, 2022

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jun 5, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 20, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Feb 4, 2022

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Feb 4, 2022

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Jun 30, 2022

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: May 3, 2022

State

Promulgated Sites: SHWS

The Promulgated List made available by Tennessee's Department of Environment and Conservation (TDEC) is a List of Inactive Hazardous Substance Sites. 'Inactive hazardous substance sites that constitute an imminent, substantial danger' is an inactive hazardous substance site where there is a threat of danger to the public health, safety, or environment which is both real and presently existing. This database is state equivalent NPL.

Government Publication Date: Jun 14, 2022

Delisted State Hazardous Waste Sites: DEL SHWS

This database contains a list of sites which have removed from The Promulgated Sites Listing maintained by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Jun 14, 2022

Solid Waste Disposal Facilities and Landfills: SWF/LF

A list of permitted solid waste and landfill facilities made available by Tennessee's Department of Environment Conservation (TDEC).

Government Publication Date: Jun 2, 2022

Environmental Activities on USTs: LUST

The Tennessee Department of Environment and Conservation (TDEC) has made available a list of facilities where any type of environment-related activity has occurred due to a tank closure, or a suspected or confirmed release. The information in this list includes the facility's name and address when the environmental activities began, and the as well as the current status of the activities taking place.

Government Publication Date: Jul 6, 2022

Tennessee Petroleum Underground Storage Tank Fund: LUST TRUST

A list of facilities which have applied for reimbursement from the Tennessee Petroleum Underground Storage Tank Fund, made available by Tennessee Department of Environment and Conservation (TDEC).

Government Publication Date: Jul 6, 2022

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of leaking storage tank sites and their Funds for reimbursement of costs related to assessment and cleanup that were removed from the Department of Environment and Conservation (TDEC) database.

Government Publication Date: Jul 6, 2022

Hazardous Waste Remedial Action Fund: HWRA

List of sites under the Hazardous Waste Remedial Action Fund (HWARF) program, maintained by Tennessee Department of Environement and Conservation (TDEC). The Division of Remediation uses the Fund to investigate and cleanup environmental problems caused by the release of hazardous substances into the environment.

Government Publication Date: Jun 14, 2022

Delisted Hazardous Waste Remedial Action Fund: DHWR

List of sites which once appeared on - and have since been removed from - the list of sites participating in the Hazardous Waste Remedial Action Fund, made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Jun 14, 2022

Underground Storage Tanks: UST

A list of tank compartments that have been reported to the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). Some of the compartments listed, are not regulated by state or federal regulations, because of the substance stored, the size of the compartment, its use, etc. This list is maintained by Tennessee Division of Underground Storage Tanks in DEC.

Government Publication Date: Jul 6, 2022

Delisted Storage Tanks: DEL STORAGE TNK

List of tank compartments is maintained by the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). The department would remove a record if the compartment is not regulated. This list contains the non-regulated tank compartments that been removed from the department's tank database.

Government Publication Date: Jul 6, 2022

Sites Remediated with Institutional Controls: INST

List of remediated sites that have institutional controls in place. This list has been made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Jun 14, 2022

Sites Remediated with Engineering Controls: ENG

This list made available by Tennessee's Department of Environment and Conservation (TDEC) is comprised of remediated sites that have engineering controls.

Government Publication Date: Jun 14, 2022

Voluntary Cleanup, Oversight and Assistance Program: VCP

The Voluntary Cleanup Oversight and Assistance Program (VOAP) overlooked by Tennessee's Department of Environment and Conservation (TDEC) offers people the opportunity to work proactively with state government to address necessary cleanup of a property to return it to productive use. In return for their efforts, participants can receive a No Further Action letter and a release of liability for areas where investigation and cleanup is conducted. This list is maintained by the Division of Remediation in Department of Environment and Conservation.

Government Publication Date: Jun 14, 2022

State Remediation Program List: SRP

The State Remediation Program (SRP) was established in 1994 within the Division of Solid Waste Management of the Department of Environmental Conservation (DEC) for the purpose of providing owners, prospective purchasers and other interested parties the means to voluntarily investigate, clean up or monitor contaminated sites not regulated under RCRA, CERCLA or the Tennessee Division of Underground Tanks (UST). This list maintained by Department of Environment and Conservation, Division of Solid waste Management - Site Remediation Program.

Government Publication Date: Jun 14, 2022

Division of Remediation Sites: REMEDIATION

List of remediation sites that are or have been under any of the program in Division of Remediation, Tennessee's Department of Environment and Conservation, including VOAP, DCERP, SRP, etc.

Government Publication Date: Jun 14, 2022

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no LUST records in Tennessee at this time.

Government Publication Date: Apr 12, 2019

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no UST records in Tennessee at this time.

Government Publication Date: Oct 14, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 20, 2022

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 20, 2022

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Drug Establishment Annual Registration: FDA REGISTRANT

A list of drug firms which manufacture, prepare, propagate, compound, or process drugs that are commercially distributed in the U.S. or offered for import to the U.S. Listing made available by the U.S. Food and Drug Administration (FDA). Includes historical records dating back to 2000. Includes only facilities which are located in the U.S.A.

Government Publication Date: Apr 9, 2019

Risk Management Plan (RMP) Rule: RMP

A list of facilities that are required to have a Risk Management Plan (RMP) in order to: identify the potential effects of chemical accidents, identify steps to prevent accidents and provide emergency response procedures should an accident occur. This list is provided by the EPA which is required by the Clean Air Act Amendments to publish regulations and guidance on chemical accident prevention.

Government Publication Date: Jun 28, 2021

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites: PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Jul 18, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills: ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Apr 30, 2022

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.
Government Publication Date: May 25, 2022

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.
Government Publication Date: Apr 30, 2022

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).
Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites: FUDS
Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.
Government Publication Date: May 26, 2021

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.
Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.
Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.
Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.
Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.
Government Publication Date: Feb 1, 2022

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.
Government Publication Date: Feb 22, 2022

Civil Enforcement Action Cases without Associated Facilities: CEA2

This database tracks civil, judicial, and administrative federal EPA enforcement cases, and is from the Integrated Compliance Information System. ICIS tracks enforcement actions taken against companies or individuals. Therefore, the ICIS case name may not exactly correspond to the facility name for ICIS records linked via FRS to facility records from other program office data systems.This dataset is provided by the EPA. This is a listing of cases where there are no facilities associated with a case.
Government Publication Date: Apr 30, 2022

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.
Government Publication Date: Mar 15, 2016

Uranium Mill Tailings Radiation Control Act Sites: URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Aug 1, 2022

Integrated Compliance Information System for Air: ICIA

ICIS-Air contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners (automobiles and other mobile air pollution sources are tracked by a different EPA system). ICIS-Air records included in the download files are those where the operating status is planned (has applied for a construction permit), under construction, operating, temporarily closed, seasonal, or permanently closed. This is provided by the EPA.

Government Publication Date: Jul 2, 2022

Superfunds Consent Decrees: CONSENT DECREES

A list of Superfund consent decrees made available by the Department of Justice, Environment & Natural Resources Division (ENRD).

Government Publication Date: May 18, 2022

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Occupational Safety and Health Administration Enforcement Data: OSHA

This dataset includes information regarding the impetus for conducting the inspection, and details on citations and penalty assessments resulting from violations of OSHA standards. Additionally, accident investigation information is provided, including textual descriptions of the accident, and details regarding the injuries and fatalities which occurred. Provided by the US Department of Labor.

Government Publication Date: May 12, 2022

Civil Enforcement Actions: CEA

This database tracks civil, judicial, and administrative federal EPA enforcement cases, and is from the Integrated Compliance Information System. ICIS tracks enforcement actions taken against companies or individuals. Therefore, the ICIS case name may not exactly correspond to the facility name for ICIS records linked via FRS to facility records from other program office data systems.This dataset is provided by the EPA.

Government Publication Date: Nov 26, 2021

Criminal Enforcement Actions: CRIM

Criminal Enforcement Actions database that is maintained by the US environmental protection agency (EPA) which reports criminal enforcement cases for all environmental statutes

Government Publication Date: Jun 17, 2022

EPA Dockets: DOCKETS

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. The EPA DOCKETS system was decommissioned in 2002.

Government Publication Date: Dec 22, 2005

Permit Compliance System (PCS): PCS

Permit Compliance System (PCS) database that is maintained by US Environmental Protection Agency (EPA) provides historic water discharge permit information by state. The Permit Compliance System (PCS) is gradually being replaced by the modernized system called Integrated Compliance Information System (ICIS).

Government Publication Date: Nov 12, 2012

Federal National Pollutant Discharge Elimination System (NPDES): NPDES

ICIS-NPDES is an information management system maintained by the Office of Compliance at the US Environmental Protection Agency (EPA) to track permit compliance and enforcement status of facilities regulated by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act (CWA). ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

Government Publication Date: Jan 15, 2022

Financial Assurance Summary: FINA

RCRA regulated Treatment, Storage, & Disposal (TSD) sites with Financial Assurance coverage, listed on the Financial Assurance Summary made available by the US Environmental Protection Agency (EPA).

Government Publication Date: May 26, 2022

Biennial Reporting System (BRS): BRS

The Biennial Reporting System (BRS) database manitained by the Environmental Protection Agency (EPA) that contains biennial reports submitted by generators of hazardous wastes and facilities that treat, store or dispose of hazardous wastes.

Government Publication Date: Dec 16, 2016

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Enforcement and Compliance Data (ECHO): ECHO

ECHO data focuses on compliance and enforcement-related information for regulated facilities, including permit data, inspection/compliance evaluation dates and findings, violations of environmental regulations, enforcement actions, and penalties assessed. The data encompasses facilities related to air emissions, surface water discharges, hazardous waste, and drinking water systems. The information contained in ECHO is made available to the public by the U.S. Environmental Protection Agency (EPA) for information purposes only.

Government Publication Date: May 5, 2021

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Jul 28, 2022

Civil Cases and Settlements: CIVIL CASES

A listing of significant civil and cleanup cases and settlements from 1998 and onwards, made available by the United States Environmental Protection Agency (US EPA). This is not a complete list of all enforcement actions taken by or on behalf of EPA. Rather, it represents a subset of enforcement cases, taken civil judicially or administratively, which may be of national interest. Most of the settlements are civil judicial consent decrees resolving alleged violations of environmental laws (e.g., the Clean Air Act, the Clean Water Act); this listing does not include: most administrative enforcement actions; most civil judicial cases resolving liability under CERCLA; criminal enforcement matters.

Government Publication Date: Jul 15, 2022

National Compliance Database System - Case Listings: NCDB CASE LIST

Case listings from the National Compliance Database System (NCDB), the historical repository for national data from the United States Environmental Protection Agency's ten regional and Headquarters FIFRA/TSCA Tracking System (FTTS). Data collected in the regional FTTS was transferred to NCDB to support the need for monitoring national performance of the following programs: Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Toxic Substance Control Act (TSCA) , Emergency Planning and Right-to-Know Act, Section 313 (EPCRA) , Asbestos Hazard Emergency Response (AHERA). EPA's Integrated Compliance Information System (ICIS) is the current system of record for this data since 2006.

Government Publication Date: Sep 1, 2006

National Compliance Database Information - Facility Inspection: NCDB FAC INSP

Facility inspection information from the National Compliance Database (NCDB), the historical repository for national data from the United States Environmental Protection Agency's ten regional and Headquarters FIFRA/TSCA Tracking System (FTTS). Data collected in the regional FTTS was transferred to NCDB to support the need for monitoring national performance of the following programs: Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Toxic Substance Control Act (TSCA) , Emergency Planning and Right-to-Know Act, Section 313 (EPCRA) , Asbestos Hazard Emergency Response (AHERA). Since October 2006, the EPA has been entering new inspection information into the Integrated Compliance Information System (ICIS), the current system of record for this data.

Government Publication Date: Sep 1, 2006

Hazardous Waste Compliance Docket Facilities: DOCKET HW

This list of the Federal Agency Hazardous Waste Compliance Docket Facilities is maintained by the United States Environmental Protection Agency (EPA). According to the EPA, Section 120(c) of CERCLA requires EPA to establish a listing, known as the Federal Facility Hazardous Waste Compliance Docket (Docket), of Federal facilities which are managing or have managed hazardous waste; or have had a release of hazardous waste. Thus, the Docket identifies all Federal facilities that must be evaluated to determine whether they pose a risk to human health and the environment and it makes this information available to the public.

Government Publication Date: May 6, 2021

State

NPDES Permit Listing: NPDES

A list of National Pollutant Discharge Elimination System (NPDES) permits made available by the Tennesse Department of Environment and Conservation.

Government Publication Date: Jul 7, 2022

Drycleaner Environmental Response Program Remediation Sites: PRIORITY CLEAN

Tennessee's Department of Environment and Conservation (TDEC) Division of Remediation operates a program called the Drycleaner Environmental Response Program (DCERP). This program keeps a list of DCERP remediation sites.

Government Publication Date: Jun 14, 2022

Delisted Drycleaner Environmental Response Program Remediation Sites: DELISTED DCER

The list of Drycleaner Environmental Response Program, maintained by the Tennessee's Department of Environment and Conservation Division of Remediation, would remove a record if the program finished the remediation. This list contains all such records that has finished remediation.

Government Publication Date: Jun 14, 2022

Registered Drycleaner Facilities List: DRYCLEANERS

The Drycleaner Environmental Response Program (DCERP) of the Department of Environment and Conservation maintains a list of registered drycleaner facilities.

Government Publication Date: Mar 7, 2022

Delisted Drycleaners List: DELISTED DRYCLEANERS

List of sites removed from the drycleaners database made available by the Department of Environmental and Conservation.

Government Publication Date: Mar 7, 2022

Registry of Contaminated Properties: CDL

The Department of Environment and Conservation (DEC) maintains a registry of all properties reported by a law enforcement agency that have been under order of quarantine for at least sixty (60) days. These properties have been quarantined due to the criminal activities associated with Clandestine Methamphetamine Laboratories (CML). This list is maintained by The Department of Environment and Conservation (TDEC).

Government Publication Date: Mar 4, 2022

Spills, Emergency Response Data: SPILLS

An inventory of spill locations reported to Tennessee Emergency Management Agency. This list made available by Tennessee Emergency Management Agency (TEMA).

Government Publication Date: Jul 22, 2015

Statewide Petroleum Incident Logging Section (SPILS) List: SPILS

Tenneessee's Statewide Petroleum Incident Logging Section (SPILS) is a new program within the Tennessee Department of Environment and Conservation (TDEC)'s Division of Solid Waste Management (DSWM). The SPILS program log incidents along Tennessee's roadways where a reportable quantity of petroleum products is released to the environment, ensuring that appropriate cleanup standards are applied, remediation activities are completed, and final reports detailing the response are received and reviewed.

Government Publication Date: Jun 2, 2022

Solid Waste Management (SWM) Complaints: SWM COMPLAINT

List of Solid Waste Management (SWM) complaints in the Tennessee Department of Environment & Conservation (TDEC) Dataviewer.

Government Publication Date: Jan 25, 2021

Hazardous Waste Management Facilities: HWM

List of Hazardous Waste Management Facilities made available by Tennessee's Department of Environment and Conservation. Includes Active, Inactive, Closed, Open, Operating, and Not Operating facilities. This is not a complete list of hazardous waste management facilities permits in the state of Tennessee.

Government Publication Date: May 26, 2022

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Re: 295 Red Sox Lane

Sir/Madam:

Our research of your request regarding outstanding fire code violation, for the above address, 295 Red Sox shows that we have **f**iles for this location and **NO** outstanding violations. We show no records of hazardous storage, spill, releases, and underground/aboveground tanks in our office. If you need information about **fire reports,** please call **901.636.5429**, for all FOIA quick research email all inquiries to us at ***fire.prevention@memphistn.gov***. Last fire inspection completed 7.30.20.

Also, please be advised that the following fee schedule is applied for purchases of inspections, 1st page $10.00 each additional page-$1.00. Certified funds or money order must be made payable to City of Memphis, prior to release of records.

If this inspection is regarding hazardous materials for a property, you may contact the **SORT** office at **Fire Training at 901.636.5724**. I hope that this response adequately addresses your request. If there are any further questions, please contact our office at 901.636.5670.

Respectfully,

City of Memphis-Division of Fire Service

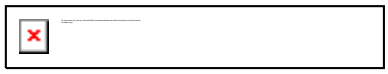
Subject: Public Records Request



Formstack Submission For: Public Records Request (RDA SW35)

Submitted at 08/26/22 5:09 PM

Requestor's Name:	Steffen Matthews
Phone:	(901) 229-3291
Requestor's E-mail:	smatthews@ensafe.com
Is this request for information related to anticipated or existing litigation?:	No
Is the requestor a Tennessee citizen?:	Yes
Request::	Copy/Duplicate
If costs for copies are assessed, the requestor has a right to receive an estimate. Do you wish to waive your right to an estimate and agree to pay copying and production costs in an amount not to exceed the amount entered by the requestor below?:	No
If yes, then initial below:	
Dollar amount to not exceed:	
Delivery Preference::	Electronic

Select the FROM timeframe date or SPECIFIC DATE for the record(s) sought.:	Dec 01, 2021
Select the TO timeframe date, if needed.:	Aug 26, 2022
What type of record are you requesting?:	Division of Remediation and Division of Underground Storage Tanks files related to the following from December of 2021 to present: • McKenzie (Lane Auto Salvage) – 433 North Waldran – SWM Complaint No. 46636 • Dixie Homes – 916 Poplar Avenue, Memphis, TN - DOR Site ID: 79846, Facility ID: NRS790000198 • Exxon Mobil/Memphis Bulk Plant – 432 N Dunlap, Memphis, TN – DOR Site ID: SRS 790769, UST Facility ID: 9799001 • Church's Fried Chicken – 925 Poplar Ave, Memphis, TN – DOR Site ID: SRS790379 • Southern Steel – 431 Dunlap, Memphis, TN – DOR Site ID: SRS791072 • Memphis Mental Health Institute/Lebonheur Hospital – 865 Poplar, Memphis, TN – DOR Site ID: SRS791119 • BP/Amoco Oil Station # 767/# 18440 – 821 Poplar Avenue, Memphis, TN – UST Facility ID: 9791083 • Success Cleaners – 1000 Jefferson Avenue, Memphis, TN – DOR Site ID:79867 • Spic-N-Span Cleaners - 813-815 Poplar Avenue, Memphis, TN – DOR Site ID: 79217 • VA Medical Center – 1030 Jefferson Avenue, Memphis, TN – UST Facility ID: 790807, EPA ID: TNN000410932 • Memphis Steam Laundry – 941 Jefferson Avenue, Memphis, TN – DOR Site ID: 79855 • Auto Chlor System – 746 Poplar Avenue, Memphis, TN – UST Facility ID: 9790057, DOR Site IDs: 79774, SRS791083 • Extra Express Market/7-Eleven #25559 – 777 Poplar Avenue, Memphis, TN - UST Facility ID: 9791539 • Air Mask Service – 1010 Faxon/1010 Foxon, Memphis, TN - UST Facility ID: 9791109 • The Med Adam's Build – 842 Jefferson Avenue,

	Memphis, TN - UST Facility ID: 9792354 • Le Bonhuer Faculty Office Building – 824 Adams St, Memphis, TN - UST Facility ID: 979903
Environmental Site Assessment:	Yes
Location (City):	Memphis
Site ID:	79846, NRS790000198; SRS790769, 9799001; SRS790379; SRS791072; SRS791119; 9791083; 79867; 79217; 790807, TNN000410932; 79855; 9790057, 79774, SRS9791539; 9791109; 9792354; 979903
What subject matter or key words are related to the records being requested?:	Remediation, LUST, leaking underground storage tank, cleaners, dry cleaning
Do you know what Division this needs to go to?:	
If site specific, choose the county.:	Shelby County
If needed, upload any supporting documents or maps. :	
Signature of Requestor:	View Signature

EJScreen EJ Indexes

Twelve environmental justice (EJ) indexes of EJScreen, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. The index values below are for the Census block group or 1-mile maximum (US or State) in which the facility is located. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJScreen provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJScreen home page.

Show EJ Indexes calculated based on: Census Block Group - US

Census Block Group EJ Indexes (percentile)	
Particulate Matter 2.5	78.4
Ozone	78.8
Diesel Particulate Matter	83.1
Air Toxics Cancer Risk	85.3

Demographic Profile of Surrounding Area (1 mile)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2015 - 2019 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary.

PROPOSAL CLIENT CHECKLIST
ASTM E 1527-13 Phase I Environmental Site Assessment

Mark X	1. Applicability
	Please identify from the list below all applicable reasons for requesting this Phase I Environmental Site Assessment:
☐	a. Person seeking to establish the innocent landowner defense to CERCLA
☐	b. Person seeking to establish the bona fide prospective purchaser liability protection
☐	c. Person seeking to establish the contiguous property owner liability protection
☐	d. Person conducting site characterization and assessments with the use of a (Brownfields) grant awarded under CERCLA
☒	e. As part of due diligence prior to purchase
☒	f. To obtain financing
☐	g. Prior to selling the property
☐	h. Renewing a lease
☐	i. Terminating a lease or vacating a property
☐	j. In anticipation of a property/business ownership transaction
☐	k. To establish baseline conditions at the property
☐	l. To identify potential business environmental risks associated with the property
☒	m. Other (please explain) (4% LIHTC Application with THDA)

Yes	No	2. Communication Responsibilities
		The user of the Phase I ESA is responsible for obtaining the following information that will help the environmental professional (EnSafe) identify the possibility of recognized environmental conditions. Answers may be conveyed verbally or in writing.
☒	☐	a. Are there any environmental cleanup liens or activity and land-use limitations filed or recorded against the subject property under federal, tribal, state, or local law, based on review of recorded land titles and judicial lien records? If yes, **<enter text here>** Title Review is under way. to determine any and all environmental cleanup liens or activity and land-use limitations filed or recorded against the subject property. Entire site is subject to BVA
☒	☐	b. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, **<enter text here>** Property was subject to environmental remediation as part of redevelopment project. Specific site is subject to a witness barrier (part of O&M Plan). Conducting ESA Phase I to determine any environmental issues on remaiing portion as part of due diligence for Tax Credit Application
☐	☐	c. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? In other words, what is the relationship of the purchase price to the fair market value of the property, if the property were not contaminated? Long-term , nominal ground lease anticipated with the land owner (Memphis Housing Authority) - as part of Tax Credit Transaction (New Construction)
☐	☐	If you conclude that there is a difference, is the lower purchase price related to contamination that is known or believed to be present at the property? N/A
☒	☐	d. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (i.) What are the past uses of the property? Former Public Housing Site (ii.) What specific chemicals are present or once were present at the property? (iii.) Do you know of spills or other chemical releases that have taken place at the property? (iv.) Do you know of any environmental cleanups that have taken place at the property? (v.) Do you have other information relevant to the ESA? **<enter text here>**
☒	☐	e. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? If yes, **<enter text here>** The overall site is subject to a Brownfield Voluntary Agreement and a witness barrier/O&M Plan that was provided to the environmental consultant. A portion of the specific site has a witness barrier delineated area.

Mark X	3. Special Reporting Requirements (if applicable)
	Specify whether you, your client, and/or lender have special requirements for the ESA, beyond that of 40 CFR 312.
☒	a. No additional requirements apply to this Phase I ESA.
☒	b. Additional requirements apply and have been attached. Project has HUD financing and NHTF financing

PROPOSAL CLIENT CHECKLIST
ASTM E 1527-13 Phase I Environmental Site Assessment

Mark X	4. ASTM Non-Scope Consideration and Risk Issues
	Please review the following list of business environmental risk issues. If you desire any of these issues be addressed, please check the appropriate box, and an EnSafe representative will contact you, as necessary, to discuss further and determine whether modifications to the attached cost estimate will be necessary.
☐	a. Asbestos-Containing Materials
☐	b. Biological Agents
☐	c. Cultural and Historic Resources
☐	d. Ecological Resources
☐	e. Emerging contaminants (including substances not defined by CERCLA as hazardous substances, e.g., PFAS)
☐	f. Endangered Species
☐	g. Environmental Regulatory Compliance
☐	h. Health and Safety Compliance
☐	i. Indoor Air Quality
☐	j. Industrial Hygiene
☐	k. Lead-Based Paint
☐	l. Lead in Drinking Water
☐	m. Mold
☐	n. Radon
☐	o. Vapor Intrusion
☐	p. Wetlands
☐	q. Other (please specify) **<enter text here>**
☒	r. We do not desire additional consideration for non-scope items in the Phase I ESA report.

Yes	No	5. SBA Environmental Investigation
☐	☒	Is this Phase I ESA being conducted to satisfy environmental policy requirements of the Small Business Administration (SBA), or is SBA otherwise involved in lender or development aspects of this property?

6. Report Addressed

Please specify the following information for each person/company/entity to which the report must be addressed. This information will appear on the title page of the report.

Name: Brian Thomas
Title: Developer
Company: Pennrose
Address: 675 Ponce de Leon Avenue, NE, Suite 8500,
City, State Zip: Atlanta, GA, 30308
Phone: 404-759-1733
Email: bthomas@pennrose.com

7. Report Distribution

Reports will be provided electronically, unless otherwise specified. Email reports to: bthomas@pennrose.com; mstraub@pennrose.com
If hard copies are requested, please provide name, company, and shipping address: dpayne@memphisha.org; lphillips@memphisha.org

8. Site Contact(s)

Please identify contact information for EnSafe to gain access to the property:

Deborah Payne, Memphis Housing Authority
Phone: 901-544-1827

9. Property Location Description

Please provide a site description and/or "as-is" site map showing the property boundaries and developments.

Re: Phase I Environmental Site Assessment Report
Block A of the Legends Park Subdivision — Memphis, Tennessee

Dear Mr. Thomas,

EnSafe is pleased to provide the enclosed Phase I Environmental Site Assessment Report. If you have any questions or require additional information, please contact me at 901-372-7962 or bkathir@ensafe.com.

Respectfully submitted,

EnSafe Inc.

EXECUTIVE SUMMARY

EnSafe Inc. performed a Phase I Environmental Site Assessment (ESA) of Block A of the Legends Park Subdivision in Memphis, Shelby County, Tennessee (subject property) in general conformance with the ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13[1] (ASTM 2013). The goal of this Phase I ESA is to identify evidence of *recognized environmental conditions*.[2] Additionally, EnSafe reviewed information regarding non-scope issues related to compliance with National Environmental Policy Act environmental factors following National Housing Trust Fund guidance. The findings, conclusions, and environmental professional opinion in this Phase I ESA report result from interviews; historical, government, and physical setting resource review; and subject property reconnaissance on December 1 and 8, 2021.

This environmental assessment has identified the following associated with the subject property:

- The Brownfield Voluntary Agreement (BVA) Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and dry cleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, this Land Use Restriction 1) prohibits the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a Tennessee Department of Environmental Conservation (TDEC)-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in environmental database records and historical city directories for the year 1921 (EnSafe 2020). No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information is provided in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners may have operated as a dry cleaner.

- The west and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjacent property. In accordance with BVA Site ID 79-846, to prevent exposure to the

1 ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

2 ASTM defines a *recognized environmental condition* as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment."

PAH contaminants, the soil is contained beneath an orange "witness barrier" (safety fencing) and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored regulated materials including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products.

This assessment has revealed evidence of the following *recognized environmental condition* and *controlled recognized environmental condition* in connection with the subject property: [3]

- BVA Site ID 79-846 includes the subject property and adjoining properties west and south of the subject property. The BVA outlines environmental conditions identified upgradient of these properties that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and dry-cleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property.

- The subject property is subject to Land Use Restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*.

This executive summary is an excerpt of a detailed Phase I ESA report that includes elements necessary for proper interpretation, including any limitations, exceptions, and deletions to ASTM 2013 and established scope of work. As such, the executive summary should not be used independently of the Phase I ESA report and its supporting documentation.

[3] ASTM defines a *controlled recognized environmental condition* as "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

1.0 INTRODUCTION

EnSafe Inc. was retained by PennRose to conduct a Phase I Environmental Site Assessment (ESA) of Block A of the Legends Park Subdivision in Memphis, Shelby County, Tennessee (subject property), as shown on Figure 1 (Appendix A). The subject property consists of approximately 4 acres of a 4.77-acre vacant grass-covered parcel identified as Shelby County Parcel 051017 00018 which occupies most of a city block bound by Peach Avenue, Decatur Street, Delmar Avenue, and Ayers Street. Figure 2 (Appendix A) is a Site Layout Map, which shows the subject property and surrounding area.

1.1 Purpose

The subject property was assessed with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and petroleum products. This assessment is intended to constitute all appropriate inquiries (AAI) into the previous ownership and uses of the property consistent with good commercial and customary practice as defined in 42 United States Code Section 9601 (35)(B) and promulgated at 40 Code of Federal Regulations Part 312 (AAI Final Rule). As such, the assessment is intended to permit the designated *user* to satisfy one of the requirements to qualify for the innocent landowner, bona fide prospective purchaser, or contiguous property owner limitations on CERCLA liability (hereinafter, the Landowner Liability Protections).

The ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation E1527-13 (ASTM 2013)[1] is the current industry standard used to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate. The goal of a Phase I ESA is to identify evidence of *recognized environmental conditions,* defined by ASTM as, "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

In accordance with ASTM 2013, this Phase I ESA was also intended to identify the following:

- *Controlled recognized environmental condition:* "a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been

[1] ASTM issued E1527-21 on November 1, 2021; however, EnSafe will continue to use E1527-13 until the United States Environmental Protection Agency approves the use of E1527-21 to comply with the requirements for all appropriate inquiries under 40 Code of Federal Regulations 312.

addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Historical recognized environmental condition:* "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

- *Business environmental risk:* "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."

- *De minimis condition:* "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." A condition found to be *de minimis* is not a *recognized environmental condition* or *controlled recognized environmental condition*.

1.2 Scope of Services

The Phase I ESA includes the following:

- Visual assessments of the subject property on December 1 and 8, 2021, by Ms. Bavani Kathir and Mr. Steffen Matthews of EnSafe; resumes are included in Appendix B.

- Interviews with personnel are discussed in Section 3.1.

- Review of standard and additional federal, state, and local environmental records sources for the subject property and properties within ASTM 2013 approximate minimum search distances (AMSDs). Database search information is provided in Appendix C.

- Review of the following historical resources and land-use records; select copies and printed information is provided in Appendix D:

  — United States Geological Survey topographic maps
  — Aerial photographs
  — Fire insurance maps
  — City directories

- Review of the physical setting report provided by Environmental Risk Information Services, as documented in Appendix E.

- Review of regulatory information available from the United States Environmental Protection Agency (U.S. EPA) Envirofacts website, regulatory files available through the Tennessee Department of Environment and Conservation (TDEC), and information on TDEC websites. Select information is provided in Appendix F.

- Review of the user questionnaire provided to the Client and completed by Mr. Brian Thomas, PennRose Developer, as documented in Appendix G.

- Photo Log is provided in Appendix H.

1.3 Client Information and User Responsibilities

EnSafe was retained by PennRose to conduct the Phase I ESA. According to ASTM, the *user* shall make known the reason for the Phase I ESA. In contracting EnSafe for the Phase I ESA, Mr. Brian Thomas of PennRose, indicated the Phase I ESA was being conducted as part of due diligence before purchase and to obtain financing.

The AAI Final Rule and Section 6.0 of ASTM 2013 describe tasks to be performed by the *user* that are required to qualify for a Landowner Liability Protections to CERCLA liability. The information that results from those tasks should be provided to the environmental professional to consider with respect to identifying *recognized environmental conditions*. Appendix G contains a questionnaire provided to the *user* outlining those tasks.

1.4 Non-Scope Items

At the request of PennRose, and as documented in Appendix G, EnSafe's Phase I ESA scope of work was expanded to include consideration of non-scope environmental issues or considerations that are beyond the scope of ASTM 2013. Desktop reviews of non-scope information are summarized in Section 5 and additional supporting information is presented in Appendix I.

2.0 PHYSICAL SETTING

Table 1 summarizes information obtained from the physical setting report (Appendix E) and other sources reviewed during the Phase I ESA listed in Section 1.2.

Table 1
Physical Setting Summary

Topography	
Elevation (feet above mean sea level)	254 to 269
Topography	The central portion of the subject property is higher in elevation than the property perimeter. Additionally, the central-east portion is higher than the central-west portion.
Evidence of landfilling (e.g., areas graded by non-natural causes or filled with material of unknown origin, and mounds or depressions) or excavation	Soil from other areas within the Legends Park Subdivision was stockpiled and used as fill on the subject property, which is further discussed in Section 3.
Adjoining — higher elevation	East-southeast
Adjoining — lower elevation	Southwest
Surface Water and Subject Property Drainage	
Subject property surface water features	None
Adjoining surface water features	None
Nearest water body	Quimby Bayou
Direction and approximate distance to nearest water body	The Quimby Bayou is located approximately 735 feet west of the subject property
Storm Water management	Storm water not infiltrating grass surfaces on the subject property is expected to flow towards adjoining streets equipped with storm sewer drains.
Flood zone (summarized from Appendix E)	The subject property is not mapped within the 100 or 500-year flood zones.
Wetlands (summarized from Appendix E)	No wetlands are mapped on the subject property.
Geology	
Soil types (and estimated depths/thickness)	The environmental database report describes subject property soils as graded and filled land consisting of silt loam from 0 to 59 inches below ground surface. These soils have moderate infiltration rates and are moderately well and well-drained.
Bedrock (depth and type)	Greater than 1,500 feet below ground surface
Hydrogeology	
Wells on subject property	None
Approximate depth to groundwater (feet) at the subject property	Not provided in sources reviewed
Reported direction of groundwater flow at the subject property	Not provided in sources reviewed
Relevant surrounding property wells	Two sentinel groundwater monitoring wells installed at 918 and 934 Poplar Avenue (within the Legends Park Subdivision), Memphis, Tennessee are approximately 0.20- and 0.25-mile southwest of the subject property.
Approximate depth to groundwater (feet)	12.00 to 24.84
Reported direction of groundwater flow	North and Northwest

3.0 SUBJECT PROPERTY

Subject property information discussed below was obtained from interviews and sources identified in Section 1.2 and referenced in Section 6.

3.1 Interviews

Table 2 lists personnel interviewed, indicates their association with the subject property or this Phase I ESA, and summarizes topics discussed and information provided. Table 2 also lists local and state agencies from which EnSafe requested information and the results of those inquiries.

Table 2
Summary of Interviews

Name	Affiliation	Association with Subject Property	Time [1]	Information Provided/Section Discussed
Ms. Deborah Payne	Memphis Housing Authority	Key Site Manager, Current Owner	13	Ms. Payne provided information regarding current and historical subject property operations and provided layout maps. Information provided is discussed in Section 3.
Mr. Mike Swindle	Memphis Housing Authority	Key Site Manager, Current Owner	17	Mr. Swindle provided information regarding current and historical subject property operations and provided layout maps. Information provided is discussed in Section 3.
Ms. Luretha Phillips	Memphis Housing Authority	Current Owner	25	Ms. Phillips provided information regarding current and historical subject property operations and provided layout maps. Information provided is discussed in Section 3.
Mr. Geoff Pope	Terminix, former Tetra Tech Project Manager for Legends Park	Project Manager	5	Mr. Pope provided information regarding prior environmental activities conducted at the Legends Park Subdivision site. Information provided is discussed in Section 3.
Ms. Alison Campany	TDEC — Division of Remediation	Local Official	19	Ms. Campany provided information regarding Legends Park and surrounding area environmental database listings. Information provided is discussed in Sections 3 and 4.

Summary of Records Requests

Name	Agency	Result of Inquiry/Section Discussed
Ms. Alison Hensley	TDEC — Division of Remediation	Records identified/Section 4
Ms. Nicole Beers	TDEC — Memphis Environmental Field Office	Records identified/Section 4

Notes:
[1] Length of time or number of years the person has been affiliated or familiar with the subject property or surrounding area.
TDEC = Tennessee Department of Environment and Conservation

3.2 Prior Environmental Assessments

EnSafe performed a prior Phase I ESA of the subject property in November 2020. Findings from the 2020 Phase I remain consistent with EnSafe's 2021 Phase I, which are discussed throughout this report. PennRose did not provide EnSafe with any prior environmental assessments of the subject property. Prior site investigations conducted at the subject property were obtained through a TDEC public records request. These records are further discussed in Section 3.6.

3.3 Historical Development and Uses

The historical document review and interviews were conducted to identify evidence of *recognized environmental conditions* in connection with past uses of the subject property.

3.3.1 Historical Development

The earliest historical resource obtained and reviewed for this Phase I ESA is an 1897 fire insurance map which shows subject property developed with numerous residential buildings along the east, south, and west portions, with a run (small stream) traversing the north portion. The subject property remains primarily residential except for a few shops/storefronts along Decatur Street observed on the 1907 fire insurance map. Additionally, the small stream is no longer observed on the subject property by 1907. The 1916 and 1927 topographic maps depict multiple small structures in the central portion of the subject property and along the east and west property boundaries. A 1937 aerial photograph shows multiple-unit residential buildings constructed throughout the subject property, except on the eastern portion. The 1951 and 1952 fire insurance maps indicate that the Dixie Homes Apartments residential buildings were constructed between 1936 and 1937. Additionally, the 1951 and 1952 fire insurance maps also depict apartment buildings on the east portion of the subject property constructed in 1950. The subject property remains relatively unchanged in subsequent aerial photographs reviewed through 2006, except for the construction of Interstate 40 and rerouting of Peach Avenue along the north subject property boundary between 1969 and 1973. By 2007, the buildings have been razed and the subject property appears to be a vacant unpaved and grass-covered lot. The 2010 aerial photograph shows the subject property cleared of most vegetation in preparation for development and construction activities. By the 2012 aerial photograph, the subject property is grass-covered. No significant changes were noted on aerial photographs reviewed from 2012 to 2018.

City directories were available for review at three to six-year intervals from 1932 through 2020. The subject property had multiple addresses associated with residential buildings between 1932 and 2005: 945 to 1001 Peach Avenue, 319 to 347 Decatur Street, and 980 Delmar Avenue. EnSafe's prior November 2020 Phase I ESA (EnSafe 2020) identified one subject property address,

335 Decatur Street, as Minkie Jos, a potential former dry cleaner, which is listed in the 1921 city directory. On the south-adjoining property, one property address, 311 Decatur Street, was identified as Gordon Cleaners and Dyers (a potential former dry cleaner) in the 1932 city directory. The dry cleaner listings are discussed further in Section 3.6.

3.3.2 Historical Uses and Operations

Based on historical sources reviewed, the subject property has been developed since at least 1897. Historical records indicate the subject property was residential in 1897 and remained primarily residential until 2006. According to Mr. Swindle with the Memphis Housing Authority (MHA), the former Dixie Homes, a public housing development, began construction in 1937; the former public housing development included the subject property parcel and multiple parcels to the south. According to Ms. Deborah Payne, the MHA acquired title to the Dixie site from the United States Housing and Home Finance Agency and Public Housing Administration in April 1951 and 1953. Based on information provided by MHA representatives, the housing development remained relatively unchanged until the buildings were razed in 2006. Based on environmental records reviewed (Section 3.6), pre-construction activities, including various environmental assessments and investigations, were conducted for the Legends Park Subdivision (including the subject property) between 2006 and 2012. According to Ms. Luretha Phillips with the MHA, building construction within the Legends Park Subdivision began in 2009. According to Mr. Swindle, the subject property was used to stockpile soil from the Legends Park Subdivision construction and environmental activities (2009 to 2012). The subject property has remained vacant since approximately 2012.

3.4 Current Uses

The subject property was visually assessed on December 1 and 8, 2021, by Ms. Kathir and Mr. Matthews of EnSafe. The purpose of the site reconnaissance was to determine current uses and to identify evidence of *recognized environmental conditions* in connection with the subject property. Photographs taken during the site visit are in Appendix H. EnSafe personnel walked throughout the subject property unaccompanied. Adjacent and surrounding area properties were observed from the subject property boundaries and nearby roads and driveways.

The subject property comprises approximately 4 acres of vacant land within the Legends Park Subdivision. Ms. Payne stated she was not aware of any current operations or uses associated with the subject property. MHA representatives were also not aware of any groundwater water wells, septic tanks/systems, underground storage tanks, aboveground storage tanks, and/or any utility services associated with the subject property.

3.5 Interior and Exterior Observations

Table 3 lists environmental issues and identifies those present or applicable to the subject property, based upon EnSafe's visual observations of the interior and exterior, interviews, review of environmental records sources, regulatory research, and other publicly available and reasonably ascertainable information.

Table 3
Subject Property Observations

Current or Past Use	Present or Applicable	Comment/Report Section
Hazardous Substances and Petroleum Products	**No**	—
Storage Tanks	**No**	—
Odors (strong, pungent, or noxious)	**No**	—
Pools of Liquids	**No**	—
Drums (5 gallons and larger)	**No**	—
Unidentified Substance Containers	**No**	—
Polychlorinated Biphenyls (associated with electric or hydraulic equipment)	**No**	—
Fuel Source for Heating and Cooling Systems	**No**	—
Stains or Corrosion (on building walls, floor, and ceilings)	**No**	—
Floor Drains, Sumps, and Pits	**No**	—
Pits, Ponds, or Lagoons	**No**	—
Stained Soil or Pavement	**No**	—
Stressed Vegetation	**No**	—
Solid Waste	**Yes**	Windblown trash (e.g., food wrappers, drink containers) was observed along the north and east subject property fence line areas. Additionally, a pile of discarded automobile tires and a discarded individual tire were observed along the east fence line.
Hazardous Waste	**No**	—
Wastewater	**No**	—
Wells	**No**	—
Septic Systems or Cesspools	**No**	—

3.6 Environmental Records Review

EnSafe obtained standard environmental record source information directly from a commercial service and the U.S. EPA and TDEC. The Legends Park Subdivision (former Dixie Homes), which includes the subject property, was identified on the State Remediation Program (SRP), Voluntary Cleanup Program, and Brownfield and Institutional Control sites databases.

The subject property is part of the Legends Park Subdivision/former Dixie Homes SRP site. According to Ms. Alison Campany with the TDEC Division of Remediation (DOR), the MHA has entered into multiple Brownfields Voluntary Agreements (BVA) to address impacts to soil, soil gas, and groundwater on various lots within the site that are planned for future residential development and use. Based on the regulatory information reviewed, BVA Site ID 79-846 (hereinafter referred to as the BVA site) includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient of the site that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and dry-cleaning solvents in soil gas. Based on TDEC records reviewed, groundwater samples were collected from two sentinel wells (SW-1 and SW-2) on the southwest corner of the site between October 2010 and July 2012; samples were analyzed for volatile organic compounds. Chlorinated solvent detections exceeded the U.S. EPA drinking water maximum contaminate levels. TDEC records indicate volatile organic compound impacts to site groundwater likely originated from historical uses associated with properties further south.

Because the BVA site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, this Land Use Restriction 1) prohibits the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, other than polyaromatic hydrocarbons (PAHs), the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

EnSafe's prior November 2020 Phase I ESA identified one subject property address, 335 Decatur Street, in the environmental database for the year 1921. The address occupant at that time is listed as Minkie Jos, a former clothes cleaner and presser. No additional information is provided in the 2020 database report; however, it is important to note that historical documents identify a storefront at this address and Minkie Jos may have operated as a dry cleaner. On the south-adjoining property, Gordon Cleaners and Dyers, a former clothes cleaner and presser, is identified in the 1932 historical city directory at 311 Decatur Street. No additional information is provided in historical and database resources obtained for this 2021 Phase I ESA; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners may have operated as a dry cleaner.

4.0 AREA RECONNAISSANCE

The current and historical uses of adjoining and surrounding area properties described below are based upon visual observations during the site reconnaissance and information obtained from interviews, historical research, and regulatory research conducted for the subject property. A commercial environmental database company provided a database search report that made environmental records for surrounding area properties within the ASTM-defined AMSDs reasonably ascertainable. Sites listed in the environmental records search within the ASTM-defined search distances for the databases on which they appear are discussed in Sections 4.1 through 4.3.

4.1 Adjoining Properties

The current and historical adjoining property uses and operations are summarized below.

4.1.1 North

The subject property is adjoined to the north, beyond Peach Avenue and Interstate 40, by vacant grass-covered parcels and Carnes Elementary School. Based on historical records reviewed, the north-adjoining properties were primarily residential, including a school, as early as 1897 and remained relatively unchanged through the early 1900s. The 1937 aerial photograph shows residential structures associated with the former Dixie Homes in the current location of Peach Avenue and Interstate 40, and it also shows two large buildings and numerous smaller buildings farther north. The 1951 fire insurance map shows primarily residential buildings, a church, and school buildings (Carnes Elementary School) on the north-adjoining properties. The fire insurance map indicates that the school buildings were constructed in 1920, 1939, and 1944. The north-adjoining properties appear relatively unchanged until construction of Interstate 40 and the rerouting of Peach Avenue between 1969 and 1973. Except for Carnes Elementary School and associated additions, the north-adjoining properties beyond Interstate 40 remain either residential or vacant grass-covered lots.

No environmental records were identified for the north-adjoining properties.

4.1.2 East

The subject property is adjoined to the east, beyond Decatur Street, by residential apartments and Columbus Baptist Church. Based on historical records reviewed, the east-adjoining properties were residentially developed as early as 1897. A church is observed on the 1907 fire insurance map. City directories list primarily residential addresses for the east-adjoining properties from at least 1932 until 2005 and Columbus Baptist Church from at least 1940 to 2011.

No environmental records were identified for the east-adjoining properties.

4.1.3 South

The subject property is adjoined to the south (east to west) by a vacant lot, Legends Park Townhomes, and Legends Park Apartments. Based on historical records reviewed, the south-adjoining properties were primarily residential with some shops as early as 1897 and 1907. The 1927 topographic map shows numerous small structures on the south-adjoining property, and by 1937 the property is redeveloped with residential structures associated with the former Dixie Homes. Based on historical records reviewed, the south-adjoining properties remained residential until 2007 when the area was cleared for redevelopment. The 2010 aerial photograph shows an apparent storm water detention basin on the western part of the south-adjoining property. The 2012 aerial photograph shows that the detention basin has been filled, likely when the Legends Park Apartments were constructed. According to Ms. Phillips, the Legends Park Townhomes were constructed in 2009.

The south-adjoining properties are within the Legends Park Subdivision SRP site as previously discussed in Section 3.6. In accordance with BVA Site ID 79-846 (Section 3.6), to prevent exposure to the PAH contaminants remaining in the soil, an orange plastic witness barrier was placed over impacted soil, then covered with at least 2 feet of clean fill material, between June and October 2010.

As discussed in Section 3.6, Gordon Cleaners and Dyers, at 311 Decatur Street, was identified as former clothes cleaner and presser in the 1932 historical city directory. No additional information is provided in historical and database resources obtained for this Phase I ESA; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners may have operated as a dry cleaner.

4.1.4 West

The subject property is adjoined to the west by Ayers Street then multiple residential properties. Based on historical records reviewed, the west-adjoining property was previously developed with multi-family residential lots as early as 1897, with a run/small stream traversing the northwest portion. The west-adjoining property is also designated as residential on the 1907 fire insurance map; however, the run is no longer depicted. The 1927 topographic map shows numerous small structures on the west-adjoining property, and by 1937 the property is clear of structures. The 1951 fire insurance map indicates the west-adjoining property is a playground. Based on historical records reviewed, the west-adjoining property remained a dedicated playground/park area until 2007 when the area was cleared for redevelopment. The aerial photograph from 2010 shows an apparent storm water detention basin on the west-adjoining property. The 2012 aerial photograph shows that the detention basin has been filled and the west-adjoining property is a vacant grass-covered area.

The west-adjoining property is located within the Legends Park Subdivision SRP site as previously discussed in Section 3.6. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west adjacent property. In accordance with BVA Site ID 79-846 (Section 3.6), to prevent exposure to the PAH contaminants remaining in the soil, an orange plastic witness barrier was placed over impacted soil, then covered with at least 2 feet of clean fill material, between June and October 2010.

4.2 Surrounding Area Properties

The surrounding properties have been developed with residential, commercial, and light industrial properties since at least 1897. The environmental database search identified a total of 22 sites beyond the subject property and adjoining properties. Of these sites, 12 are within the ASTM-defined approximate minimum search distances. Four additional sites were identified on the TDEC DOR website as well as one additional site on the TDEC Division of Underground Storage Tanks website within the ASTM-defined approximate minimum search distances. The 17 sites identified are summarized in Table 4.

4.3 Unmapped Sites

The environmental database search identified seven sites with environmental records which it could not map due to poor or inadequate address information. The sites were listed on the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), leaking underground storage tank, Resource Conservation and Recovery Act Non-Generators (RCRA NON GEN), DOR, and spills databases. Based on information provided in the environmental database report, TDEC online databases, and internet mapping sources, the sites are listed as closed, have received no further action, and/or are located over one-half mile from the subject property. These sites are not expected to have impacted soil, groundwater, and/or soil vapor at the subject property.

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Memphis Bulk Plant	432 North Dunlap Street	0.21-mile northwest	LUST, VCP, SRP	790769 799001	Closed, Land Use Restrictions	• Petroleum constituents detected in soil, soil gas, and groundwater. • Groundwater flows generally to the west. • Site-specific standards issued. • TDSWM approves closure with land-use restrictions in 2005.	Not expected to impact subject property based on groundwater flow
Southern Steel	431 Dunlap Street	0.23-mile northwest	VCP, SRP, Institutional Controls	791072	No Further Action	• Petroleum constituents detected in soil. VOCs and SVOCs detected in groundwater. • TDSWM approves closure with land-use restrictions in 2009.	Not expected to impact subject property based on site regulatory status and groundwater flow
Church's Fried Chicken	925 Poplar Avenue	0.26-mile south-southwest	VCP, SRP	790379	Inactive, No Further Action	• Petroleum impacts in soil and shallow groundwater. • Groundwater flow reported to the north/northwest. • SRP issued no further action required with regard to petroleum impacts on March 1, 2011.	Not expected to impact subject property based on site regulatory status and groundwater flow
Le Bonheur Hospital	865 Poplar Avenue	0.30-mile southwest	VCP, SRP	792714 791119	Closed	• EPH detected in soil samples. • SRP issued no further action required status on November 17, 2009.	Not expected to impact subject property based on soil analysis
VA Medical Center	1030 Jefferson Avenue	0.32-mile south-southeast	SEMS, LUST	TNN000410932, 790807	Closed	• One UST was removed in December 1998; TDEC DUST issued closure on November 5, 1999.	Not expected to impact subject property based on regulatory status
University Behavioral	135 North Pauline	0.33-mile south	LUST	791029	Case Closure	• One 2,000-gallon diesel UST and associated piping were removed in January 1999. • Soil detections below applicable action levels. • TDEC DUST issued case closure on July 1, 1999.	Not expected to impact subject property based on soil analysis

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Amoco	821 Poplar Avenue	0.38-mile southwest	LUST	791083	Case Closure	• Petroleum impacts identified in soil and groundwater. • TDEC DUST issued contaminated case closure on August 28, 2015.	Not expected to impact subject property based on distance from the subject property and groundwater flow
Success Cleaners	1000 Jefferson Avenue	0.39-mile south	SRP	79867	Open	• Site identified along with Memphis Steam Laundry & Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files indicate a schedule for a sampling event was proposed for June 2009; however, records reviewed do not indicate if the event took place.	Potential to impact the subject property based on possible dry cleaning operations and groundwater flow direction
Auto-Chlor System	746 Poplar Avenue	0.40-mile southwest	LUST, VCP, SRP	790057, 79774, 791083	Closed	• Petroleum hydrocarbon, VOC, and PAH impacts in soil and groundwater • Radial groundwater flow to the northwest, northeast, and southwest. • TDEC DOR issued no further action with land-use restrictions on October 26, 2016.	Not expected to impact the subject property based on distance from the subject property and soil and groundwater analysis
Spic N Span	813-815 Poplar Avenue	0.41-mile southwest	SRP, DCERP	79217	Closed	• Benzene, PCE, TCE, vinyl chloride, and 1,2-dichloroethylene were detected in groundwater above applicable action levels and benzene, PCE, and 1,2-dichloroethylene were detected in soil below applicable action levels. • DCERP authorized closure on November 13, 2007.	Not expected to impact the subject property based on distance from the subject property and soil and groundwater analysis

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Memphis Steam Laundry	941 Jefferson Avenue	0.41-mile south-southwest	SRP	79855	Open	• Site identified along with Success Cleaners site as possible source of PCE detected in groundwater samples collected at the Legends Park Subdivision site. • TDEC files indicate a schedule for a sampling event was proposed for June 2009; however, records reviewed do not indicate if the event took place.	Potential to impact the subject property based on possible dry cleaning operations and groundwater flow direction
Extra Express Market	777 Poplar Avenue	0.42-mile southwest	LUST	791539	Contamination Case Closed	• Petroleum impacted soil and groundwater identified. • TDEC DUST issued case closure on May 9, 2018.	Not expected to impact the subject property based on soil and groundwater analysis
Air Mask Service Unit	1010 Faxon Avenue	0.43-mile north	LUST	791109	Completed Tank Closure	• One 500-gallon diesel UST and associated piping drained and capped in September 1991. • Soil samples were collected from tank pit non-detected or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on February 26, 1996.	Not expected to impact the subject property based on soil analysis
The Med	842 Jefferson Avenue	0.45-mile south-southwest	LUST	792354	Contamination Case Closed	• One 20,000-gallon UST and associated piping drained and capped in July 1999. • TDEC DUST issued case closure on February 6, 2002.	Not expected to impact the subject property based on regulatory status

Table 4
Surrounding Area Environmental Database Listings

Facility Name	Address(es)	Approximate Distance from Subject Property	Database Listing(s)	Identification Number(s)	Status	Notes	Potential Impact to Subject Property
Le Bonheur	824 Adams Avenue	0.46-mile southwest	LUST	799039	Completed Tank Closure	• One 1,000-gallon UST, one 500-gallon UST, and piping were removed in August 2015. • Soil samples collected from tank pit non-detect or below applicable action levels for petroleum constituents. • TDEC DUST issued case closure on August 18, 2015.	Not expected to impact the subject property based on soil analysis
Former Scott Union	749 North Parkway	0.47-mile northwest	LUST	790606	Contamination Case Closed	• Four 4,000-gallon and one 500-gallon USTs removed in February 1993. TDEC DUST issued case closure on May 13, 1993. • Release identified during Phase II in January 2000; impacted soils excavated; TDEC DUST issued case closure on September 13, 2000.	Not expected to impact the subject property based on soil analysis
Super Stop	945 Jackson Avenue	0.48-mile north	LUST	791890	Contaminated Closure	• Three USTs removed in August 1997. • TDEC DUST issued contaminated closure on October 2, 2000.	Not expected to impact the subject property based on regulatory status

Notes:

UST	=	Underground Storage Tank	TCE	=	Trichloroethylene
LUST	=	Leaking Underground Storage Tank	PAH	=	Polynuclear Aromatic Hydrocarbon
SRP	=	State Remediation Program	TPH	=	Total Petroleum Hydrocarbons
TDSWM	=	Tennessee Division of Solid Waste Management	DOR	=	Division of Remediation
TDEC	=	Tennessee Department of Environment and Conservation			
DUST	=	Division of Underground Storage Tanks			
DCERP	=	Drycleaner Environmental Response Program			
CDP	=	Voluntary Cleanup, Oversight and Assistance Program			
SEMS	=	Superfund Enterprise Management System			
EPH	=	Extractable Petroleum Hydrocarbon			
PCE	=	Tetrachloroethylene or perchloroethylene			

5.0 ASTM E1527-13 NON-SCOPE ISSUES

EnSafe reviewed information regarding ASTM E1527-13 non-scope issues related to compliance with National Environmental Policy Act environmental factors. The development was assessed in its entirety under a National Housing Trust Fund (NHTF) guidance. The project as proposed is in compliance with ASTM non-scope issues per the NHTF guidance, as discussed in further detail herein. Supporting documentation for non-scope components of the review is included in Appendix I.

5.1 Historic Preservation

Based on the existing site conditions (formerly developed, subsequently razed) the proposed action would have No Potential to Cause Effects. Consequently, the project is in compliance with Section 106 [36 CFR 800.3(a)(1)]. Attachment 1 of Appendix I includes the SHPO correspondence.

5.2 Farmland

This project does not include any activities that could potentially convert agricultural land to non-agricultural use and is in compliance with the Farmland Protection Policy Act. Attachment 2 of Appendix I includes the Natural Resource Conservation Service web soil survey map showing that the subject property is in an urban developed area.

5.3 Airport Zones

The project site is not within 15,000 feet of a military airport or 2,500 feet of a civilian airport. The project complies with HUD Airport Hazards requirements. Attachment 3 of Appendix I demonstrates that there are no airport runway clear zone hazards associated with the proposed project. General DeWitt Spain Airport is approximately 4.25 miles north of the proposed subject property. Memphis International Airport is approximately 5.8 miles southeast of the proposed subject property. West Memphis Municipal Airport is approximately 10.4 miles to the west of the proposed subject property.

5.4 Coastal Barrier Resource System

The State of Tennessee has no coastal boundaries. Attachment 4 of Appendix I demonstrates that the subject property is not in a Coastal Barrier Resources System.

5.5 Coastal Zone Management

The State of Tennessee has no coastal boundaries. Attachment 4 of Appendix I demonstrates that the subject property is not in a Coastal Zone.

5.6 Floodplains

Federal Emergency Management Agency's Flood Insurance Rate Map 47157C0270F, effective September 28, 2007, indicates that the subject property is in Zone X, an area of minimal flood hazard. Attachment 5 of Appendix I demonstrates the proposed project site is located within Zone X of the Federal Emergency Management Agency's Flood Insurance Rate Map.

5.7 Wetlands

EnSafe conducted a desktop review of potential aquatic resources that may be present at the subject property. The purpose of the desktop review was to assess the site for wetlands and potentially jurisdictional "waters" using available aerial imagery and online databases to conduct due diligence related to §404/§401 regulations by the U.S. Army Corps of Engineers (USACE) and/or TDEC. The desktop review indicates that there no wetlands or streams exist at the subject property. A review of historical aerial photographs and aerial imagery on Google Earth shows that the property has been developed in the past but was razed in 2007, sometime between January and September. The site is near downtown Memphis and is surrounded by development, including residential housing, highways, and hospitals, so urban drainage infrastructure is present in the surrounding developed areas. Soils at the subject property are classified as "Graded land, silty materials (udorthent, silty)", which are not rated as hydric soils per the U.S. Department of Agriculture Natural Resources Conservation Service. The site walk conducted in September 2021 in conjunction with a desktop review of the National Wetland Inventory (Attachment 6 of Appendix I) demonstrates the construction of the proposed project site will not impact a jurisdictional or non-jurisdictional wetland.

5.8 Explosives and Hazards

Sixteen aboveground storage tank locations were identified within one mile of the subject property. Nine of the ASTs contain diesel fuel, three contain used cooking oil, and four contain used oil. No flammable or explosive hazards were observed on or near the subject property during the site visit or desktop review. The online acceptable separation distance assessment tool was used to calculate the acceptable safe distance for thermal radiation for people (ASDPPU) and buildings (ASDBPU). The project was found to be in compliance with the standards for acceptable separation distance, as described in 24 CFR part 51, subpart C. Attachment 7 of Appendix I presents a figure depicting locations and a table summarizing the size of the AST, contents of the AST, distance from the site to the AST, ASDPPU distance, and ASDBPU distance.

5.9 Contamination

EnSafe conducted a Phase II analysis of the subject property to verify that it is free of hazardous materials, contamination, toxic chemicals and gases, and radioactive substances

(EnSafe 2021). The Phase II report evaluated soil, groundwater, and soil gas at the Site for potential chemicals of concern associated with historical operations at the Site and surrounding area properties. The Phase II found that Volatile Organic Compounds, Extractable Petroleum Hydrocarbons, Polynuclear Aromatic Hydrocarbons, and metals were not detected above screening levels in groundwater samples.

Of ten soil samples collected and analyzed, one polynuclear aromatic hydrocarbon chemical (benzo(a)pyrene) exceeded the corresponding U.S. EPA Residential Regional Screening Levels (RSLs) in soil sampled from 4 to 8 feet bgs at SB02. Additionally, arsenic and chromium concentrations in soil were above residential and/or industrial RSLs in all ten soil samples; however, detected concentrations of arsenic and chromium in soil sampled at the Site are not statistically higher than Tennessee background concentrations. Other compounds were below corresponding soil RSLs.

Two volatile organic compounds (benzene and naphthalene) were detected above U.S. EPA residential and/or commercial Vapor Intrusion Screening Levels in soil gas at SG01 on the eastern edge of the property where parking is planned. Attachment 8 of Appendix I contains the Phase II Environmental Site Assessment report.

5.10 Noise

Noise analysis for Legends Park Block A was completed by Roland, Woolworth & Associates, LLC in 2022. The analysis determined that the Legends Park housing project should meet HUD requirements for noise if the windows on north and east/west sides of the building are upgraded to STC 31. No other changes to the facade are needed. The report is provided in Attachment 9 of Appendix I.

5.11 Endangered Species

EnSafe conducted a desktop review for the listed species and critical habitat, that may occur within the boundary of your proposed project using the Environmental Online Conservation System Information for Planning and Consultation (ECOS-IPaC) tool. The federally endangered Indiana Bat (*Myotis sodalis*) and threatened northern long-eared bat (*Myotis septentrionalis*) are known to occur in the general area. The subject property is a mostly open, mowed field surrounded by urban development, and there is no suitable roosting habitat at the Site. A few standing trees are present, but these do not have cracks, crevices, or exfoliating bark. No suitable woodland or aquatic habitat is present to support roosting or foraging habitat for the two listed bat species. No known bat hibernacula or maternity colonies exist within Shelby County, Tennessee. There are no critical

habitats within the subject property boundary. Correspondence with USFWS is included as Attachment 10 of Appendix I.

5.12 Wild and Scenic Rivers

The project does not involve any activities that are inconsistent with conservation easements, land-use protections, or restrictions adjacent to wild and scenic rivers. The Obed River, located in East Tennessee, is the only river designated as wild & scenic in the state of Tennessee.

5.13 Safe Drinking Water

The project will use lead-free pipes, solder, and/or flux for pipes used in the building's potable water system.

5.14 Sole-Source Aquifers

There are no sole-source aquifers in Tennessee. Attachment 11 of Appendix I demonstrates that the proposed project site is not within an area designated as a sole source aquifer.

6.0 RESULTS OF THE ENVIRONMENTAL PROFESSIONAL INQUIRY

EnSafe performed a Phase I ESA of Block A within the Legends Park Subdivision in Memphis, Tennessee in general conformance with the scope and limitations of ASTM 2013. Any exceptions to, or deletions from, this practice mentioned throughout the report are discussed in Sections 5.3 and 5.4.

6.1 Summary of Findings and Conclusions

Based on research performed, this Phase I ESA identified the following.

- The subject property consists of approximately 4 acres of a larger 4.77-acre vacant parcel identified as Shelby County Parcel 051017 00018 and is located within the 30.91-acre Legends Park Subdivision (former Dixie Homes housing complex). The subject property is bound by Peach Avenue to the north, Decatur Street to the east, and multi-family townhomes and apartment buildings to the south.

- The subject property has been developed since at least 1897 with single and multi-family residential buildings. The subject property was part of the former Dixie Homes public housing development from 1937 until 2006 when the area was cleared for redevelopment as the Legends Park Subdivision.

- The BVA Site 79-846 includes the subject property. The BVA executed on September 29, 2009, outlines environmental conditions identified hydraulically upgradient (south) of the site that include 1) chlorinated solvent and petroleum impacts to groundwater; and 2) the presence of hydrocarbons and dry-cleaning solvents in soil gas. Because the site may not have been fully characterized, a Notification of Land Use Restrictions has been imposed. As it applies to the subject property, this Land Use Restriction 1) prohibits the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems for buildings constructed at the subject property.

- Minkie Jos, a former clothes cleaner and presser, has been identified at the subject property in environmental database records and historical city directories for the year 1921 (EnSafe 2020). No additional information was provided in the database records; however, it is important to note that historical documents identify a storefront at this address, which could potentially have been operated as a dry cleaner.

- On the south-adjoining property, one address (311 Decatur Street) was identified in the 1932 city directory as Gordon Cleaners and Dyers, a former clothes cleaner and presser. No additional information is provided in historical records reviewed; however, it is important to note that historical fire insurance maps identify a storefront at this address in 1907, and Gordon Cleaners may have operated as a dry cleaner.

- The west and south-adjoining properties are located within BVA Site ID 79-846. Based on TDEC records reviewed, PAH-impacted soils were used as geotechnical fill material on the west-adjacent property. In accordance with BVA Site ID 79-846, to prevent exposure to the PAH contaminants, the soil is contained beneath an orange "witness barrier" (safety fencing) and clean fill material.

- The surrounding area has been developed with residential, commercial, and light industrial properties since at least 1897. Various commercial/light industrial businesses such as gasoline stations, automobile repair and service shops, and dry cleaners have operated on surrounding area properties that are expected to have used and possibly stored regulated materials including solvents and other hazardous substances/petroleum products. A total of 17 sites, beyond the subject property and adjoining properties, were identified on environmental databases as having documented releases of hazardous substances and/or petroleum products.

6.2 Environmental Professional Opinion

This assessment has revealed evidence of the following *recognized environmental condition and controlled recognized environmental condition* in connection with the subject property:

- BVA Site ID 79-846 includes the subject property and adjoining properties west and south of the subject property. The BVA outlines environmental conditions identified upgradient of these properties that include 1) chlorinated solvent and petroleum impacts to groundwater, and 2) the presence of hydrocarbons and dry-cleaning solvents in soil gas. Additionally, numerous sites in the subject property surrounding area have reported releases of hazardous substances and/or petroleum products. Given the BVA and number of sites in the subject property area with reported releases of hazardous substances and/or petroleum products, the potential exists for regional groundwater contamination which constitutes a *recognized environmental condition* for the subject property.

- The subject property is subject to Land Use Restrictions that 1) prohibit the installation of water wells and use of groundwater at the subject property, 2) in the event of the discovery

of contaminants in soil at the subject property, the soil must be managed in accordance with a TDEC-approved soil management plan, and 3) may require the installation of soil vapor mitigation systems on buildings constructed at the subject property. Therefore, the land use restrictions are considered a *controlled recognized environmental condition*.

- ASTM E1527-13 non-scope issues related to compliance with National Environmental Policy Act environmental factors were assessed under NHTF guidance. The project was found to comply with ASTM non-scope issues. Supporting documentation is included in Appendix I.

6.3 Data Gaps

Limitations and exceptions detailed in Section 5.4 are also considered data gaps that may have limited EnSafe's ability to identify *recognized environmental conditions*, as indicated.

6.4 Limitations and Exceptions

EnSafe's Phase I ESA generally conforms to ASTM 2013. EnSafe did not sample soil, soil vapor, groundwater, or surface water as part of the Phase I ESA. Assessment of these items is based upon visual observations and sources as referenced throughout the report. This report should not be construed as verifying the present property owner or operator's compliance with federal, state, and local regulations or as a recommendation to purchase, sell, or develop the subject property. The following specific limitations and exceptions apply to this Phase I ESA:

- The quality and scale of some of the historical maps and aerial photographs limited EnSafe's ability to make observations related to subject property development and/or activities. However, based on the nature of site operations, this limitation is not expected to have limited EnSafe's findings or conclusions.

6.5 Significant Assumptions

This report is a prudent, reasonable evaluation of the subject property's observed environmental condition. EnSafe assumes no responsibility for conditions or information not practically reviewable, or information not accurately disseminated by any party. The following significant assumptions were used to formulate the conclusions and opinions contained in this report:

- Groundwater flow generally follows topography.

- Environmental database information is accurate and complete.

- Conditions at the time of the site visit were representative of ordinary conditions at the subject property.

- The subject property boundaries depicted on figures and described herein are accurate.

6.6 User Reliance

The assessment was prepared under contract for the exclusive use of PennRose. Any other party's reliance on this report is at risk unless EnSafe grants authorization. In accordance with ASTM 2013, this Phase I ESA is presumed to be valid for 180 days from the date of completion. A Phase I ESA that meets or exceeds this practice and was completed more than 180 days previously may be used to the extent allowed in Sections 4.7 and 4.8 of ASTM 2013.

Appendix B
Resumes

BAVANI KATHIR
Geologist

EDUCATION

BS, Geology (Honors Cum Laude), Texas A&M University, 2020

AFFILIATIONS/ ORGANIZATIONS

Texas A&M University Geology and Geophysics Society

Geological Society of America

Houston Geological Society

Geophysical Society of Houston

REGISTRATIONS & CERTIFICATIONS

40-Hour HAZWOPER Initial Training

Bavani is a Geologist with more than five years of research and academic experience in the field, including geotechnical investigations and construction materials testing of soils; routine laboratory tests; Atterberg liquid and plastic limit tests, and unconfined compressive strength tests; and ASTM procedures on geotechnical and construction materials testing. Her relevant skillset includes ArcGIS, QGIS, LogPlot, Google Earth Pro, JMARS, MATLAB, Geologic Field Mapping, Data Collection, Seismic Data Analysis, and working with instruments such as Electron Probe Microanalyzer (EPMA), Scanning Electron Microscope (SEM), Hammer Drill, Gas Chromatography Equipment, Petrographic Microscopy, Light Microscope, Sieves, Brunton Compass, and Field Handheld GPS. Notable achievements include being selected to provide a poster presentation at Texas A&M Geology and Geophysics Research Symposium, named a Finalist for Texas A&M University Geology and Geophysics Outstanding Senior Award, and selected as a Texas A&M University College of Geosciences Silver Medallion Scholar.

RELEVANT EXPERIENCE

HECO, HECO Realty, Dyersburg, TN (2021-Present)

As Staff Geologist, Bavani Kathir provided technical support and assisted with soil, groundwater, and ambient air sampling, oversaw the installation of new groundwater monitoring wells, abandoned injection and monitoring wells, and performed site inspections and assessments.

Phase I ESA Legends Park Subdivision Block A, PennRose, Memphis, TN (2021-Present)

As Staff Geologist, Bavani Kathir was responsible for performing a Phase I Environmental Site Assessment of Legends Park Subdivision Block A under the supervision of an Environmental Professional. Duties included visual reconnaissance, conducting interviews with personnel, reviewing historical and regulatory records, evaluating state and federal environmental databases, and report preparation.

Phase II ESA Legends Park Subdivision Block A, PennRose, Memphis, TN (2021-Present)

As Staff Geologist, Bavani Kathir assisted with a Phase II Environmental Site Assessment. Duties included soil-gas sampling with summa canisters and utilizing equipment such as the Hammer Drill.

Phase II ESA Summer and Broad, Alliance Healthcare Services, Memphis, TN (2021-Present)

As Staff Geologist, Bavani Kathir assisted with soil and soil-gas sampling for a Phase II Environmental Site Assessment.

RESEARCH EXPERIENCE

Undergraduate Researcher at Texas A&M University, Department of Geology and Geophysics, College Station, TX

- As Planetary Geology and Geophysics Researcher, Bavani assisted in the creation of a 1D steady-state thermal model of Io's crust, one of Jupiter's moons, using advanced geophysical numerical modeling. She investigated how the accumulation of sulfur in the upper crust contributed to the total thermal balance of crustal recycling and extensively studied the volcanogenic processes on Io, specifically the geochemistry of sulfur.
- As Igneous Petrology Volcanic Researcher, Bavani examined igneous rock cores from the Trans-Mexican Volcanic Belt, helped prepare thin sections, performed geochemical analyses and data processing with the EPMA, and petrographically characterized the rock to determine the composition.
- As Asteroid Vesta Researcher, Bavani provided compositional analysis of meteorite samples from the Asteroid Vesta through petrographic characterization.
- As Microfossil Carbonates Researcher, Bavani picked foraminifera samples from the Maldives with a light microscope and mounted them onto the SEM to determine their crystallography.

STEFFEN MATTHEWS

Environmental Scientist/Geologist

EDUCATION

BA, Earth Science, University of Memphis, 2020

AFFILIATIONS/ ORGANIZATIONS

American Society for Photogrammetry and Remote Sensing

Society of Exploration Geologists

Steffen is an experienced geologist specializing in seismic processing, ground penetrating radar, electrical resistivity tomography, QGIS and Esri GIS products, geologic mapping, field data collection, Python Coding, lidar processing, and data analysis. He is adept at management and technical writing and is skilled at public outreach. Specific services include water sampling, soil and soil gas sampling, and Phase I-type assessments. Steffen has been published in several university publications for his research in the Golddust Quadrangle and the Nodena Quadrangle.

RELEVANT EXPERIENCE

***Research, Auburn University, Auburn, AL (2020-2021)**

As a Teaching Assistant, Steffen examined the effectiveness of ground penetrating radar for identifying earthquake-related features. He developed GIS analyses for classifying surface features related to materials found in the subsurface, and wrote technical papers and prepared presentations on his findings.

***Groundwater Study, Center for Applied Earth Science and Engineering Research, Memphis, TN (2020)**

As a Senior Water Technician, Steffen led field work to conduct reconnaissance on hydrogeologic areas of interest. He also supervised and performed piezometric analyses of groundwater with relation to the Memphis aquifer, and produced maps in ArcGIS for use by the local water utility company.

Complaint

Complaint No: 46636
Assigned Date: FEB-23-2018
Date Received: FEB-02-2018
How Received: Phone
Concerning: Used Oil
Concering (Other):

Investigation

Status: NOV
Status Detail: Area where engines are pulled had some staining on the ground as well as a few puddles of antifreeze from incidental spillage. Once engines and transmissions are removed they are drained into an oil tank inside the building and used to power a used oil heater. Owner agreed to move the rack onto a concrete surface, remove the stained soil and institute procedures to minimize and contain spillage. An NOV will be sent.
NOV mailed 3/7/18

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Oct 20, 2021

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Oct 20, 2021

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Oct 20, 2021

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Oct 20, 2021

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Oct 20, 2021

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Aug 30, 2021

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Aug 30, 2021

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Aug 30, 2021

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Aug 30, 2021

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Aug 30, 2021

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Aug 30, 2021

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 23, 2021

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 23, 2021

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jul 26, 2021

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 20, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 2, 2020

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Oct 20, 2021

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Jun 28, 2021

State

Promulgated Sites: SHWS

The Promulgated List made available by Tennessee's Department of Environment and Conservation (TDEC) is a List of Inactive Hazardous Substance Sites. 'Inactive hazardous substance sites that constitute an imminent, substantial danger' is an inactive hazardous substance site where there is a threat of danger to the public health, safety, or environment which is both real and presently existing. This database is state equivalent NPL.

Government Publication Date: Oct 29, 2021

Delisted State Hazardous Waste Sites: DEL SHWS

This database contains a list of sites which have removed from The Promulgated Sites Listing maintained by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Oct 29, 2021

Solid Waste Disposal Facilities and Landfills: SWF/LF

A list of permitted solid waste and landfill facilities made available by Tennessee's Department of Environment Conservation (TDEC).

Government Publication Date: Sep 13, 2021

Environmental Activities on USTs: LUST

The Tennessee Department of Environment and Conservation (TDEC) has made available a list of facilities where any type of environment-related activity has occurred due to a tank closure, or a suspected or confirmed release. The information in this list includes the facility's name and address when the environmental activities began, and the as well as the current status of the activities taking place.

Government Publication Date: Aug 9, 2021

Tennessee Petroleum Underground Storage Tank Fund: LUST TRUST

A list of facilities which have applied for reimbursement from the Tennessee Petroleum Underground Storage Tank Fund, made available by Tennessee Department of Environment and Conservation (TDEC).

Government Publication Date: Aug 9, 2021

Delisted Leaking Storage Tanks: DELISTED LST

This database contains a list of leaking storage tank sites and their Funds for reimbursement of costs related to assessment and cleanup that were removed from the Department of Environment and Conservation (TDEC) database.

Government Publication Date: Aug 9, 2021

Hazardous Waste Remedial Action Fund: HWRA

List of sites under the Hazardous Waste Remedial Action Fund (HWARF) program, maintained by Tennessee Department of Environement and Conservation (TDEC). The Division of Remediation uses the Fund to investigate and cleanup environmental problems caused by the release of hazardous substances into the environment.

Government Publication Date: Oct 29, 2021

Delisted Hazardous Waste Remedial Action Fund: DHWR

List of sites which once appeared on - and have since been removed from - the list of sites participating in the Hazardous Waste Remedial Action Fund, made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Oct 29, 2021

Underground Storage Tanks: UST

A list of tank compartments that have been reported to the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). Some of the compartments listed, are not regulated by state or federal regulations, because of the substance stored, the size of the compartment, its use, etc. This list is maintained by Tennessee Division of Underground Storage Tanks in DEC.

Government Publication Date: Aug 9, 2021

Delisted Storage Tanks: DEL STORAGE TNK

List of tank compartments is maintained by the Division of Underground Storage Tanks in the Department of Environment and Conservation (DEC). The department would remove a record if the compartment is not regulated. This list contains the non-regulated tank compartments that been removed from the department's tank database.

Government Publication Date: Aug 9, 2021

Sites Remediated with Institutional Controls: INST

List of remediated sites that have institutional controls in place. This list has been made available by Tennessee's Department of Environment and Conservation (TDEC).

Government Publication Date: Oct 29, 2021

Sites Remediated with Engineering Controls: ENG

This list made available by Tennessee's Department of Environment and Conservation (TDEC) is comprised of remediated sites that have engineering controls.

Government Publication Date: Oct 29, 2021

Voluntary Cleanup, Oversight and Assistance Program: VCP

The Voluntary Cleanup Oversight and Assistance Program (VOAP) overlooked by Tennessee's Department of Environment and Conservation (TDEC) offers people the opportunity to work proactively with state government to address necessary cleanup of a property to return it to productive use. In return for their efforts, participants can receive a No Further Action letter and a release of liability for areas where investigation and cleanup is conducted. This list is maintained by the Division of Remediation in Department of Environment and Conservation.

Government Publication Date: Oct 29, 2021

State Remediation Program List: SRP

The State Remediation Program (SRP) was established in 1994 within the Division of Solid Waste Management of the Department of Environmental Conservation (DEC) for the purpose of providing owners, prospective purchasers and other interested parties the means to voluntarily investigate, clean up or monitor contaminated sites not regulated under RCRA, CERCLA or the Tennessee Division of Underground Tanks (UST). This list maintained by Department of Environment and Conservation, Division of Solid waste Management - Site Remediation Program.

Government Publication Date: Oct 29, 2021

Division of Remediation Sites: REMEDIATION

List of remediation sites that are or have been under any of the program in Division of Remediation, Tennessee's Department of Environment and Conservation, including VOAP, DCERP, SRP, etc.

Government Publication Date: Oct 29, 2021

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no LUST records in Tennessee at this time.

Government Publication Date: Apr 12, 2019

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 4, which includes Tennessee. There are no UST records in Tennessee at this time.

Government Publication Date: Oct 14, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Sep 17, 2021

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/

Government Publication Date: Dec 12, 2019

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.
Government Publication Date: Oct 20, 2021

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.
Government Publication Date: Jun 14, 2021

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: May 5, 2021

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).
Government Publication Date: May 5, 2021

Formerly Used Defense Sites: FUDS
Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.
Government Publication Date: May 26, 2021

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2006

Uranium Mill Tailings Radiation Control Act Sites: URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Oct 25, 2021

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Apr 13, 2021

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Drycleaner Environmental Response Program Remediation Sites: PRIORITY CLEAN

Tennessee's Department of Environment and Conservation (TDEC) Division of Remediation operates a program called the Drycleaner Environmental Response Program (DCERP). This program keeps a list of DCERP remediation sites.

Government Publication Date: Oct 29, 2021

Delisted Drycleaner Environmental Response Program Remediation Sites: DELISTED DCER

The list of Drycleaner Environmental Response Program, maintained by the Tennessee's Department of Environment and Conservation Division of Remediation, would remove a record if the program finished the remediation. This list contains all such records that has finished remediation.

Government Publication Date: Oct 29, 2021

Registered Drycleaner Facilities List: DRYCLEANERS

The Drycleaner Environmental Response Program (DCERP) of the Department of Environment and Conservation maintains a list of registered drycleaner facilities.

Government Publication Date: Sep 7, 2021

Delisted Drycleaners List: DELISTED DRYCLEANERS

List of sites removed from the drycleaners database made available by the Department of Environmental and Conservation.

Government Publication Date: Sep 7, 2021

Registry of Contaminated Properties: CDL

The Department of Environment and Conservation (DEC) maintains a registry of all properties reported by a law enforcement agency that have been under order of quarantine for at least sixty (60) days. These properties have been quarantined due to the criminal activities associated with Clandestine Methamphetamine Laboratories (CML). This list is maintained by The Department of Environment and Conservation (TDEC).

Government Publication Date: Oct 4, 2021

Spills, Emergency Response Data: SPILLS

An inventory of spill locations reported to Tennessee Emergency Management Agency. This list made available by Tennessee Emergency Management Agency (TEMA).

Government Publication Date: Jul 22, 2015

Statewide Petroleum Incident Logging Section (SPILS) List: SPILS

Tenneessee's Statewide Petroleum Incident Logging Section (SPILS) is a new program within the Tennessee Department of Environment and Conservation (TDEC)'s Division of Solid Waste Management (DSWM). The SPILS program log incidents along Tennessee's roadways where a reportable quantity of petroleum products is released to the environment, ensuring that appropriate cleanup standards are applied, remediation activities are completed, and final reports detailing the response are received and reviewed.

Government Publication Date: Sep 14, 2021

Solid Waste Management (SWM) Complaints: SWM COMPLAINT

List of Solid Waste Management (SWM) complaints in the Tennessee Department of Environment & Conservation (TDEC) Dataviewer.

Government Publication Date: Jan 25, 2021

Hazardous Waste Management Facilities: HWM

List of Hazardous Waste Management Facilities made available by Tennessee's Department of Environment and Conservation. Includes Active, Inactive, Closed, Open, Operating, and Not Operating facilities. This is not a complete list of hazardous waste management facilities permits in the state of Tennessee.

Government Publication Date: Sep 14, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
Legends Park - Block A
Legends Park - Block A Memphis, TN

Thank you for contac ng ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse lis ng City Directory search to determine prior occupants of the subject site and adjacent proper es. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Lis ng Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either u lized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as mul ple digi zed directories. These do not claim to be a complete collec on of all reverse lis ng city directories produced.

ERIS has made every effort to provide accurate and complete informa on but shall not be held liable for missing, incomplete or inaccurate informa on. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are addi onal addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

700-1200 of Peach Avenue
100-500 of Ayers
100-500 of Decatur

PHYSICAL SETTING REPORT

Property Information

Order Number:	21112200240p
Date Completed:	November 22, 2021
Project Number:	0888830988
Project Property:	Legends Park - Block A Legends Park - Block A Memphis TN
Coordinates:	
Latitude:	35.14930744
Longitude:	-90.02724027
UTM Northing:	3893647.73439 Meters
UTM Easting:	770816.865342 Meters
UTM Zone:	UTM Zone 15S
Elevation:	259.99 ft
Slope Direction:	S

Soil Information....9
Wells and Additional Sources....12
Summary....13
Detail Report....16
Radon Information....84
Appendix....85
Liability Notice....87

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

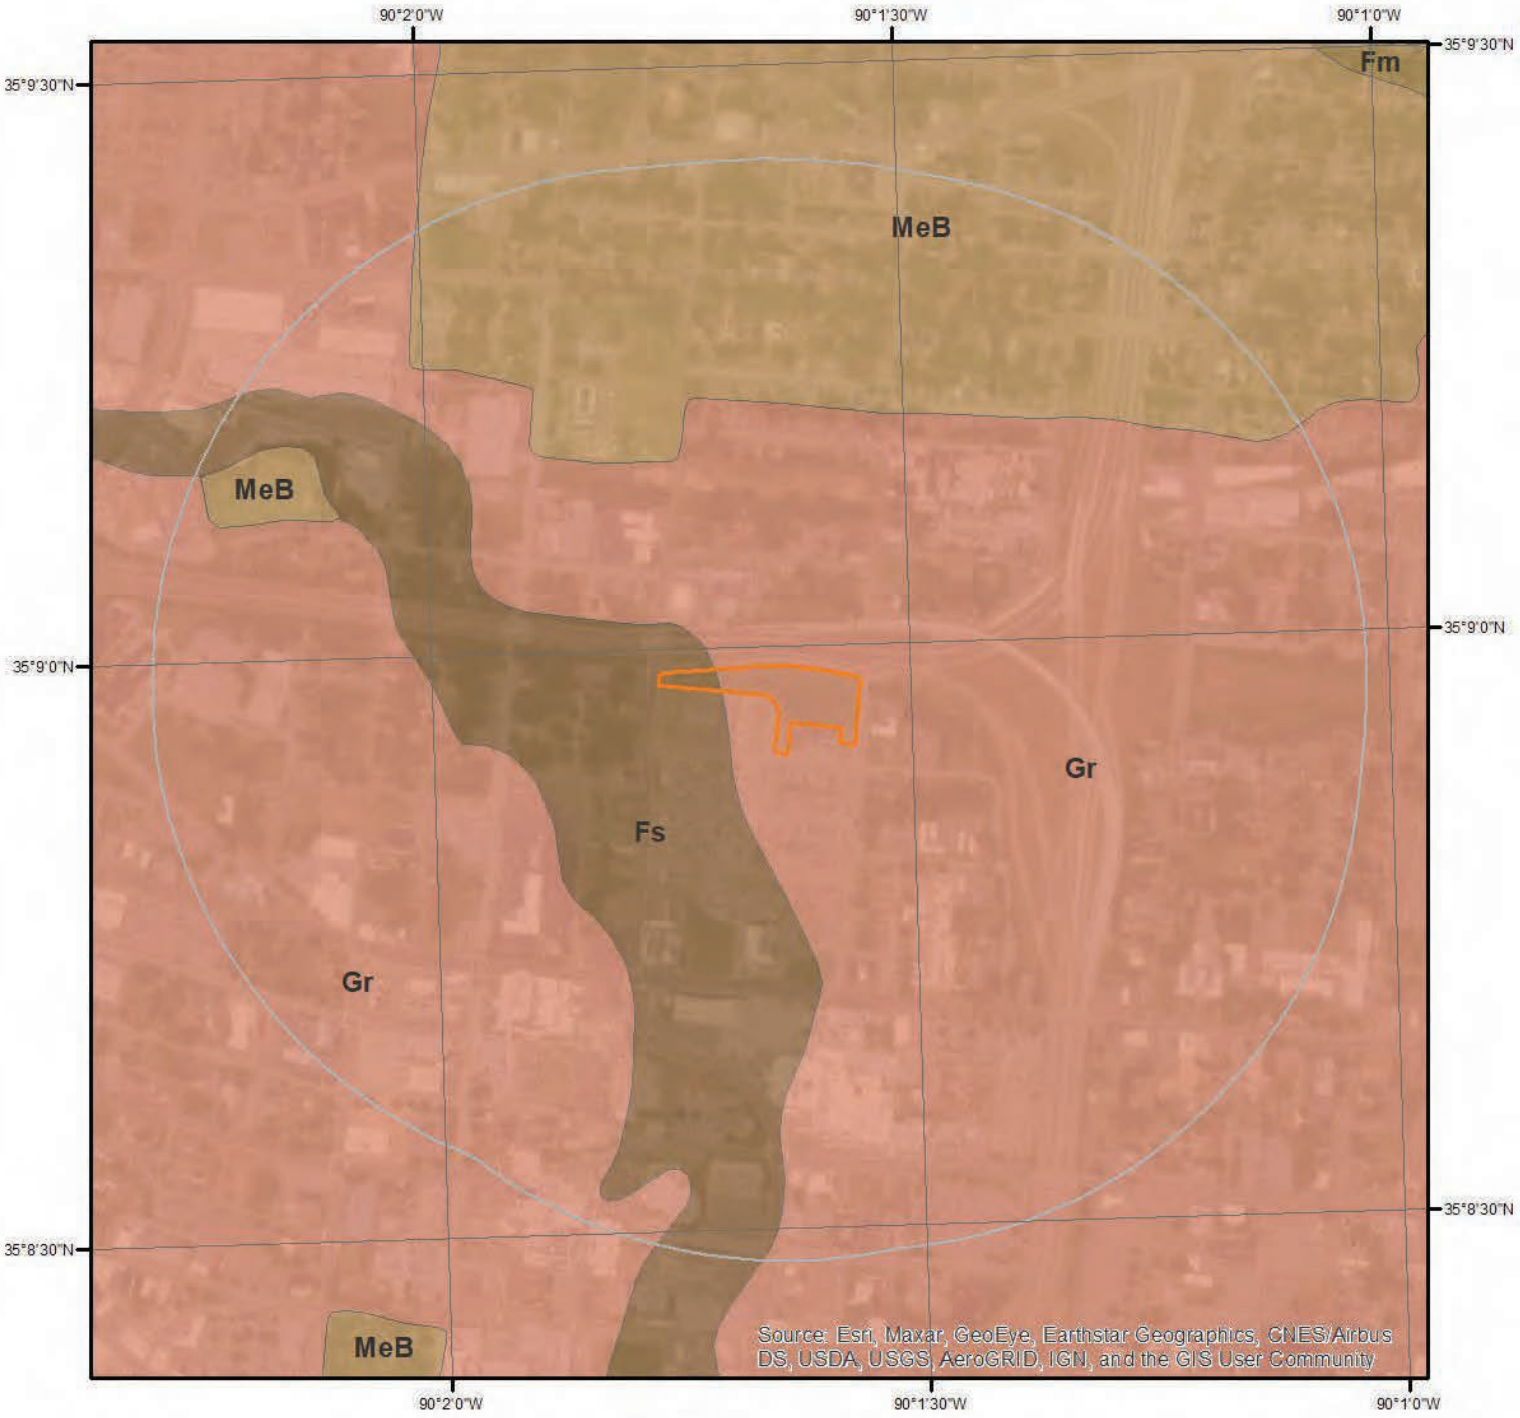
Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Ql

Unit Name:	Loess
Unit Age:	Quaternary
Primary Rock Type:	silt
Secondary Rock Type:	
Unit Description:	Loess - Clayey and sandy silt, gray to brown, massive. Maximum thickness about 100 feet along bluffs of Mississippi River; thins eastward. (Minimum mapped thickness 4 feet.)

Soil Information



SSURGO Soils

0 0.2 0.4 Miles

N

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit Fs (4.2%)

Map Unit Name:	Filled land, silty (udorthent, silty)
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	null
Major components are printed below	
Udorthents, silty(100%)	
horizon H1(0cm to 152cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Fs - Filled land, silty (udorthent, silty)

Component: Udorthents, silty (100%)
Generated brief soil descriptions are created for major soil components. The Udorthents, silty is a miscellaneous area.

Map Unit Gr (36.61%)

Map Unit Name:	Graded land, silty materials(udorthent, silty)
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	null
Major components are printed below	
Udorthents, silty(100%)	
horizon H1(0cm to 152cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Gr - Graded land, silty materials(udorthent, silty)

Component: Udorthents, silty (100%)
Generated brief soil descriptions are created for major soil components. The Udorthents, silty is a miscellaneous area.

Map Unit MeB (59.19%)

Map Unit Name:	Memphis silt loam, 2 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	

Soil Information

Memphis(100%)

horizon Ap(0cm to 18cm)	Silt loam
horizon Bt1(18cm to 46cm)	Silty clay loam
horizon Bt2(46cm to 188cm)	Silt loam
horizon C(188cm to 274cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: MeB - Memphis silt loam, 2 to 5 percent slopes, northern phase

Component: Memphis (100%)
The Memphis component makes up 100 percent of the map unit. Slopes are 2 to 5 percent. This component is on loess hills on plains. The parent material consists of fine-silty noncalcareous loess. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the F134XY002AL Northern Deep Loess Summit - Provisional ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *SHELBY* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *SHELBY* County

No Measures/Homes:	144
Geometric Mean:	0.8
Arithmetic Mean:	1
Median:	0.8
Standard Deviation:	0.8
Maximum:	4.4
% >4 pCi/L:	1
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of Tennessee conducted during 1986-87. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

County Water Wells — **WATER WELLS**

A list of county water well locations maintained by the Division of Water Resources at the Department of

Environment and Conservation.

Oil and Gas Wells **OGW**

Oil and Gas Well Data made available by Tennessee Department of Environment and Conservation.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. RE: Completion letter for Legends Park North/West [formerly a portion of Dixie Homes Housing Development [TN1-5 & TN1-9]
DoR Number 79-846

Dear Messrs. Bennett, Willis, Goldstein, and Lipscomb and Ms. Willis:

This letter certifies completion of the tasks set forth in the Brownfield Agreement entered into between the Tennessee Department of Environment and Conservation, Memphis Housing Authority and McCormack Baron Salazar to address the portion of the Dixie Homes property

known as Legends Park North/West property (see Exhibit A) in Memphis, TN. The Department shall require no further action under this Agreement.

I appreciate your efforts to address environmental impacts at this property. For additional or site specific information, please contact the Division of Remediation Memphis Environmental Field Office Manager, Jordan English at 901-371-3039. If I can be of further assistance, please contact me at 615-532-0911.

Sincerely,

Robert A. Binford
Director

Legends Park North/ west, BVA #79-846 ("Site")
916 Poplar Street
Memphis, Shelby County, Tennessee 38105

Dear Mr. Shivas and Ms. Campany:

Pursuant to T.C.A. Section 68-212-225, this letter is to advise you that the Department-approved Notice of Land Use Restriction ("NLUR") for the above-referenced Site was recorded with the Shelby County Recorder of Deeds on January 13, 2012. A copy of the recorded NLUR is enclosed for your records.

In addition, pursuant to T.C.A. Section 68-212-225(a)(2), a copy of the recorded NLUR has been mailed to local governments having jurisdiction over any part of the subject property. Copies of the letters sent to local governments are also enclosed for your records. We will provide you with copies of the return receipts when we receive them back from the U.S. postal service.

Please feel free to contact me should you have any questions.

NOTICE OF LAND USE RESTRICTIONS

Notice is hereby given that pursuant to T.C.A. § 68-212-225 of the *Hazardous Waste Management Act of 1983*, the Commissioner of the Tennessee Department of Environment and Conservation ("TDEC") has determined that land use restrictions are an appropriate remedial action at the below-described property. Pursuant to T.C.A. § 68-212-225(d), the register of deed shall record this Notice and index it in the grantor index under the names of the owners of the land.

Witnesseth:

WHEREAS, the Memphis Housing Authority, a public body organized and existing under active laws of the State of Tennessee ("Grantor") is the owner of an approximate 17.50-acre parcel of real property known as "Legends Park-North/West" (once known as Dixie Homes) located in Memphis, Tennessee 38126, as recorded in Parent Deed Book 3094, Page 267 (Tax Parcel 05101700001) and also part of the Memphis Housing Authority Property as recorded in Instrument No. H2-2047 (Tax Parcel 05101700002), in the Register of Deeds Office, Shelby County and legally described in Exhibit A hereto (such property hereinafter referred to as the "Site,"); and

WHEREAS, Grantor, along with McCormack Baron Salazar, Inc., a Missouri corporation, Community Capital LLC, a Tennessee limited liability company, Legends Park West, L.P., a Tennessee limited partnership and Legends Park North, L.P. (formerly known as Legends Park L.P.), a Tennessee limited partnership (collectively, "Voluntary Party") entered into a Brownfield Voluntary Agreement #79-846 dated September 9, 2010 ("Brownfield Voluntary Agreement") with TDEC pursuant to Tennessee Code Annotated §68-212-224 for the purpose of addressing the real or perceived threat of the presence on the Site of hazardous substances, solid waste or other pollutants; and

WHEREAS, in accordance with work plans approved by TDEC and the terms of the Brownfield Voluntary Agreement #79-846, the Site has been investigated and remediated to levels acceptable for residential use; and

WHEREAS, pursuant to the Brownfield Voluntary Agreement the Grantor has agreed to impose certain land use restrictions on the Site as set forth hereinafter and has agreed to preserve and maintain these restrictions.

NOW, THEREFORE, in consideration of the foregoing, the Grantor hereby declares that the Site should be held, sold, and conveyed subject to the following land use

RECEIVED
JAN 30 2012
MEMPHIS FIELD OFFICE

restrictions. Said land use restrictions shall run with the land and shall be binding on all parties having any right, title or interest in the Site or any part thereof, their heirs, successors, successors-in-title, and assigns, and shall inure to the benefit of each owner thereof and to TDEC and the respective successors and assigns of such parties:

Description of Affected Property (the Site):

The Site is approximately 17.50 acres and is located in Memphis, Tennessee. A legal description of the Site is attached hereto as **Exhibit A** and a map showing the Site is attached hereto as **Exhibit B**.

Land Use Restrictions:

Grantor imposes the following restrictions:

1) The installation of groundwater wells and use of groundwater at, on, under or from the Site is prohibited, except for monitoring or remediation. Prior to any installation of water wells or use of groundwater (other than for monitoring or remediation), the Grantor, its successors, and/or assigns must obtain approval in writing from TDEC.

2) Structures located on Block "D," Block "F" and "Block H" at the Site, in the areas shown on **Exhibit C** ("VMS Areas"), have been equipped with a vapor mitigation system in accordance with the Department-approved work plan entitled "General Specifications for Sub Slab Vapor Barrier and Venting System," dated October 1, 2008 ("Vapor Mitigation System Workplan") as a precautionary measure to prevent the potential for vapors to accumulate in such structures. No one shall disturb or remove any vapor mitigation system at any such structure at the Site, unless first approved in writing by TDEC and pursuant to an approved work plan. Any future replacement structures and any new structures within the VMS Areas shall be equipped with a vapor mitigation system in accordance with the Vapor Mitigation System Workplan or as otherwise approved in writing by the Department.

3) As shown on **Exhibit D**, all known PAH- contaminated soils at the Site have been covered with at least two (2) feet of clean soil fill and an orange plastic witness barrier has been placed below the clean soil to clearly identify the depth below which the contaminated soil is located. These soils must be managed in accordance with the Soil Operations and Maintenance Plan approved by TDEC by letter of November 8, 2011. Any PAH-contaminated soil identified during future development activities at the Site must be managed in accordance with the performance-based approach set forth in the June 19, 2009 letter from Robert A. Binford, Director, Division of Remediation to Robert Lipscomb, Executive Director of the Memphis Housing Authority (which has been incorporated into the Department-approved Soil Operations and Maintenance Plan).

4) Any soils discovered in the future to be impacted with contaminants other than PAHs must also be managed in accordance with a Department-approved soil management plan.

Any approval granted by TDEC for restricted uses shall be in writing, must contain a reference to this instrument, and shall be available for review in a file maintained on the Site or at the offices of the Memphis Housing Authority. Any person or entity that petitions the Department for approval of restricted uses or seeks to cancel or make a Restriction less stringent shall be responsible for any costs incurred by the Department in the review and oversight of work associated with the restriction modification.

Any person or entity owning, leasing, occupying or otherwise using the Site subsequent to the date of this Notice of Land Use Restriction is hereby deemed to have covenanted and agreed not to sue and to have waived and released all rights that such person or entity may have against each Voluntary Party, and each of their parents, subsidiaries, affiliates, successors and assigns and their shareholders, officers, directors, employees and agents for any and all claims, damages, losses, costs and expenses in any way arising out of or in connection with the environmental condition of the Site or the environmental condition of any off-site areas ever affected by the Site, including, but not limited to, claims arising under common law and claims arising under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, or any other federal, state or local statute, regulation or ordinance designed to protect public health or the environment.

Grantor and any successor in title to the Property shall cause all grants, leases and other written transfers of interests in the Property to contain a provision expressly requiring all holders of such interests in the Property to accept such interests subject to the use restrictions, covenants, requirements and releases set forth in this Notice of Land Use Restrictions and not to violate any term or condition of this Notice of Land Use Restrictions. Nothing contained in this Paragraph shall be construed as limiting any obligation of the holder of an interest in the Site to provide any notice required by or pursuant to any federal, state or local law, regulation or ordinance.

Amendment and Termination

This Notice of Land Use Restrictions may be made less stringent or terminated by the Commissioner of TDEC if the risk has been eliminated or reduced so that less restrictive or no land use controls are protective of human health and the environment. No amendment to or termination of this Notice of Land Use Restrictions shall be effective until such amendment or instrument terminating this Notice of Land Use Restrictions is recorded in the Shelby County Register of Deeds.

Enforcement

Any owner of the Site, any unit of local government having jurisdiction over any part of the Site or any person or entity eligible for liability protection under the Brownfield Voluntary Agreement may enforce this Notice of Land Use Restrictions by

means of a civil action. The Commissioner of TDEC may enforce this Notice of Land Use Restrictions through the issuance of an Administrative Order or by means of a civil action, including one to obtain an injunction against present or threatened violations of the restrictions. Pursuant to T.C.A. § 68-212-213, any person who fails, neglects or refuses to comply with a land use restriction commits a Class B misdemeanor and is subject to the assessment of a civil penalty of up to ten thousand dollars ($10,000) per day.

Term

This Notice of Land Use Restrictions shall run with and bind the Site.

Severability

Invalidation of any of these covenants or restrictions by judgment or court order shall in no way affect any other provisions, which shall remain in full force and effect.

IN WITNESS WHEREOF, the undersigned has executed this Notice of Land Use Restrictions this 9th day of January, 2012.

Grantor: MEMPHIS HOUSING AUTHORITY

By: _____
Robert Lipscomb
Executive Director

STATE OF SHELBY
COUNTY OF TENNESSEE

Before me, a Notary Public of the state and county aforesaid, personally appeared Robert Lipscomb, with whom I am personally acquainted (or proved to me on the basis of satisfactory evidence), and who, upon oath, acknowledged himself to be Executive Director of Memphis Housing Authority, a Tennessee public body, corporate and politic under the Housing Authority Laws of the state of Tennessee, the within named bargainor, and that he as such Executive Director, executed the foregoing instrument for the purpose therein contained, by signing the name of the Memphis Housing Authority by himself as Executive Director.

WITNESS MY HAND AND SEAL, at office in Memphis, Tennessee, this 9 day of January, 2012.

1.0 Executive Summary

Legends Park North/West in Memphis, Tennessee is part of a large scale redevelopment and improvement program led by the Memphis Housing Authority (MHA). This Soil Operations and Maintenance (O&M) plan is focused on a portion of Legends Park called "Legends Park North/West" as shown in Figure 1 below, and provides practical guidance for management of soil contamination buried at-depth.

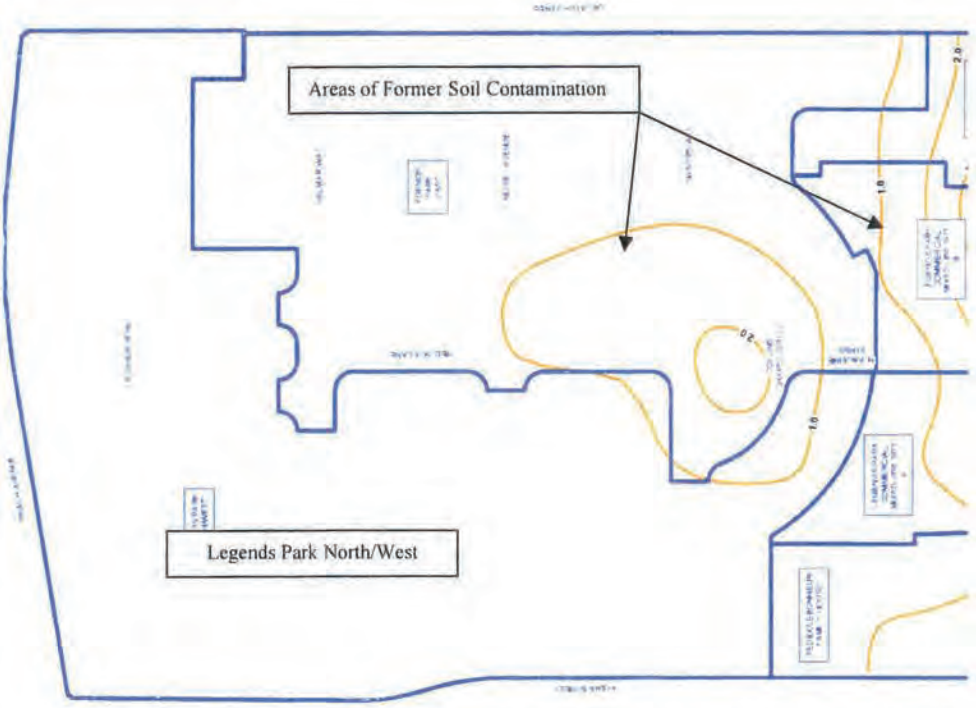

Figure 1: A Portion of Legends Park, and the Location of Legends Park North/West

Legends Park is built on land formerly occupied by the Dixie Homes public housing development and is currently owned by MHA. Historically used for cotton farming, and subsequently for a school, harness shop, and residences, surface soil at Legends Park was found during pre-construction investigation activities to be contaminated with polyaromatic hydrocarbons, lead, and asbestos. As shown in Figure 1 above, polyaromatic hydrocarbon and lead contaminants were concentrated to the south towards Poplar Avenue. Asbestos contamination (not shown in Figure 1) was found distributed in localized areas across Legends

Park. All soils with detectable levels of asbestos were removed and shipped off-site for disposal. Polyaromatic hydrocarbon and lead contaminated surface soils were removed, temporarily stockpiled, and subsequently used as geotechnically suitable fill as needed across Legends Park, to include beneath Legends Park North/West. Beneath Legends Park North/West, the contaminated soil is located at least two feet below final grade, and most areas, is located more than four feet below the current grade. The contaminated soil is separated from overlying clean soil by a brightly-colored orange witness barrier so that the exact location of contaminated soil is readily identifiable.

MHA, in collaboration with its development partner McCormack Baron Salazar, Inc. (MBS) and with the approval of the Tennessee Department of Environment and Conservation (TDEC), has constructed Legends Park North/West to protect public health and the environment from this impacted soil.

Two entities operate properties at Legends Park North/West: senior housing on the northwestern portion of the property, and multifamily mixed income to the west and south. In addition, portions of Legends Park North/West remain undeveloped as of the date of this O&M. This O&M plan has been designed to inform both senior housing and multifamily property management, as well as future real estate developers and construction companies, of the history of Legends Park North/West and the controls and procedures to implement to prevent exposure to the buried environmentally-impacted soil.

With the information, controls, and procedures presented in this O&M, property management and future developers are equipped to maintain a safe environment for residents and workers.

2.0 Scope and Application

Soil disturbance below two feet below the ground surface (bgs) in the designated areas of Figures 2 through 5 has the potential to intersect soil impacted by polyaromatic hydrocarbons at levels exceeding the Tennessee Department of Environment and Conservation standard of 1 mg/kg benzo(a)pyrene equivalent toxicity (BEQ) standard. Impacted soils are located at least two feet bgs and nearly always at least four feet bgs at Legends Park North/West. This O&M

Plate 1: Witness Barrier Placement

Plate 2: Witness Barrier as Seen in a New Trench

Surface soil across all of Legends Park North/West has been tested to ensure that the soil meets standards determined to be safe for residents and visitors. In addition, new subsurface utilities have all been placed in clean soil.

Contaminated soils are located at least two feet bgs. However, to provide an adequate margin of safety, the administrative controls specified in this Soil O&M are required for any soil disturbance below two feet bgs within the designated areas.

When intrusive activities occur below two feet bgs in the designated areas, to prevent contact by workers, residents, and visitors, impacted and potentially-impacted soil must be managed separately from clean soil. This Soil O&M Plan provides guidance for property management if impacted or potentially-impacted soil below two feet bgs might be disturbed. The requirements of this Soil O&M must be followed to prevent human exposure to the impacted soil.

3.0 O&M Program Overview

As required by TDEC, this Soil O&M has been prepared to protect workers, residents, and visitors at Legends Park North/West. The location of the impacted soil at Legends Park North/West is shown in Figure 2. Construction details, showing more precise depths to the witness barrier, are presented in series of Figures 3 through 5, attached as Appendix A to this Soil O&M.

3.1 History of the Property

Legends Park North/West was initially developed for agricultural and residential use. In the 1890s, cotton was farmed on the north and an open bayou crossed the site on the southwest. The northeastern portion of the property supported apparent single-family homes in the beginning of the 20th Century, and a school complex to the north of the property extended into what is now Legends Park North/West; the school complex and much of the single family homesteads were apparently razed for the construction of Interstate 40, which abuts the property to the north. In

the 1930s, the property and the surrounding area were redeveloped into a public housing complex and surface water drainage in the bayou was directed through a subsurface culvert. The housing complex was abandoned in 2006 and demolished in 2007 in preparation for redevelopment for mixed use and mixed-income housing.

3.2 Previous Environmental Investigations/Findings

Environmental investigations of Legends Park North/West soil identified contamination by asbestos and polyaromatic hydrocarbons.

Gasses present in the Site's underlying soil were tested prior to development, but exceedances over ambient air (breathing) standards were not observed. However, exceedances of breathing air guidelines were observed on properties to the immediate south of Legends North/West. In addition, groundwaters immediately south of Legends North/West were contaminated by chlorinated solvents. The chlorinated solvents likely originate from properties south of Poplar Avenue, possibly from a clothing dry cleaner.

3.3 Previous Remedial Activities/Results/Controls Implemented

Soil contaminants were managed under the supervision of TDEC, Department of Remediation (DoR). The asbestos-contaminated soil was shipped off-site for proper management. Polyaromatic hydrocarbon contaminated soil was removed, temporarily stockpiled on the south and southeastern areas of Legends Park North/West, and was subsequently used as geotechnically suitable backfill in areas near and adjacent to the former bayou. The soils were subsequently covered with a witness barrier and clean soil cap to prevent worker and resident contact in the future.

Given the presence of aromatic hydrocarbons in soil-gas above ambient (breathing zone) standards, and contaminated groundwater on properties immediately south of Legends Park North/West, pre-emptive vented soil-gas barriers were installed beneath buildings south of

Delmar Avenue. Buildings to the north of Delmar Avenue were not required by DoR to have soil-gas barriers; soil-gas and groundwater contamination is located more than 500 feet away from Delmar Avenue.

TDEC/DoR requires the following engineering and administrative controls on Legends Park North/West:

- A ban on installation of groundwater wells and use of groundwater at the Site, except for environmental monitoring.
- A requirement to not disturb or remove the vapor mitigation systems where installed beneath buildings unless first approved by TDEC.
- In areas requiring soil-gas vapor barriers, any new or replacement structures must be equipped with an equivalent or better vapor mitigation system.
- Preparation of a Soil O&M plan that will alert on-site management to procedures to be followed if deep soil in the designated areas on the southwest portion of the site is disturbed.
- Any soils discovered to be contaminated with contaminants other than PAHs must be managed in accordance with a Department-approved soil management plan.

To provide an adequate margin of safety, this O&M provides requirements if soil disturbance activities extend deeper than two feet bgs in designated areas shown Figures 2 through 5.

3.4 Current Environmental Status

The environmental investigation and remediation at Legends Park North/West was conducted with the oversight of TDEC pursuant to a Brownfields Voluntary Agreement. TDEC/DOR issued a "No Further Action" determination for Legends Park North/West on February 17, 2012, which requires that the controls in this Soil O&M be implemented at the Site. A copy of the "No Further Action" determination is presented in Attachment 1 to this Soil O&M.

4.0 Legends Park North/West Information/Program Personnel

4.1 Legends Park North/West Address

Legends Park North/West Management Office
198 North Pauline Street
Memphis, Tennessee 38105

4.2 Legends Park North/West Program Manager

Program Manager:
Octavia L. Johnson, Memphis Area Manager
McCormack Baron Ragan Management Services, Inc. (MBR)
Octavia.Johnson@McCormackBaron.com
(901) 337- 8489

5.0 Regulatory Requirements

Legends Park North/West is regulated under a combination of state and federal environmental regulatory requirements.

5.1 State Environmental Requirements

In the event that impacted soil is disturbed, the following Tennessee environmental regulations and rules may apply:

- Tennessee Department of Environment and Conservation, Division of Remediation, Hazardous Substance Remedial Action, Final Operations and Maintenance Plan, 1200-01-13-.12.

- Tennessee Department of Environment and Conservation, Division of Solid Waste Management, Chapter 1200-1-8, Solid Waste Processing and Disposal.
- Tennessee Department of Environment and Conservation, Division of Underground Storage Tanks, Chapter 1200-01-015, Underground Storage Tank Program.

This Soil O&M satisfies the requirements of TDEC Rule 1200-01-13-.12. to protect public health and the environment. Section 8 of this O&M presents a crosswalk identifying where the TDEC regulatory requirements are addressed in this O&M if soils in the Designated Area below two feet bgs will be disturbed. Property management must engage a qualified environmental consultant to assure compliance with the requirements of TDEC Rules 1200-1-8 and 1200-01-015.

5.2 Occupational Safety and Health Administration (OSHA)

Both the federal government and the state of Tennessee have issued safety standards that apply if impacted soil is managed.

5.2.1 Tennessee OSHA

Activities that disturb impacted or potentially impacted soil must be conducted in compliance with Tennessee OSHA requirements, including but not limited to:

- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-01, Occupational Safety and Health Standards for General Industry.
- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-03, Occupational Safety and Health Record-keeping and Reporting.
- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-04, Occupational Safety and Health Inspections, Citations, and Proposed Penalties.

- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-05, Safety and Health Provisions for the Public Sector.
- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-08, Discrimination Against Employees Exercising Rights Under the Occupational Safety and Health Act of 1972.
- Tennessee Department of Labor and Workforce Development, Occupational Safety and Health, 0800-01-09, Hazardous Chemical Right to Know.

5.2.2 Federal OSHA

Activities that disturb impacted or potentially-impacted soil must be conducted in compliance with federal OSHA requirements, including but not limited to:

- 29 CFR 1910 – OSHA General Industry Standard.
- 1910.1200, Hazard Communication – Notification of Hazards to Employees.
- 1910 Subpart I, Personal Protective Equipment.
- 1910.134, Respiratory Protection.
- 1910.1000, Air Contaminants – PELs.

In the event that impacted or potentially-impacted soil has been or will be disturbed, the Program Manager is responsible for obtaining support from a qualified environmental consultant as described in Section 5.3.3 of this O&M to assure compliance with OSHA requirements.

5.3 U.S. Environmental Protection Agency (USEPA)

Management of impacted soil and its shipment for off-site disposal must be conducted in compliance with USEPA requirements including but not limited to:

- 40 CFR 261.2, Solid Waste.

The Program Manager must confirm that:

- Any testing requirements of the off-site facility have been satisfied.
- The facility has confirmed in writing that they can accept soil containing polyaromatic-hydrocarbon contamination.
- If the facility requires a signed waste profile, the profile must be signed by MHA.

6.0 Responsibilities

6.1 Memphis Housing Authority Responsibilities

The Memphis Housing Authority is responsible for providing a copy of this Soil O&M Plan to the following entities:

- Memphis Light, Gas & Water Division (MLGW)
- Memphis Street Department
- Any other city or county utility
- Land developer for future Legends Park North/West improvements
- construction company or grading contractor for future Legends Park North/West improvements
- Any other public or private entity

These entities may have the right to perform soil disturbance activities within the designated area (including but not limited to rights-of-way) without advance notice to or consent of MHA or the MBR Program Manager. MHA is responsible for notifying MLGW, the Street Department, and such other entities in writing of the need for them to comply with the Soil O&M Plan during any soil disturbance activities within the designated area. MHA is responsible for providing the Program Manager with a list of the entities that it notifies and the name, address, and telephone number of the contact person for each such entity.

6.2 Worker Responsibilities

All property maintenance workers, landscape contractors, and other contractors engaged in soil disturbance activities below the depth of two feet in the designated areas must obtain specific authorization from the Program Manager.

All property maintenance workers, landscape contractors, and other contractors engaged in soil disturbance activities at depths greater than two feet bgs in the designated areas must read and sign the Worker Notification Form in Attachment 2.

6.3 Program Manager Responsibilities

The Program Manager is responsible for:

- Conducting training for all property maintenance personnel working at depths greater than two feet bgs in the designated areas.
- Obtaining a signed confirmation from each trainee that their training was completed.
- Providing a copy of this Soil O&M to all contractors working at depths greater than two feet bgs in the designated areas.
- Obtaining a signed confirmation from all contractors working at depths greater than two feet bgs in the designated areas that they are aware of their obligations under this Soil O&M.
- Engaging a qualified environmental consultant in the event that impacted soil has been or will be disturbed.
- Engaging a qualified environmental consultant in the event that newly identified contamination has been or will be disturbed.
- Engaging a qualified oversight consultant in the event the services of an environmental consultant are required. As of the date of this Soil O&M, the qualified oversight contractor is Slosky & Company.
- Maintaining the records required by this Soil O&M.

6.3.1 Program Manager Training

The Program Manager must read this Soil O&M and its attachments and must confirm his/her review and acceptance of the Soil O&M assigned responsibilities by signing the form presented in Attachment 3 to this Soil O&M.

6.3.2 Notifications by the Program Manager

The Program Manager or his/her designate is responsible for providing the notifications listed below.

6.3.2.1 Legends Park North/West Employee Notification

Property management/maintenance employees that will disturb deep soil beneath two feet bgs in the designated areas are not permitted to do so unless approved in advance by the Program Manager. Employees will be notified of this restriction using the form presented in Attachment 2.

6.3.2.2 Contractor Notification

Except as provided in Section 6.1 of this O&M (Memphis Housing Authority Responsibilities), the Program Manager is responsible for providing this Soil O&M to contractors disturbing soil below two feet bgs in the designated areas.

If new backfill is required, the soil must be pre-qualified by testing to assure that the soil meets Tennessee residential action levels before the soil is imported onto the property.

Before any McCormack Baron Ragan, Inc. (MBR) employee or contractor disturbs the soil greater than two feet bgs in the designated areas, the Program Manager must issue a

permit for the work. The Permit Form presented in Attachment 4 must be completed by the Program Manager with the following information:

- Nature of the work.
- Location of the work.
- Engineering controls for the work.
- Storm water controls.
- Notification to workers.
- Personal Protective Equipment (PPE) for workers (such as OSHA Level D).
- Need for any air or personnel monitoring during the work.
- Acknowledgement, by signature, of the work supervisor acknowledging receipt and review of this Soil O&M and restrictions placed on the work by the permit.

6.3.2.3 State Notifications

The Program Manager must prepare and submit a report to TDEC/DoR if soil deeper than two feet bgs in the designated areas has been disturbed. Newly discovered contamination must be subsequently managed under a TDEC approved soil management plan.

If soil deeper than two feet bgs in the designated areas will be disturbed, the Program Manager must engage the support of a qualified environmental consultant to plan and oversee the work.

If impacted soil has been unintentionally disturbed, the Program Manager or contractor must immediately stop work. The Program Manager must engage the support of a qualified environmental consultant to plan an appropriate response and oversee the work.

Revisions to this Soil O&M must be approved by TDEC/DoR, except for:

- Change in Program Manager.

- Change in the qualified environmental consultant, their employer, or the Project Manager's oversight consultant.

6.3.3 Program Manager Selection of an Environmental Consultant

The Program Manager is responsible for obtaining support from a qualified environmental consultant for the purposes specified below. Except for the five-year review of this Soil O&M, the services of an environmental consultant should not be necessary unless employees work at depths beneath the witness barrier in the designated areas.

The services of an environmental consultant are required prior to soil disturbance beneath the witness barrier in the designated areas.

When the services of an environmental consultant are required, the lead consultant should have at least one of the following current certifications or registrations:

- Certified Hazardous Materials Manager (CHMM).
- Certified Industrial Hygienist (CIH).
- Registered Environmental Assessor (REA).
- Professional Geologist (PG) with at least five years of relevant environmental management experience.
- Professional Engineer (PE) registered in the state of Tennessee, with at least five years of relevant environmental management experience.
- Diplomate of the American Board of Toxicology (DABT).

6.3.4 Oversight of the Program Manager

The Program Manager's selection of environmental consultant is subject to review and approval by the oversight consultant. A of the date of this Soil O&M, the oversight consultant is Slosky & Company, Inc. at (303) 825-1911.

6.3.4.1 Pre-work Submittals for Disturbance of Contaminated Soils

The environmental consultant's Scope of Work shall be submitted to Slosky & Company for review and approval prior to engagement.

6.3.4.2 Submittals during Disturbance of Contaminated Soils

The environmental consultant should submit weekly reports of their field activities to the Program Manager and Slosky & Company.

6.3.4.3 Post-Work Submittals Documenting Proper Management of Contaminated Soil

In the event that the polyaromatic-hydrocarbon-impacted soil in the designated areas has been disturbed, either intentionally or unintentionally, the environmental consultant must prepare a post-work submittal that includes the following elements to Slosky & Company for review and approval:

- A rationale for the disturbance.
- Narrative describing on-site activities.
- Results of any air monitoring performed.
- Results of any confirmation sampling performed.
- Certification from the consultant that any off-site disposal facility that received polyaromatic hydrocarbon-impacted soil was properly permitted to accept the soil.
- Shipping papers (such as bills of lading or manifests) for any impacted soil shipped for disposal.
- Certification from the environmental consultant that any impacted soil was shipped for proper off-site disposal in compliance with federal and state regulatory requirements.

6.3.5 Program Manager Inspections

The Program Manager must perform an annual surveillance of property operations. The surveillance will consist of interviewing the field supervisor(s) of any maintenance crew or contractor that has disturbed soil since the date of the last inspection to determine if soil beneath the witness barrier in the designated areas has been disturbed.

If either the visual inspection or the interviews establish that soil beneath the witness barrier in the designated areas has been disturbed, or if impacted or potentially impacted soil has been disturbed anywhere on the property and has not been properly reported, the Program Manager must promptly engage the services of an environmental consultant to determine the best path forward.

6.4 Qualified Environmental Consultant Obligations

6.4.1 Qualified Environmental Consultant Training

The qualified environmental consultant must read this Soil O&M and must confirm his/her review and acceptance of the Soil O&M assigned responsibilities by signing the form presented in Attachment 6 to this Soil O&M.

6.4.2 Qualified Environmental Consultant Responsibilities

The qualified environmental consultant is responsible for:

- Completing the five-year reviews of the Soil O&M to determine current regulatory requirements and, as necessary, updating this Soil O&M.

- Assuring that applicable federal, state, and O&M requirements are being followed by contractor(s) in the event that the polyaromatic-hydrocarbon-impacted soil or soil impacted with hazardous substances is disturbed.
- Determining the best path forward in the event that polyaromatic-hydrocarbon-impacted soil or soil impacted with hazardous substances has been inadvertently disturbed, and complying with the June 19, 2009 correspondence from TDEC (enclosed in Attachment 1) in the event that newly identified contamination is disturbed.

6.5 Waste Management

The on-site use of working soil excavated from below two feet bgs in the designated areas is prohibited unless it can be placed back below two feet bgs within the designated areas.

Soil that cannot be placed back on-site must be characterized to meet regulatory and receiving facility requirements prior to shipment for treatment or disposal off-site.

6.6 O&M Program Updates and Modifications

Every five years (beginning in 2016) this Soil O&M will be reviewed by a qualified environmental consultant for the following:

- Changes to Tennessee environmental regulations that affect the property.
- Changes to applicable state and federal OSHA regulations.
- Need for modifications to the Soil O&M that were dictated by soil management activities that occurred in the prior five years.

If state or OSHA requirements have changed or if on-site operations have identified a need for modifications to this Soil O&M, then the consultant must revise this Soil O&M to effect the necessary changes.

Revisions can take the form of:

- A brief addendum.
- If the necessary changes are large or if an addendum is not feasible, a revised Soil O&M shall be prepared.

Any revisions to this Soil O&M beyond those allowed in Section 5.3.2.3 of this Soil O&M must be submitted in draft to the Program Manager and Slosky & Company, Inc. for review and approval prior to finalization.

6.7 Record Keeping

A signed copy of the Program Manager's acknowledgement of responsibilities must be submitted by the Program Manager to TDEC/DoR.

Copies of the records required by this O&M, as well as any records required by an environmental consultant or contractor, must be maintained by MBR. Records must be made available to TDEC/DoR upon their request. In the event that contaminated soils are managed, a copy of all project records must be submitted to TDEC/DoR within approximately two weeks after their finalization.

6.8 Summary of Program Manager Responsibilities

A summary of the Program Manager responsibilities is presented below.

- The Program Manager must review this Soil O&M and acknowledge his/her responsibilities by reviewing and signing the form in Attachment 3.

- The Program Manager must send a signed copy of attachment 3 to TDEC/DoR.

- The Program Manager must conduct and document training of all property employees and contractors engaged in soil disturbance activities beneath the witness barrier in the designated areas and obtain certification of training by having property employees and site contractors sign the form in Attachment 2.

- The Program Manager must issue permits for all soil disturbance activities beneath the witness barrier in the designated areas.

- In the event that the impacted soil anywhere on sight is accidentally disturbed, the Program Manager must stop work, secure the area, prevent further disturbance of impacted soil, and immediately obtain the support of a qualified environmental consultant. Newly discovered contamination must be managed under a TDEC approved soil management plan.

- In the event soil beneath the witness barrier in the designated areas needs to be disturbed, the Program Manager must obtain the support of a qualified environmental consultant to plan the work, oversee the work, and report on the work.

- The Program Manager must ensure that the environmental consultant's workproducts are reviewed, and approved, by an oversight consultant.

- For any shipment of impacted soils to an off-site facility, the Program Manager must confirm that the receiving facility testing requirements have been satisfied. The Program Manager must also obtain confirmation in writing that the disposal facility can accept soil impacted with polyaromatic hydrocarbons.

- All project records relating to disturbance of impacted soils must be submitted to TDEC/DoR within two weeks after their finalization.

- The Program Manager must conduct all surveillances and complete the form in Attachment 5.

- The Program Manager must retain a qualified environmental consultant every five years to review this Soil O&M and update it as necessary.

7.0 Crosswalk with TDEC rules found in the 1200-1-13-.12, "Final Operations and Maintenance Plan"

To assure compliance with TDEC post-construction management requirements, the following crosswalk has been prepared.

TABLE 1
CROSSWALK BETWEEN TDEC REQUIREMENTS AND
LEGENDS PARK NORTH/WEST SOIL O&M

Rules of TDEC, Chapter 1200-1-13-.12	Soil O&M Section Numbers
(a) Description of tasks for operation	Section 5

Directions to the site	**Start out going EAST on WOLF LAKE DR toward NEW BRUNSWICK RD** **Turn right at New Brunswick Rd** **Turn right at TN-15 W/US-64 W** **Turn left at N Germantown Pkwy** **Merge onto I-40 W via the ramp to Memphis** **Continue onto Sam Cooper Blvd** **Turn left at E Pkwy N** **Turn right toward Poplar Ave** **Destination will be on the right**		

Site Description	The former Dixie Holmes site is located at 916 Poplar Avenue, Memphis, Tennessee 38105. Dixie Homes was completed in 1938, with 81 buildings and 636 units. The site of the former Dixie Homes housing project was bounded by Poplar Avenue on the south, Ayers Street on the west, I-40 on the north and Decatur Street on the east. In recent years, settling of buildings caused structural and sewage problems. A federal HOPE VI grant in 2005 was leveraged with city, private and federal fund to redevelop the Site. On September 29, 2009, The Tennessee Department of Environment and Conversation entered into a Brownfield Voluntary Agreement with the Memphis Housing Authority. The Voluntary Party intends to develop and use the property for residential and recreational purposes. Based on the information submitted to the Department by or on behalf of the Voluntary Party, and the Department's review of submitted documents, the Parties hereto agree that the following environmental conditions have been at the Site and are addressed under the Voluntary Agreement : Groundwater Issues - Chlorinated solvents and aromatic hydrocarbons have been identified in Site groundwater, but all at concentrations less than U.S. EPA Primary Maximum Contaminant Level (MCL) Drinking Water Standards (2007) - The Voluntary Party agrees to implement and record a Department- approved deed and land use restriction prohibiting installation of shallow wells at the Site and use of on-site groundwater at the Site, except for environmental monitoring. Soil Issues - Concentrations of polyaromatic hydrocarbons (PAHs) in surface soils were below the Department's benzo (a) pyrene equivalency ("BEQ") standard of 1 mg/kg for residential land use, except for an area in the central-southwest portion of the Site. The Voluntary Party's consultant certified that all such PAH-contaminated soils were removed from the Site. - Concentrations of PAHs in subsurface soils were below the BEQ for residential use. - Lead in surface and subsurface site soils was below the EPA Region IX PRGs for residential land use. - Arsenic was detected in soils above EPA Region IX Residential PRGs, but within natural background levels. - The Voluntary Party agrees to manage any contaminated surface or subsurface soil encountered during the Site development in accordance with all applicable federal, state and local laws. If PAH-contaminated soils are identified during construction, Voluntary Party agrees to manage such soil in accordance with the performance-based set forth in the June 19, 2009 letter. If soils contaminated with contaminants other than PAHs are identified during construction, the Voluntary Party agrees to manage such soils with a Department approved soil management plan. Asbestos - Asbestos-containing materials associated with utility classes were discovered at the Site, consisting of pipe insulation within steam tunnels throughout the Site. These materials were abated and removed from the Site with the oversight of the Memphis Shelby County Health Department and a report was generated documenting the proper abatement and/or removal of the materials. - Asbestos materials within structures at the Site were removed prior to demolition of the structures with the oversight of the Memphis Shelby County Health Department and a report was generated documenting the proper abatement. - Asbestos was not identified in the surface soils. Soil Vapor Issues - The Voluntary party agrees to implement and record a Department approved land use restriction prohibiting the disturbance or removal of the vapor mitigation system installed at the Site.

Engineering - Institutional Control Description	Land Use Restriction Grantor imposes the following restrictions: 1. The installation of groundwater wells and use of groundwater at, on, under or from the Site is prohibited, except for monitoring or remediation. Prior to any installation of water wells or use of groundwater (other than for monitoring or remediation), the Grantor, its successors, and/or assigns must obtain approval in writing from TDEC. 2. Certain structures at the Site have been equipped with a vapor mitigation system to prevent the potential for vapors to accumulate in such structures. No one shall disturb, modify, damage or remove any vapor mitigation system at any structure at the Site, unless first approved in writing by TDEC and pursuant to an approved work plan. Any future replacement of such structures shall be equipped with an equivalent vapor mitigation system or, if approved in writing by TDEC, another vapor mitigation system. Any approval granted by TDEC for restricted uses shall be in writing, must contain a reference to this instrument, and shall be available for review in a file maintained on the Site. Any person or entity that petitions the Department for approval of restricted uses or seeks to cancel or make a Restriction less stringent shall be responsible for any cost incurred by the Department in the review and oversight of work associated with the restriction modification. Any person or entity owning, leasing, occupying or otherwise using the Site subsequent to the date of this Notice of Land Use Restriction is hereby deemed to have covenanted agreed not to sue and to have waived and released all rights that such person or entity may have against Voluntary Party, and each or their parents, subsidiaries, affiliates, successors and assigns and their shareholders, officers, directors, employees and agents for any and all claims, damages, losses, costs and expenses in any way arising out of or in connection with the environmental condition of the Site or the environmental condition of any off-site areas ever affected by the Site, including, but not limited to, claims arising under common law and claims arising under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, or any other federal, state or local statute, regulation or ordinance designed to protect public health or environment. Grantor and any successor in the title to the Property shall cause all grants, leases and other written transfers of interests in the Property to contain a provision expressly requiring all holders of such interests in the Property to accept such interest subject to the use restrictions, covenants, requirements and releases set forth in this Notice of Land Use Restrictions. Nothing contained in this Paragraph shall be construed as limiting any obligation of the holder of an interest in the Site to provide any notice required by or pursuant to any federal, state or local law, regulated or ordinance.

Re: No Further Action Letter for Former Dixie Homes Housing Site (FedEx Family House) Memphis, Tennessee; DoR # 79-846

Dear Mr. Lipscomb and Ms. Armour:

This letter certifies completion of the Agreed Actions to Be Taken required of Memphis Housing Authority and Methodist Healthcare - Memphis Hospitals in the Voluntary Agreement dated December 12, 2012 entered into with the Tennessee Department of Environment and Conservation to address the property located at 918 Poplar Avenue, Memphis, Tennessee. The Department shall require no further action of Memphis Housing Authority and Methodist Healthcare - Memphis Hospitals under this Agreement.

I appreciate the efforts of Memphis Housing Authority and Methodist Healthcare - Memphis Hospitals to address issues at this property. For additional or site specific information, please contact the Division of Remediation Memphis Environmental Field Office Manager, Jordan English, at 901-371-3039. If I can be of further assistance, please contact me at 615-532-0911.

Sincerely,

Robert A. Binford

NOTICE OF LAND USE RESTRICTIONS

Notice is hereby given that pursuant to T.C.A. §68-212-225 of the *Hazardous Waste Management Act of 1983*, the Commissioner of the Tennessee Department of Environment and Conservation ("TDEC") has determined that land use restrictions are an appropriate remedial action at the below-described property. Pursuant to T.C.A. §68-212-225(d), the register of deed shall record this Notice and index it in the grantor index under the names of the owners of the land.

Witnesseth:

WHEREAS, the Memphis Housing Authority, a public body organized and existing under laws of the State of Tennessee ("Grantor"), is the owner of real property commonly known as "Fedex Family House Site" located at 918 Poplar Avenue in Memphis, Tennessee, being part of what is identified as the "MHA Parcel" in a Reciprocal Easement Agreement of record with the Shelby County Register of Deeds as *Instrument No. 08115216* and in the First Amendment to the Reciprocal Easement Agreement of record with the Shelby County Register of Deeds as *Instrument No. 08148051* and legally described in Exhibit A hereto (such property hereinafter referred to as the "Site,"); and

WHERAS, Grantor, along with Methodist Healthcare-Memphis Hospitals on behalf of its Le Bonheur Children's Hospital division (formerly known as Le Bonheur Children's Medical Center) (collectively referred to hereinafter as the "Voluntary Parties") entered into a Brownfield Voluntary Agreement (Site Number 79-846) with TDEC pursuant to Tennessee Code Annotated §68-212-224 for the purpose of addressing the real or perceived threat of the presence on the Site of hazardous substances, solid waste or other pollutants; and

WHEREAS, in accordance with work plans approved by TDEC and the terms of the Brownfield Voluntary Agreement, the Site has been investigated and remediated to levels acceptable for the limited residential and commercial uses; and

WHEREAS, pursuant to the Brownfield Voluntary Agreement, the Grantor has agreed to impose certain land use restrictions on the Site as set forth hereinafter and has agreed to preserve and maintain these restrictions.

NOW, THEREFORE, in consideration of the foregoing, the Grantor hereby declares that the Site should be held, sold, and conveyed subject to the following land use restrictions. Said land use restrictions shall run with the land and shall be binding on all parties having any right, title or interest in the Site or any part thereof, their heirs, successors, successors-in-title, and

assigns, and shall inure to the benefit of each owner thereof and to TDEC and the respective successors and assigns of such parties:

Description of Affected Property (the Site):

The Site is approximately 2.2 acres and is located at the northeast intersection of Poplar Avenue and Ayers Street in Memphis, Tennessee. A legal description of the Site is attached hereto as Exhibit A and maps depicting the location of the Site are attached hereto as Exhibit B.

Location of Contamination

Perchchloroethylene (PCE), other chlorinated solvents and aromatic hydrocarbons have been detected in shallow groundwater at the Site. PCE, polyaromatic hydrocarbons, lead and arsenic have been detected in soils at the Site. A map showing the location of environmental sampling locations and tables of sampling results are attached hereto as Exhibit C except for lead, which was detected, but below the residential screening number, and arsenic, which was below the regional natural background number.

Land Use Restrictions:

Grantor imposes the following restrictions:

1) The installation of groundwater wells and use of groundwater at, on, under or from the Site is prohibited, except for monitoring or remediation. Prior to any installation of water wells or use of groundwater (other than for monitoring or remediation), the Grantor, its successors, and/or assigns must obtain approval in writing from TDEC.

2) Except in the case of an emergency, the Grantor, its successors and/or assigns in title to the Site must notify TDEC prior to the commencement of any construction activities or any other land-disturbing activities which could generate fugitive dust on the Site. The Grantor, its successors, and/or assigns must demonstrate to the satisfaction of TDEC, through any necessary sampling and analysis approved by TDEC, that any construction activities or other land-disturbing activities will not pose a danger to public health, safety, or the environment. If polyaromatic hydrocarbon-contaminated soils are identified during construction activities or any other land-disturbing activities, the Grantor or other party encountering such soils must manage such soils in accordance with the performance-based approach set forth in the June 19, 2009 letter from Robert A. Binford, Director of the Division of Remediation, to Robert Lipscomb, Executive Director of MHA (a copy of which is attached hereto as Exhibit D). If soils contaminated with contaminants other than polyaromatic hydrocarbons are identified during construction activities or any other land-disturbing activities, the party encountering such soils agrees to manage such soils with a TDEC-approved soil management plan.

3) If it becomes necessary to excavate contaminated soils or as part of a response to an emergency (e.g., repairing utility lines or responding to a fire, flood or any other casualty), the Grantor, its successors and/or assigns in title to the Site must notify TDEC of such emergency as soon as possible but no more than forty-eight four (48) hours after having learned of such

emergency; must limit the area of disturbance to the minimum reasonably necessary to adequately respond to the emergency; must implement all reasonable measures necessary to limit actual or potential risk to health, safety, public welfare or the environment; and must manage, transport and/or dispose of any excavated contaminated soil in compliance with any soil management plan approved by TDEC or, in the absence of a soil management plan, in compliance with all applicable federal, state and local laws, regulations and ordinances including, without limitation, those pertaining to environmental protection and occupational safety.

4) A vapor mitigation system has been installed at the Site. No one shall disturb, modify, damage or remove any vapor mitigation system installed at or within any structure at the Site unless first approved in writing by TDEC and pursuant to an approved work plan. Any future replacement of such structures shall be equipped with an equivalent vapor mitigation system or, if approved in writing by TDEC, another vapor mitigation system.

5) The Grantor, its successors, and/or assigns in title to the Site shall have the right to go upon the Property for inspection, monitoring, sampling and performing any other activities consistent with or required by these land use restrictions or the Brownfield Voluntary Agreement.

6) Any approval of TDEC required by this Notice of Land Use Restrictions shall be in writing, must contain a reference to this instrument, and shall be maintained by the person or entity seeking such approval. Any person or entity that petitions the Department for any approval shall be responsible for any costs incurred by the Department in the review and oversight of work associated with the effort to obtain such approval.

7) The Grantor, its successors and/or assigns in title to the Site shall cause all grants, leases and other written transfers of interests in the Site to contain a provision expressly requiring all holders of such interests in the Site to accept such interests subject to the use restrictions, covenants, requirements and releases set forth in this Notice of Land Use Restrictions and not to violate any term or condition of this Notice of Land Use Restrictions. Nothing contained in this Paragraph shall be construed as limiting any obligation of the holder of an interest in the Site to provide any notice required by or pursuant to any federal, state or local law, regulation or ordinance.

Amendment and Termination

This Notice of Land Use Restrictions may be made less stringent or terminated by the Commissioner of TDEC if the risk has been eliminated or reduced so that less restrictive or no land use controls are protective of human health and the environment. Any person or entity seeking to make this Notice of Land Use Restrictions less stringent or terminated shall be responsible for any costs incurred by TDEC in the review and oversight of work associated with the request to make this Notice of Land Use Restrictions less stringent or terminated. No amendment to or termination of this Notice of Land Use Restrictions shall be effective until such amendment or instrument terminating this Notice of Land Use Restrictions is recorded in the Office of the Shelby County Register.

Enforcement

Any owner of the Site, any person eligible for liability protection under the Brownfield Voluntary Agreement, or any unit of local government having jurisdiction over any part of the Site may enforce this Notice of Land Use Restrictions by means of a civil action. The Commissioner of TDEC may enforce this Notice of Land Use Restrictions through the issuance of an Administrative Order or by means of a civil action, including one to obtain an injunction against present or threatened violations of the restrictions. Pursuant to T.C.A. § 68-212-213, any person who fails, neglects or refuses to comply with a land use restriction commits a Class B misdemeanor and is subject to the assessment of a civil penalty of up to ten thousand dollars ($10,000) per day.

Any person or entity owning, leasing, occupying or otherwise using the Site subsequent to the date of this Notice of Land Use Restrictions is hereby deemed to have covenanted and agreed not to sue and to have waived and released all rights that such person or entity may have against the Voluntary Parties, and each of their parents, subsidiaries, affiliates, successors and assigns and their shareholders, officers, directors, employees and agents for any and all claims, damages, losses, costs and expenses in any way arising out of or in connection with the environmental condition of the Site or the environmental condition of any off-site areas ever affected by the Site, including, but not limited to, claims arising under common law and claims arising under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, or any other federal, state or local statute, regulation or ordinance designed to protect public health or the environment.

Term

This Notice of Land Use Restrictions shall run with and bind the Site.

Severability

Invalidation of any of these covenants or restrictions by judgment or court order shall in no way affect any other provisions, which shall remain in full force and effect.

IN WITNESS WHEREOF, the undersigned has executed this instrument this 15th day of July 2013.

Grantor:

MEMPHIS HOUSING AUTHORITY

By: _____

Robert Lipscomb
Executive Director

This instrument was prepared by:

Randall B. Womack

NOTICE OF LAND USE RESTRICTIONS

Notice is hereby given that pursuant to T.C.A. §68-212-225 of the *Hazardous Waste Management Act of 1983*, the Commissioner of the Tennessee Department of Environment and Conservation ("TDEC") has determined that land use restrictions are an appropriate remedial action at the below-described property. Pursuant to T.C.A. §68-212-225(d), the register of deed shall record this Notice and index it in the grantor index under the names of the owners of the land.

Witnesseth:

WHEREAS, the Memphis Housing Authority, a public body organized and existing under laws of the State of Tennessee ("Grantor"), is the owner of real property commonly known as "Fedex Family House Site" located at 918 Poplar Avenue in Memphis, Tennessee, being part of what is identified as the "MHA Parcel" in a Reciprocal Easement Agreement of record with the Shelby County Register of Deeds as *Instrument No. 08115216* and in the First Amendment to the Reciprocal Easement Agreement of record with the Shelby County Register of Deeds as *Instrument No. 08148051* and legally described in Exhibit A hereto (such property hereinafter referred to as the "Site,"); and

WHERAS, Grantor, along with Methodist Healthcare-Memphis Hospitals on behalf of its Le Bonheur Children's Hospital division (formerly known as Le Bonheur Children's Medical Center) (collectively referred to hereinafter as the "Voluntary Parties") entered into a Brownfield Voluntary Agreement (Site Number 79-846) with TDEC pursuant to Tennessee Code Annotated §68-212-224 for the purpose of addressing the real or perceived threat of the presence on the Site of hazardous substances, solid waste or other pollutants; and

WHEREAS, in accordance with work plans approved by TDEC and the terms of the Brownfield Voluntary Agreement, the Site has been investigated and remediated to levels acceptable for the limited residential and commercial uses; and

WHEREAS, pursuant to the Brownfield Voluntary Agreement, the Grantor has agreed to impose certain land use restrictions on the Site as set forth hereinafter and has agreed to preserve and maintain these restrictions.

NOW, THEREFORE, in consideration of the foregoing, the Grantor hereby declares that the Site should be held, sold, and conveyed subject to the following land use restrictions. Said land use restrictions shall run with the land and shall be binding on all parties having any right, title or interest in the Site or any part thereof, their heirs, successors, successors-in-title, and

assigns, and shall inure to the benefit of each owner thereof and to TDEC and the respective successors and assigns of such parties:

Description of Affected Property (the Site):

The Site is approximately 2.2 acres and is located at the northeast intersection of Poplar Avenue and Ayers Street in Memphis, Tennessee. A legal description of the Site is attached hereto as Exhibit A and maps depicting the location of the Site are attached hereto as Exhibit B.

Location of Contamination

Perchchloroethylene (PCE), other chlorinated solvents and aromatic hydrocarbons have been detected in shallow groundwater at the Site. PCE, polyaromatic hydrocarbons, lead and arsenic have been detected in soils at the Site. A map showing the location of environmental sampling locations and tables of sampling results are attached hereto as Exhibit C except for lead, which was detected, but below the residential screening number, and arsenic, which was below the regional natural background number.

Land Use Restrictions:

Grantor imposes the following restrictions:

1) The installation of groundwater wells and use of groundwater at, on, under or from the Site is prohibited, except for monitoring or remediation. Prior to any installation of water wells or use of groundwater (other than for monitoring or remediation), the Grantor, its successors, and/or assigns must obtain approval in writing from TDEC.

2) Except in the case of an emergency, the Grantor, its successors and/or assigns in title to the Site must notify TDEC prior to the commencement of any construction activities or any other land-disturbing activities which could generate fugitive dust on the Site. The Grantor, its successors, and/or assigns must demonstrate to the satisfaction of TDEC, through any necessary sampling and analysis approved by TDEC, that any construction activities or other land-disturbing activities will not pose a danger to public health, safety, or the environment. If polyaromatic hydrocarbon-contaminated soils are identified during construction activities or any other land-disturbing activities, the Grantor or other party encountering such soils must manage such soils in accordance with the performance-based approach set forth in the June 19, 2009 letter from Robert A. Binford, Director of the Division of Remediation, to Robert Lipscomb, Executive Director of MHA (a copy of which is attached hereto as Exhibit D). If soils contaminated with contaminants other than polyaromatic hydrocarbons are identified during construction activities or any other land-disturbing activities, the party encountering such soils agrees to manage such soils with a TDEC-approved soil management plan.

3) If it becomes necessary to excavate contaminated soils or as part of a response to an emergency (e.g., repairing utility lines or responding to a fire, flood or any other casualty), the Grantor, its successors and/or assigns in title to the Site must notify TDEC of such emergency as soon as possible but no more than forty-eight four (48) hours after having learned of such

emergency; must limit the area of disturbance to the minimum reasonably necessary to adequately respond to the emergency; must implement all reasonable measures necessary to limit actual or potential risk to health, safety, public welfare or the environment; and must manage, transport and/or dispose of any excavated contaminated soil in compliance with any soil management plan approved by TDEC or, in the absence of a soil management plan, in compliance with all applicable federal, state and local laws, regulations and ordinances including, without limitation, those pertaining to environmental protection and occupational safety.

4) A vapor mitigation system has been installed at the Site. No one shall disturb, modify, damage or remove any vapor mitigation system installed at or within any structure at the Site unless first approved in writing by TDEC and pursuant to an approved work plan. Any future replacement of such structures shall be equipped with an equivalent vapor mitigation system or, if approved in writing by TDEC, another vapor mitigation system.

5) The Grantor, its successors, and/or assigns in title to the Site shall have the right to go upon the Property for inspection, monitoring, sampling and performing any other activities consistent with or required by these land use restrictions or the Brownfield Voluntary Agreement.

6) Any approval of TDEC required by this Notice of Land Use Restrictions shall be in writing, must contain a reference to this instrument, and shall be maintained by the person or entity seeking such approval. Any person or entity that petitions the Department for any approval shall be responsible for any costs incurred by the Department in the review and oversight of work associated with the effort to obtain such approval.

7) The Grantor, its successors and/or assigns in title to the Site shall cause all grants, leases and other written transfers of interests in the Site to contain a provision expressly requiring all holders of such interests in the Site to accept such interests subject to the use restrictions, covenants, requirements and releases set forth in this Notice of Land Use Restrictions and not to violate any term or condition of this Notice of Land Use Restrictions. Nothing contained in this Paragraph shall be construed as limiting any obligation of the holder of an interest in the Site to provide any notice required by or pursuant to any federal, state or local law, regulation or ordinance.

Amendment and Termination

This Notice of Land Use Restrictions may be made less stringent or terminated by the Commissioner of TDEC if the risk has been eliminated or reduced so that less restrictive or no land use controls are protective of human health and the environment. Any person or entity seeking to make this Notice of Land Use Restrictions less stringent or terminated shall be responsible for any costs incurred by TDEC in the review and oversight of work associated with the request to make this Notice of Land Use Restrictions less stringent or terminated. No amendment to or termination of this Notice of Land Use Restrictions shall be effective until such amendment or instrument terminating this Notice of Land Use Restrictions is recorded in the Office of the Shelby County Register.

Enforcement

Any owner of the Site, any person eligible for liability protection under the Brownfield Voluntary Agreement, or any unit of local government having jurisdiction over any part of the Site may enforce this Notice of Land Use Restrictions by means of a civil action. The Commissioner of TDEC may enforce this Notice of Land Use Restrictions through the issuance of an Administrative Order or by means of a civil action, including one to obtain an injunction against present or threatened violations of the restrictions. Pursuant to T.C.A. § 68-212-213, any person who fails, neglects or refuses to comply with a land use restriction commits a Class B misdemeanor and is subject to the assessment of a civil penalty of up to ten thousand dollars ($10,000) per day.

Any person or entity owning, leasing, occupying or otherwise using the Site subsequent to the date of this Notice of Land Use Restrictions is hereby deemed to have covenanted and agreed not to sue and to have waived and released all rights that such person or entity may have against the Voluntary Parties, and each of their parents, subsidiaries, affiliates, successors and assigns and their shareholders, officers, directors, employees and agents for any and all claims, damages, losses, costs and expenses in any way arising out of or in connection with the environmental condition of the Site or the environmental condition of any off-site areas ever affected by the Site, including, but not limited to, claims arising under common law and claims arising under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, or any other federal, state or local statute, regulation or ordinance designed to protect public health or the environment.

Term

This Notice of Land Use Restrictions shall run with and bind the Site.

Severability

Invalidation of any of these covenants or restrictions by judgment or court order shall in no way affect any other provisions, which shall remain in full force and effect.

RE: Updated Notice That Petroleum Wastes Are Present Form
Former Mobil Bulk Terminal No. 41 181
423 North Dunlap Street
Memphis, Tennessee
TDEC Facility ID No. 9-799001

On behalf of Exxon Mobil Corporation (ExxonMobil), Conestoga-Rovers & Associates (CRA) herewith submits this Notice That Petroleum Wastes Are Present at the Site as required by the Tennessee Division of Remediation (TDOR). Mr. Chris Lagan of TDOR requested this notice in a phone conversation on May 5, 2005. This document is required by TDOR prior to granting closure of the Site.

If you have any questions, please feel free to contact the undersigned at (615) 778-2535 or ccole@craworld.com.

Yours truly,

CONESTOGA-ROVERS & ASSOCIATES

NOTICE THAT PETROLEUM WASTES ARE PRESENT

Notice is hereby given that pursuant to Rule 1200-1-7-.04(8)(g)7 of Tennessee Rule Chapter 1200-1-7, Solid Waste Processing and Disposal, the Director of the Tennessee Division of Remediation ("TDOR") has determined that no further remedial action is required even though disposed petroleum wastes remain on the below-described property. The TDOR has evaluated the situation and found that adequate investigation has been performed to conclude that the soils and/or groundwater impacted by the petroleum wastes do not contain hazardous constituents at levels that pose a significant threat to human health or the environment. No land use restrictions are warranted. This Notice is provided to inform prospective purchasers or users of the presence of the petroleum wastes, and that the TDOR should be contacted (see contact information below) prior to any removal of impacted soils or groundwater to ensure proper management and disposal of the removed materials. This Notice is to be filed with the Shelby County register of deeds whom shall record it and index it in the grantor index under the names of the owners of the land.

Concerned persons may contact the Manager, State Remediation Program; Tennessee Division of Remediation; 5th Floor, L & C Tower; 401 Church Street; Nashville, Tennessee 37243-1535; Telephone: (615) 532-0853; Fax: (615) 532-0886.

Witnesseth:

WHEREAS, Mr. Gary D. Steen (the "Grantor") is the owner of the real property located as described below and in Attachment 1, and hereinafter referred to as the "Property," and

WHEREAS, the Property has been found to contain disposed petroleum wastes even though no further actions to protect human health and the environment are necessary; and

NOW, THEREFORE, in consideration of the foregoing, the Grantor hereby declares that this Notice shall be applied to the Property, or the impacted portions thereof, as such is held, sold, and conveyed by all parties having any right, title, or interest in the Property or any impacted part thereof, their heirs, successors, successors-in-title, and assigns.

Location of Wastes:

The Site is located at 423 North Dunlap Street in Memphis, Shelby County, Tennessee. Specifically, the Site is located at the southeastern corner of the intersection of North Dunlap Street and the former L&N Railroad; the Site location is shown on the USGS topographic map presented on Figure 1. Impacted portions of the Site are included on Figures 6 through 10.

The legal description of property was obtained from the Shelby County register of deeds and is listed below:

Beginning at a point in the east line of Dunlap Street (72' wide), said point being 200' north of the tangent intersection of the east line of Dunlap and the north line of Lane

Ave.; thence N 00 degrees 07 minutes 45 seconds E along the east line of Dunlap Street a distance of 135.53' to a point; thence S 87 degrees 38 minutes 17 seconds E along a line parallel to the old abandon Memphis and Ohio Railroad Track a distance of 140.86' to a fence; thence S 01 degree 12 minutes 18 seconds E along the west line of 15' alley a distance of 127.02' (call = 135.10') to a fence corner; thence S 88 degrees 53 minutes 15 seconds W along the north line of Lot 80 a distance of 143.74' (call = 141.98') to the point of beginning, containing 18,633 square feet or 0.428 acres.

Term and Termination:

This Notice of Petroleum Waste Present shall run with the Property, or impacted portions thereof, unless/until this Declaration shall be canceled by the TDOR Director upon a finding by the TDOR that the petroleum wastes have been removed or have dissipated or degraded such that they are no longer obviously present. No such termination of this Notice shall be effective until such instrument terminating this Notice is recorded by the Shelby County Register of Deeds.

IN WITNESS WHEREOF, the undersigned has executed this instrument this _____ day of _____, 20__.

Dear Ms. Timm-Brock:

I am sending this is in reference to the 925 Poplar Avenue property in Memphis, Tennessee; the site was entered into the State Remediation Program (1998) due to the presence of petroleum-related compounds associated with the past use of the property and former UST locations. This serves as notification that the 925 Poplar Avenue property, known in our files as Churchs' Fried Chicken SRS-0379, is now classified as inactive and no further action with regard to the historic petroleum-related contamination is required. Please contact me at (615) 532-0860, or at danny.fox@tn.gov if you have any questions.

Sincerely,

Danny Fox

RE: Memphis Mental Health Institute, Memphis, TN, SRS 01119

Dear Mr. Stewart:

The Division has received and reviewed the Request for no Further Action status, for the Memphis Mental Health Institute site, located in Memphis, Tennessee. Based on the information supplied to the Division, the Division has determined that no further action is warranted at the site with regard to this issue. However, if additional information should be discovered at the facility, the Division reserves the right to reevaluate the no further action status of the site.

If you have any questions regarding this matter or wish to discuss this further, please feel free to contact Peter Bobo, State Remediation Program (615) 532-9304.

Facility ID #9-791029, Shelby County

Dear Mr. Wilensky:

The Division of Underground Storage Tanks has received the Permanent Closure Report for the referenced facility. The analytical results do not indicate contamination above the applicable cleanup levels. Based on the information available, the #1 2,000 gallon diesel UST approved for closure on the application dated December 2, 1998 can be considered closed. At this time no further investigation is required. However, the Division reserves the right to require additional action if necessary.

Rule 1200-1-15-.02(3)(a) requires owners/operators to notify the Division of any changes (removal, change-in-service, new installation, etc.) made in the UST system.

Information is available at *www.state.tn.us/environment/ust*

If you have any questions concerning this correspondence, call 368-7972.

Sincerely,

David Groce

Re: Final Approval of Contaminated Closure
Poplar Avenue PB
821 Poplar Avenue
Facility ID # 9-791083, Case #4, Shelby County

Dear Mr. Lee:

The Division of Underground Storage Tanks (Division) has received the Permanent Closure Report (PCR) dated July 31, 2015 for the referenced facility. Based on the information available, tank #1, #2, #3 and #4 all 10,000 gallon gasoline tanks removed on April 30, 2015 and tanks #5 and #6 both 550 gallon fuel oil tanks removed on May 6, 2015 can be considered closed. The Division will require no further action at this time, unless new information is discovered substantially changing the facts as we know them today.

Rule 0400-18-01-.03(1)(g) states, in part: "Any change in the status of the tanks at a petroleum UST facility shall be reported within thirty (30) days of said change. This includes but is not limited to changes of ownership, upgrading or replacement of tanks, changes in mailing address, permanent closure of a tank compartment, and changes in service. Such reports shall be made using an amended notification form."

If an amended notification form has not been submitted, then complete and mail the form to:

Re: Letter of No Further Action
Auto-Chlor
Site ID# 79-774

Dear Mr. Northcutt

This letter acknowledges completion of the Agreed Actions required of Auto-Chlor System, LLC in the Brownfield Voluntary Agreement dated September 19, 2016, and relating to the property located at 746 Poplar Avenue, Memphis, Tennessee. In consideration of the investigations and remedial actions conducted under the Brownfield Voluntary Agreement, the Department shall require no further action of Auto-Chlor System, LLC for the Site so long as the recorded land use restrictions are observed. As a reminder, the land use restrictions do not allow for groundwater located on, under or from a designated portion of the Site, as provided in the Notice of Land Use Restriction, to be used without approval from the Division.

The Division appreciates the efforts Auto-Chlor System, LLC took to address the environmental issues identified at the above referenced property. If we can be of further assistance please contact Evan Spann at Evan.W.Spann@tn.gov or 615-532-0919.

Sincerely,

Steve Goins
Director, TDEC Division of Remediation

Re: Response Complete Letter

Notice to Proceed with Well Abandonment Work Plan and Cost Estimate, Not to Exceed $500.00

Dear Mr. Cannon:

The Drycleaner Environmental Response Program (DCERP) is pleased to inform you that based on our review of the Prioritization Investigation (PI) Report, Solvent Impact Assessment (SIA) Report, Groundwater Monitoring Reports and the Indoor Air Quality Monitoring Report, we have determined that no further remedial response is necessary at Spic-N-Span Cleaners. This determination was based on the absence of drycleaning contaminants in the soil and the low levels of contamination in the groundwater. Site conditions and findings are described in the Response Complete Summary (RCS).

The Response Complete Summary (RCS) was prepared by the DCERP staff and signed by the Division Director. This document provides a summary of the relevant investigations that have been completed under the DCERP. The attached copy is provided for your information and use. The original RCS will be maintained in the agency files.

This site will return to non-fund eligible status once the DCERP installed wells located on site are abandoned in accordance with State requirements, and any investigation-derived waste (IDW) generated by DCERP authorized work has been disposed of, and the final reimbursement

request has been submitted to DCERP. We are authorizing MES $500.00 to provide DCERP with a cost estimate to abandon site wells and dispose of any remaining IDW.

If future investigations find contamination attributable to drycleaner-related site operations, you may re-apply to the Fund, if necessary. Based on currently available site information, we are confident that this site does not represent a threat to the environment.

We appreciate your dedication and perseverance in seeing this project through to completion and thank you for ensuring that the environment is protected for future generations of Tennesseans. If you have any questions regarding this letter or the RCS, please contact me at 615.741.4998 or Nancy Boisvert, Program Manager, at 615.253.3876.

Sincerely,

James D. Gilbert, P.G

RE: Final Approval of UST Closure
City of Memphis Fire Department/Air Mask Services
1010 Faxon Avenue, Memphis, TN
FID # 9-791109, Shelby County

Dear Mr. Turner:

The Division of Underground Storage Tanks has received the analytical results dated September 23, 1991, from the closure assessment for the above referenced facility. The results do not indicate contamination above the applicable cleanup levels. Based on the information available, UST # 1 (500 gallon diesel), approved for closure on the application dated August 22, 1991, can be considered closed. At this time no further investigation is required. However, the Division reserves the right to require additional action if necessary.

Rule 1200-1-15-.02(3)(a) requires owners/operators to notify the Division of any changes (removal, change-in-service, new installation, etc.) made in the UST system. Since a notification form showing the tank has been permanently closed and removed from the ground has already been submitted to the Nashville Central Office, this completes the closure process.

We certainly appreciate the cooperation you have given this office. If we can be of further assistance, or if you have any questions concerning this correspondence, please give me a call at (901) 368-7991.

Sincerely yours,

Chuck Nance, Environmental Specialist

Facility ID # 9-799039, Shelby County

Dear Mr. Kanschat:

The Division of Underground Storage Tanks (Division) has received the August 17, 2015 Permanent Closure Report for the referenced facility. The analytical results do not indicate contamination above the Initial Screening Levels. Based on the information available, tank #1 1000 gallon unknown petroleum and tank #2 500 gallon unknown petroleum that were removed on August 12, 2015 can be considered closed. The Division will require no further action at this time, unless new information is discovered substantially changing the facts as we know them today.

Rule 0400-18-01-.03(1)(g) states, in part: "Any change in the status of the tanks at a petroleum UST facility shall be reported within thirty (30) days of said change. This includes but is not limited to changes of ownership, upgrading or replacement of tanks, changes in mailing address, permanent closure of a tank compartment, and changes in service. Such reports shall be made using an amended notification form."

If an amended notification form has not been submitted, then complete and mail the form to:

PROPOSAL CLIENT CHECKLIST
ASTM E 1527-13 Phase I Environmental Site Assessment

Mark X	1. Applicability
	Please identify from the list below all applicable reasons for requesting this Phase I Environmental Site Assessment:
☐	a. Person seeking to establish the innocent landowner defense to CERCLA
☐	b. Person seeking to establish the bona fide prospective purchaser liability protection
☐	c. Person seeking to establish the contiguous property owner liability protection
☐	d. Person conducting site characterization and assessments with the use of a (Brownfields) grant awarded under CERCLA
☒	e. As part of due diligence prior to purchase
☒	f. To obtain financing
☐	g. Prior to selling the property
☐	h. Renewing a lease
☐	i. Terminating a lease or vacating a property
☐	j. In anticipation of a property/business ownership transaction
☐	k. To establish baseline conditions at the property
☐	l. To identify potential business environmental risks associated with the property
☒	m. Other (please explain) (4% LIHTC Application with THDA)

Yes	No	2. Communication Responsibilities
		The user of the Phase I ESA is responsible for obtaining the following information that will help the environmental professional (EnSafe) identify the possibility of recognized environmental conditions. Answers may be conveyed verbally or in writing.
☒	☐	a. Are there any environmental cleanup liens or activity and land-use limitations filed or recorded against the subject property under federal, tribal, state, or local law, based on review of recorded land titles and judicial lien records? If yes, **<enter text here>** Title Review is under way. to determine any and all environmental cleanup liens or activity and land-use limitations filed or recorded against the subject property. Entire site is subject to BVA
☒	☐	b. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, **<enter text here>** Property was subject to environmental remediation as part of redevelopment project. Specific site is subject to a witness barrier (part of O&M Plan). Conducting ESA Phase I to determine any environmental issues on remaiing portion as part of due diligence for Tax Credit Application
☐	☐	c. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? In other words, what is the relationship of the purchase price to the fair market value of the property, if the property were not contaminated? Long-term , nominal ground lease anticipated with the land owner (Memphis Housing Authority) - as part of Tax Credit Transaction (New Construction)
☐	☐	If you conclude that there is a difference, is the lower purchase price related to contamination that is known or believed to be present at the property? N/A
☒	☐	d. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (i.) What are the past uses of the property? Former Public Housing Site (ii.) What specific chemicals are present or once were present at the property? (iii.) Do you know of spills or other chemical releases that have taken place at the property? (iv.) Do you know of any environmental cleanups that have taken place at the property? (v.) Do you have other information relevant to the ESA? **<enter text here>**
☒	☐	e. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? If yes, **<enter text here>** The overall site is subject to a Brownfield Voluntary Agreement and a witness barrier/O&M Plan that was provided to the environmental consultant. A portion of the specific site has a witness barrier delineated area.

Mark X	3. Special Reporting Requirements (if applicable)
	Specify whether you, your client, and/or lender have special requirements for the ESA, beyond that of 40 CFR 312.
☒	a. No additional requirements apply to this Phase I ESA.
☒	b. Additional requirements apply and have been attached. Project has HUD financing and NHTF financing

PROPOSAL CLIENT CHECKLIST
ASTM E 1527-13 Phase I Environmental Site Assessment

Mark X	4. ASTM Non-Scope Consideration and Risk Issues
	Please review the following list of business environmental risk issues. If you desire any of these issues be addressed, please check the appropriate box, and an EnSafe representative will contact you, as necessary, to discuss further and determine whether modifications to the attached cost estimate will be necessary.
☐	a. Asbestos-Containing Materials — See HUD, NHTF & THDA Guidelines for ESA Phase I Reports
☐	b. Biological Agents
☐	c. Cultural and Historic Resources
☐	d. Ecological Resources
☐	e. Emerging contaminants (including substances not defined by CERCLA as hazardous substances, e.g., PFAS)
☐	f. Endangered Species
☐	g. Environmental Regulatory Compliance
☐	h. Health and Safety Compliance
☐	i. Indoor Air Quality
☐	j. Industrial Hygiene
☐	k. Lead-Based Paint
☐	l. Lead in Drinking Water
☐	m. Mold
☐	n. Radon
☐	o. Vapor Intrusion
☐	p. Wetlands
☐	q. Other (please specify) **<enter text here>**
☐	r. We do not desire additional consideration for non-scope items in the Phase I ESA report.

Yes	No	5. SBA Environmental Investigation
☐	☒	Is this Phase I ESA being conducted to satisfy environmental policy requirements of the Small Business Administration (SBA), or is SBA otherwise involved in lender or development aspects of this property?

6. Report Addressed

Ms. Allison L. Harris
Ensafe
5724 Summer Trees Drive
Memphis, TN 38134

RE: HUD / Department of Housing and Urban Development, Edgeview at Legends Park, Senior Affordable Housing, 945 Peach Avenue, Memphis, Shelby County, TN

Dear Ms. Harris:

In response to your request, we have reviewed the documents you submitted regarding your proposed undertaking. Our review of and comment on your proposed undertaking are among the requirements of Section 106 of the National Historic Preservation Act. This Act requires federal agencies or applicant for federal assistance to consult with the appropriate State Historic Preservation Office before they carry out their proposed undertakings. The Advisory Council on Historic Preservation has codified procedures for carrying out Section 106 review in 36 CFR 800 (Federal Register, December 12, 2000, 77698-77739).

After considering the documentation submitted, it is our opinion that there are no National Register of Historic Places listed or eligible properties affected by this undertaking. We have made this determination because either: no National Register listed or eligible Historic Properties exist within the undertaking's area of potential effects, the specific location, size, scope and/or nature of the undertaking and its area of potential effects precluded affects to Historic Properties, the undertaking will not alter any characteristics of an identified eligible or listed Historic Property that qualify the property for listing in the National Register, or it will not alter an eligible Historic Property's location, setting or use. We have no objections to your proceeding with your undertaking.

If your agency proposes any modifications in current project plans or discovers any archaeological remains during the ground disturbance or construction phase, please contact this office to determine what further action, if any, will be necessary to comply with Section 106 of the National Historic Preservation Act. If you are applying for federal funds, license or permit, you should submit this letter as evidence of consultation under Section 106 to the appropriate federal agency, which, in turn, should contact us as required by 36 CFR 800. If you represent a federal agency, you should submit a formal determination of eligibility and effect to us for comment. You may direct questions or comments to ((615) 687-4780, Jennifer.Barnett@tn.gov). This office appreciates your cooperation.

Sincerely,

E. Patrick McIntyre, Jr.
Executive Director and
State Historic Preservation Officer

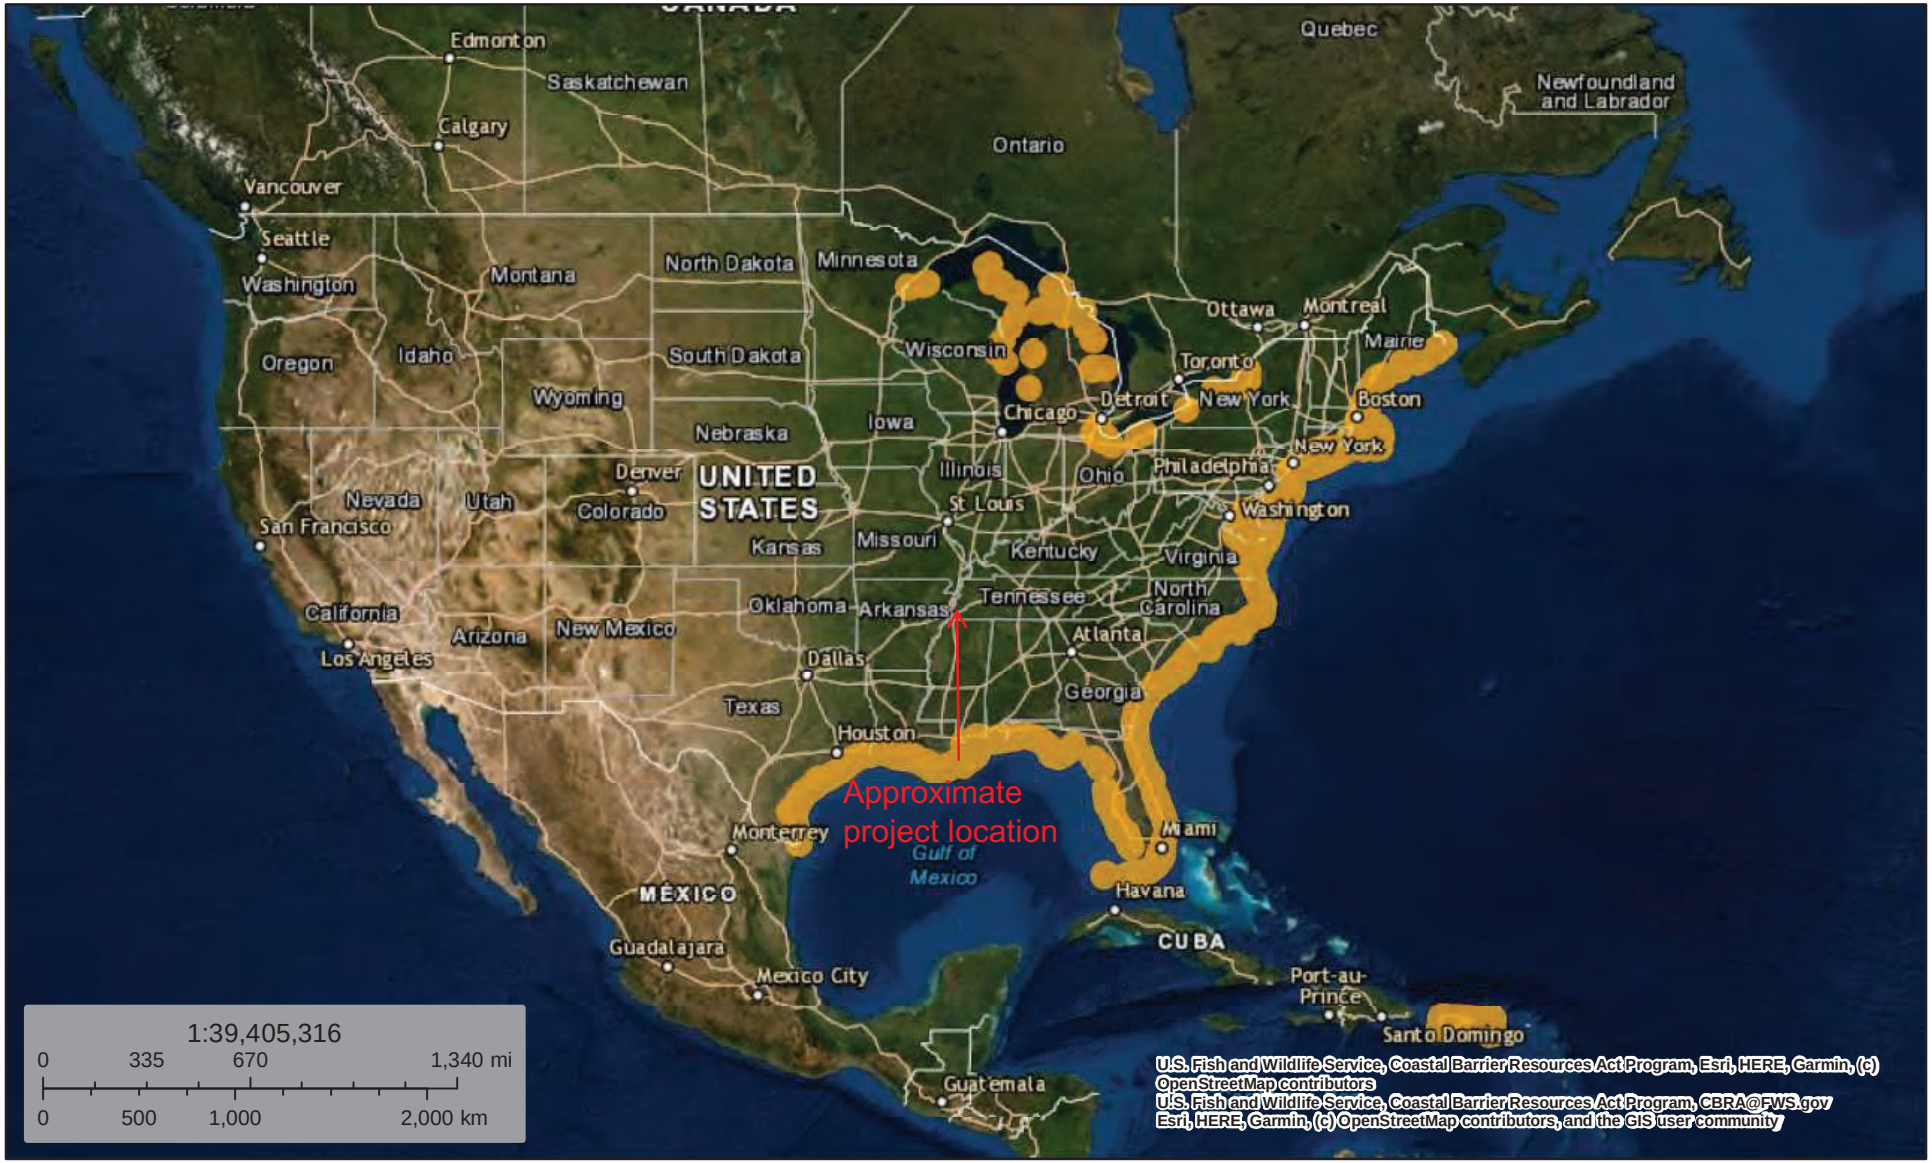
Coastal Barrier Resources System

Coastal Barrier Resource System



August 13, 2019

CBRS Units

This map is for general reference only. The Coastal Barrier Resources System (CBRS) boundaries depicted on this map are representations of the controlling CBRS boundaries, which are shown on the official maps, accessible at https://www.fws.gov/cbra/maps/index.html. All CBRS related data should be used in accordance with the layer metadata found on the CBRS Mapper website.

The CBRS Buffer Zone represents the area immediately adjacent to the CBRS boundary where users are advised to contact the Service for an official determination (http://www.fws.gov/cbra/Determinations.html) as to whether the property or project site is located "in" or "out" of the CBRS.

CBRS Units normally extend seaward out to the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS mapper.

Re: Phase II Environmental Site Assessment
Block A, Legends Park Subdivision
Memphis, Tennessee

Dear Mr. Thomas:

EnSafe Inc. is pleased to provide this Phase II Environmental Site Assessment (ESA) for Block A (Site) at the Legends Park Subdivision in Memphis, Tennessee.

SITE DESCRIPTION AND HISTORY

The Site is located on a 4.77-acre vacant parcel (Shelby County Parcel 051017 00018) within the 30.91-acre Legends Park Subdivision. According to the Phase I ESA performed by EnSafe (December 2021), the Site has been developed since at least 1897 with single- and multi-family residences and was part of the Dixie Homes public housing development from 1937 until 2006, when the area was cleared for redevelopment as the Legends Park Subdivision. Additionally, the Phase I ESA identified a former clothes cleaner and presser at the Site. No further information regarding operations at the cleaners was identified, but it could have potentially operated as a drycleaner. Additionally, soils containing polyaromatic hydrocarbons (PAHs) were used as fill material during redevelopment of the west-adjacent property.

The Site is included in the Brownfield Voluntary Agreement (BVA) Site 79-846, effective date September 9, 2009. The BVA was based on the presence of hydrocarbons and dry-cleaning solvents in soil gas and groundwater south (hydraulically upgradient) of the Site. The BVA instituted Land Use Restrictions on the Site, including the prohibition of water wells and use of groundwater on the property; the management of any discovered contaminated soils in accordance with a Tennessee Department of Environmental Conservation (TDEC)-approved soil management plan; and the installation of soil vapor mitigation systems for buildings constructed at the property, if needed.

This Phase II ESA evaluated soil, groundwater, and soil gas at the Site for potential chemicals of concern associated with historical operations at the Site and surrounding area properties.

DATA COLLECTION PROCEDURES

Soil, groundwater, and soil gas sampling was conducted at the Site following the procedures outlined in the approved Phase II proposal, dated November 9, 2021, and Phase II proposal addendum, dated November 10, 2021. Field work was conducted by EnSafe on December 8 through 10, 2021. Sample locations are shown on Figure 1 (Attachment A).

Before initiating field sampling, Tennessee One Call and a private subsurface utility location service identified the locations of buried utilities and other structures that would be damaged or would prevent the advancement of soil borings at each sampling location.[1] Boring locations were adjusted to avoid the presence of anomalies indicating unknown objects and/or utilities in the shallow soils.

Soil Sampling

Five soil borings were completed using Direct Push Technology (DPT) drilling methods by McCray Drilling of Memphis, Tennessee. At each location, the soil was logged for lithology using the Unified Soil Classification System, screened with a photoionization detector (PID), and further examined by EnSafe personnel for visual and olfactory indications of contamination. Two soil samples were then collected from each boring. PID readings in soil did not exceed 2.5 parts per million (ppm). Lithologic descriptions and field screening results for the soil borings are recorded on boring logs provided in Attachment B.

All soil samples were collected in laboratory-provided containers, placed on ice, and delivered under strict chain-of-custody to Waypoint Analytical in Memphis, Tennessee for laboratory analysis. Soil samples were submitted for analysis of volatile organic compounds (VOCs) by United States Environmental Protection Agency (U.S. EPA) Method 8260B, PAHs by U.S. EPA Method 8270D SIM, Resource Conservation and Recovery Act (RCRA) 8 Metals by U.S. EPA Method 6010, and Extractable Petroleum Hydrocarbons (EPH) by Tennessee EPH Method.

Groundwater Sampling

Five temporary groundwater monitoring wells were installed in each of the soil borings after the completion of soil sampling. The temporary wells consisted of a 10-foot long, ¾-inch diameter poly-vinyl chloride prepacked screen attached to a riser pipe and set to the terminal depth of the boring. The wells were left undisturbed for at least one day following construction to allow for groundwater recharge.

Groundwater was measured in all wells following installation. The wells were developed and purged to ensure communication with the saturated zone and minimize turbidity. Groundwater was sampled using a peristaltic pump equipped with new, dedicated Teflon tubing. Turbidity measurements were collected using a Hach 2100Q handheld turbidity meter. Initial turbidity measurements exceeded 50 nephelometric turbidity units (NTUs). However, final turbidity measurements before sampling were below 10 NTUs for all wells. The samples were field filtered using 0.45 µm filter cartridges at the time of collection.

[1] The private subsurface utility locater, Alsip Locating Service, used ground-penetrating radar equipment to look for the presence of underground utilities and other structures at the sampling locations.

Groundwater samples were collected in laboratory-provided containers, placed on ice, and submitted under strict chain-of-custody to Waypoint Analytical for analysis. Groundwater samples were submitted for laboratory analysis of VOCs by U.S. EPA Method 8260B, PAHs by U.S. EPA Method 8270D SIM, RCRA 8 Metals by U.S. EPA Method 6010, and EPH by Tennessee EPH Method. Following sample collection, each temporary groundwater well was removed, and the borehole was abandoned with hydrated bentonite clay to the ground surface.

Soil Gas Sampling

Five soil gas sampling points were advanced to 3-4 feet below the ground surface using a hammer drill. At each location, a stainless-steel screen probe and 0.25-inch diameter Teflon tubing were inserted in the borehole. The screens were secured in place with sand. Bentonite clay was used at the surface to seal the borehole and to prevent infiltration from ambient air.

Before sampling, the soil gas borings were allowed to stabilize for a minimum of 2 hours. All fittings on the Summa manifolds were inspected for a proper fit and seal using shut-in tests. Shut-in tests were performed by using a purge canister to create a vacuum in the sample train and the gauge on the manifold was observed for at least 2 minutes to determine if the pressure remains stable. Each system was purged using a sacrificial Summa canister. Isopropanol was used as a tracer gas to indicate any potential leaks within each sample setup. Soil gas samples were collected in laboratory-provided, individually-certified, 6-liter Summa canisters with a designated soil gas manifold. The manifolds' flow rate were set to 200 milliliters per minute by the laboratory, as recommended by the referenced guidance documents.[2] Each sample was collected over an approximately 30-minute period.

All samples, along with pre- and post-canister vacuum pressures, canister serial numbers, sample identifications, sampling dates, and required analyses were recorded on the chain-of-custody form. The samples were shipped via overnight courier to Pace National of Mount Juliet, Tennessee. Canisters were analyzed using the U.S. EPA Method TO-15 for VOCs. Field sampling logs for soil gas samples are included in Attachment C.

ANALYTICAL RESULTS

Analytical results for the soil samples were compared to the November 2021 U.S. EPA Regional Screening Levels (RSLs) for both residential and industrial land use and the September 2006 TDEC Department of Underground Storage Tank's Initial Screening Levels (ISLs). Metals were also compared to the TDEC Hazardous Trace Elements in Tennessee Soils Background Levels (TDEC 2001). RSLs are based on a lifetime target cancer risk of 1E-6 and a target hazard quotient of 0.1, which is the most protective exposure scenario. The detected concentrations for soil are summarized in Table 1 (Attachment D).

[2] In accordance with the New Jersey Department of Environmental Protection Vapor Intrusion Technical Guidance, Version 5.0, (May 2021).

Groundwater analytical results were compared to the U.S. EPA RSLs for tap water, U.S. EPA Maximum Contaminant Levels (MCLs), and TDEC ISLs. RSLs are based on the same lifetime target cancer risk and target hazard quotient as was used to assess the soil sample results. Laboratory detections for the groundwater samples are summarized in Table 2 (Attachment D).

Analytical results for the soil gas samples were compared to the November 2021 U.S. EPA Vapor Intrusion Screening Levels (VISL) for residential and commercial air. In accordance with TDEC guidance, detected chemicals were evaluated based on the cumulative target lifetime carcinogenic risk of 10E-6 and a target noncarcinogenic hazard quotient of 0.1. Laboratory detections and exceedances for the soil gas samples are summarized in Table 3 (Attachment D).

Laboratory reports for soil, groundwater, and soil gas are provided in Attachment E.

Soil Analytical Results

RCRA 8 Metals

Seven metals were detected in soils sampled from the five soil borings. Arsenic and chromium[3] exceeded their respective residential and/or industrial RSLs in all ten soil samples; however, arsenic was below Tennessee background concentrations in nine soil samples and chromium was below Tennessee background concentrations in seven soil samples. Arsenic exceeded the Tennessee background concentration of 10 milligrams/kilogram (mg/kg) from 16 to 20 feet below ground surface (bgs) at SB05. Chromium exceeded the Tennessee background concentration of 20 mg/kg from 28 to 32 feet bgs at SB02, 24 to 28 feet bgs at SB03, and 28 to 32 feet bgs at SB04.

Volatile Organic Compounds

Eleven VOCs were detected in soils sampled from the five soil borings. All VOC detections were reported below their respective RSLs and TDEC ISLs.

Polynuclear Aromatic Hydrocarbons

Seventeen PAHs were detected in soils sampled from the five soil borings. Only one PAH detection exceeded screening levels. The concentration of benzo(a)pyrene from 4 to 8 feet bgs at SB02 (0.126 mg/kg) exceeded its residential RSL of 0.11 mg/kg, but did not exceed its industrial RSL.

Extractable Petroleum Hydrocarbons

EPH was detected in soils sampled from three of the soil borings. All detected EPH concentrations were reported below the TDEC ISL of 500 mg/kg.

[3] Total chromium does not have established residential and industrial soil RSLs, so chromium detections were conservatively compared to the RSLs for hexavalent chromium.

Groundwater Analytical Results

RCRA 8 Metals

Two metals were detected in groundwater sampled from the five temporary wells. The metal detections were reported below their respective RSLs and MCLs.

Volatile Organic Compounds

Two VOCs were detected in groundwater sampled from two of the temporary wells. The VOC detections were reported below their respective RSLs and TDEC ISLs.

Polynuclear Aromatic Hydrocarbons

Three PAHs were detected in groundwater sampled from two of the temporary wells. All detections were reported below RSLs and TDEC ISLs. MCLs are not established for these three parameters.

Extractable Petroleum Hydrocarbons

EPH was detected in groundwater sampled from all five temporary wells. EPH detections ranged from 0.0576 milligrams per liter to 0.366 milligrams per liter; however, screening levels are not established for EPH in groundwater.

Soil Gas Analytical Results

Twenty-seven VOCs were detected in soil gas sampled from the five locations at the Site. Two VOCs were were reported above U.S. EPA residential VISLs. Benzene and naphthalene exceeded their respective residential VISLs in SB01. Naphthalene also exceeded its commercial VISL in SB01.

Risk screening was performed using the U.S. EPA VISL Risk Calculator. Input parameters for the U.S. EPA VISL calculator included location-specific concentrations and default exposure assumptions for risk screening; VISL risk outputs are provided in Attachment F and summarized in Table 4 (Attachment D). TDEC generally requires response actions (which could include a vapor barrier, mitigation system, monitoring, etc.) when risk is above 1E-05 and/or hazard is above 1.0. For the residential exposure scenario, carcinogenic risk ranged from 6.61E-07 to 1.20E-05 and hazard (non-carcinogenic risk) ranged from 0.00442 to 0.315. One soil gas location (SG01) exceeded the risk of 1E-05.

CONCLUSIONS

VOCs and EPH were not detected above screening levels in soil or groundwater samples. One PAH (benzo(a)pyrene) exceeded its residential RSL in soil sampled from 4 to 8 feet bgs at SB02. PAHs and metals were not detected above screening levels in groundwater samples.

Arsenic and chromium concentrations in soil were above residential and/or industrial RSLs in all ten soil samples. Arsenic exceeded the Tennessee background concentration in one soil sample and chromium exceeded the Tennessee background concnentration in three soil samples; however, Tennessee background concentrations are based on a statistical study of naturally occurring metals concentrations sampled throughout the state of Tennessee and are established by concentrations within the 75 percent quartile. Detected concentrations of arsenic and chromium in soil sampled at the Site are not statistically higher than Tennessee background concentrations.

Two VOCs (benzene and naphthalene) were detected above U.S. EPA residential and/or commercial VISLs in soil gas at SG01. Elevated concentrations of VOCs in soil gas and the above calculated risk threshholds indicate that vapor mitigation should be considered for future development within the sample area of SG-01. The intended use of the property and location of future structures will dictate further recommendations for mitigation, which may include, but not be limited to a passive mitigation system or vapor barrier.

LIMITATIONS

The information presented in this report was obtained through performance of the approved proposals dated November 9 and 10, 2021. Report users should recognize that any sampling or testing activities are inherently limited, in that conditions at other locations and depths within the Site may vary from those at the locations where samples or measurements were obtained. The ability of EnSafe to interpret results and draw conclusions about Site conditions is similarly limited and subject to the availability and quality of information that led EnSafe to select sampling or measurement locations, and to practical limits in the extent of sampling that was conducted. EnSafe has conducted the professional assessment services with a level of care and skill consistent with generally accepted environmental consulting industry standards.

Report results apply solely to conditions existing at the time that EnSafe obtained samples or conducted tests. Only the party for whom this report was originally prepared has the right to make use of and rely upon this report. Reuse of this report or any portion thereof for other than its intended purpose shall be at the user's sole risk. EnSafe makes no representation as to the accuracy or completeness of information prepared by other parties.

Sincerely,

EnSafe Inc.

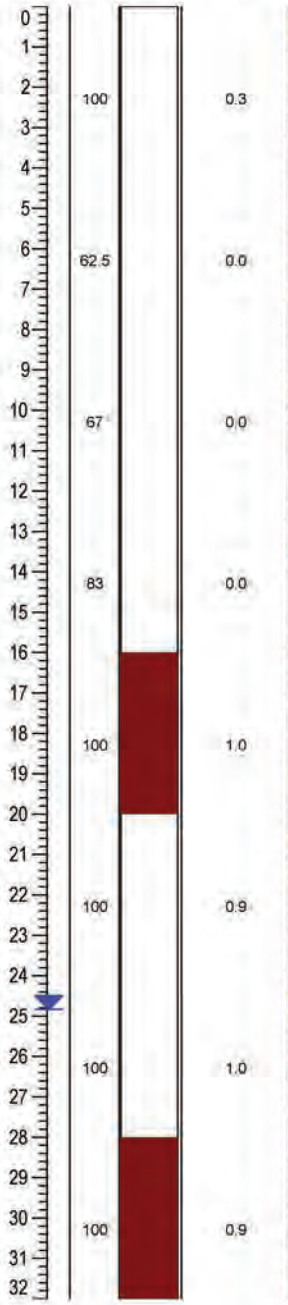
Client:	PennRose	**Drill Equipment:**	Geoprobe DPT	**Start Date/Time:**	12/09/2021 0825
Project #:	0888830988	**Drilling Company:**	McCray Drilling	**End Date/Time:**	12/09/2021 0900
Purpose:	Phase II ESA	**Geologist:**	D. Fuehrer	**Total Depth:**	32'
Location:	Block A, Legends Park, Memphis, TN			**Sample Method:**	4' Continuous



Depth (ft)	% Recovery	Sample Interval	OVM	Symbol	USCS	Lithologic Description (Visual-Manual Description (ASTM D 2488-06))
0–4	100		0.3		CL	Grass surface. Brown silty clay with sand and gravel and trace ferrigenous sand, dry, no odor or stains.
4–8	62.5		0.0		CL	Brown silty clay with gravel layer at 7 ft then dark gray silty clay at 8 ft, fissile.
8–12	67		0.0		CL	Green-gray silty clay with traces of fine gravel and pebbles, moist, no odor.
12–16	83		0.0		CL	Brown with some green silty clay, gravel and sand from 12 to 12.5 ft, no odor.
16–20	100		1.0		CL	Brown silty clay, very moist to wet, soft, no odor or stains.
20–24	100		0.9		CL	Brown to gray silty clay, moist, soft, no odor or stains.
24–28	100		1.0		CL	Brown silty clay, moist, stiff, uniform, no odor or stains.
28–32	100		0.9		CL	Yellowish-orange-brown silty clay, slightly moist, stiff, uniform, no odor or stains. Set temporary well at 32 ft.

Ref: Analytical Testing
Lab Report Number: 21-343-0097
Client Project Description: Legends Park
Project No. 0888830988

Dear Allison Harris:
Waypoint Analytical, LLC. received sample(s) on 12/9/2021 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

Volatile Organic Compounds - GC/MS Method 8260B
Sample 95553 (LEGSBo312-16)
QC Batch No: L589847/L589843
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

TN EPH Method TN EPH
Sample 95549 (LEGSBO116-20)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95550 (LEGSBO124-28)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95551 (LEGSBO204-08)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95552 (LEGSBO228-32)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95553 (LEGSBo312-16)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95554 (LEGSBO324-28)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95555 (LEGSBO416-20)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95557 (LEGSBO516-20)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 95558 (LEGSBO528-32)
QC Batch No: L589528/L589313
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Ref: Analytical Testing
Lab Report Number: 21-344-0104
Client Project Description: Legends Park
Project No. 0888830988

Dear Ms. Allison:
Waypoint Analytical, LLC. received sample(s) on 12/10/2021 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

Ref: Analytical Testing
Lab Report Number: 21-344-0103
Client Project Description: Legends Park
Project No. 0888830988

Dear Ms. Allison Harris:
Waypoint Analytical, LLC. received sample(s) on 12/10/2021 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method. Where the laboratory was not responsible for the sampling stage (refer to the chain of custody) results apply to the sample as received.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2021) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

Rebekah Ross

Rebekah Ross
Project Manager

Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.

CASE NARRATIVE

Volatile Organic Compounds - GC/MS Method 8260B
Sample 96223 (LEGGSB01)
QC Batch No: L589858/L589845
The sample was diluted due to the nature of the sample matrix. Reporting limits have been adjusted accordingly.

Semivolatile Organic Compounds - GC/MS (SIM) Method 8270D SIM
QC Batch No: L590228/L590223
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 96225 (LEGGSB03)
QC Batch No: L590228/L590223
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

Sample 96227 (LEGGSB05)
QC Batch No: L590228/L590223
Surrogate(s) were flagged for recoveries in the associated project sample. During the extraction step, the extraction technician noted that a significant emulsion formed. Batch QC samples (Method Blank and Laboratory Control Samples) all showed surrogate recoveries within QC limits, indicating that the biased recoveries were due to the sample matrix.

TN EPH Method TN EPH
Sample 96224 (LEGGSB02)
QC Batch No: L590249/L589700
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

Sample 96227 (LEGGSB05)
QC Batch No: L590249/L589700
Surrogate(s) was flagged for recovery outside QC limits in this project sample. This sample was re-analyzed for verification, and/or dilution of target analytes. Batch QC samples (method blank and laboratory control samples) all showed surrogates within QC limits.

RE: Project: Legends Park Phase II
Pace Project No.: 10590787

Dear Allison Harris:

Enclosed are the analytical results for sample(s) received by the laboratory on December 09, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

PROJECT NARRATIVE

Project: Legends Park Phase II
Pace Project No.: 10590787

Method: **TO-15**
Description: VOA (MS) TO-15
Client: EnSafe
Date: December 14, 2021

General Information:
5 samples were analyzed for TO-15 by Pace National Mt. Juliet. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 1787405

B: Analyte was detected in the associated method blank.

- R3739465-3 (Lab ID: R3739465-3)
  - 1,4-Dichlorobenzene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Additional Comments:

QUALIFIERS

Project: Legends Park Phase II
Pace Project No.: 10590787

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
J	Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

CFC-113 = Trichloro-1,2,2-trifluoroethane, 1,1,2-
1,1,1-TCA = Trichloroethane, 1,1,1-
1,1-DCA = Dichloroethane, 1,1-
1,1-DCE = Dichloroethylene, 1,1-
cis-1,2-DCE = Dichloroethylene, cis-1,2-
IPA = Isopropanol
MEK = Methyl Ethyl Ketone (2-Butanone)
MTBE = Methyl tert-Butyl Ether
TCE = Trichloroethylene
PCE = Tetrachloroethylene
AF_{gw} = Attenuation Factor Groundwater
AF_{ss} = Attenuation Factor Sub-Slab
AT_w = averaging time - composite worker
BP = Boiling Point
CA = cancer
C_{gw} = Groundwater Concentration
C_{hc} = Groundwater Vapor Concentration
$C_{i,a}$ = Indoor Air Concentration
C_{sg} = Soil Gas Concentration
C_{ssv}Target = Target Soil Gas
C_{vp} = Pure Phase Vapor Concentration
CDI = Chronic Daily Intake
CR = Carcinogenic Risk
ED_w = exposure duration - composite worker
Ef_w = exposure frequency - composite worker
ET_w = exposure time - composite worker
H' = Dimensionless Henry's Law Constant at 25°C
HLC = Henry's Law Constant
HQ = Hazard Quotient
IUR = Chronic Inhalation Unit Risk $(ug/m^3)^{-1}$
LEL = Lower Explosive Limit
LT = lifetime
MCL = Maximum Contaminant Level
MW = Molecular Weight (g/mole)
NC = noncancer
RfC = Chronic Inhalation Reference Concentration (mg/m^3)
S = Water Solubility Limit
T_r = Critical Temperature
TCR = Target Cancer Risk
THQ = target hazard quotient
TR = target risk
VI = Vapor Intrusion
VISL = Vapor Intrusion Screening Level
VP = Vapor Pressure
$\Delta H_{v,b}$ = Enthalpy of vaporization at the normal boiling point
Ef_{res} = Resident Exposure Frequency
Ef_w = Worker Exposure Frequency
EF_{0-2} = Exposure Frequency - age segment 0-2
EF_{2-6} = Exposure Frequency - age segment 2-6
EF_{6-16} = Exposure Frequency - age segment 6-16
EF_{16-26} = Exposure Frequency - age segment 16-26
Ed_{res} = Resident Exposure Duration
ED_{res-c} = Resident Exposure Duration - child
ED_{res-a} = Resident Exposure Duration - adult
Ed_w = Worker Exposure Duration
ED_{0-2} = Exposure Duration - age segment 0-2
ED_{2-6} = Exposure Duration - age segment 2-6
ED6-16 = Exposure Duration - age segment 6-16
ED_{16-26} = Exposure Duration - age segment 16-26
Et_{res} = Resident Air Exposure Time
Et_w = Worker Air Exposure Time
ET_{0-2} = Exposure Time - age segment 0-2
ET_{2-6} = Exposure Time - age segment 2-6
ET_{6-16} = Exposure Time - age segment 6-16
ET_{16-26} = Exposure Time - age segment 16-26

From: David Woolworth, *Roland, Woolworth & Associates*
To: Allison Harris, *Ensafe*

Subject: Legends Park HUD Noise Analysis

Summary

- Transportation noise was evaluated for the proposed Legends Park project on Peach Ave in Memphis based on HUD methods, field measurements, and double barrier acoustic analysis.
    - Aircraft and train noise was eliminated from the analysis based on distance.
    - Helicopter noise was measured in the field; lack of regular flights and measured levels eliminated tis source from the analysis.
- Highway noise (I-40) was determined to be the noise source of interest. The overall impact did not exceed 75dB, but a portion of the building falls in the “not normally acceptable” category for noise exposure according to HUD.
    - Highway traffic data was provided by TDOT and the pre-barrier DNL was determined using the HUD DNL online calculator.
    - I-40 is flanked by concrete barriers on both sides, and the far barrier acts as a reflector. The result is that the analysis uses a hybrid of HUD and double barrier methods to determine attenuation effects on the DNL.
        - The barrier analysis is broken down using HUD Noise Guide Chapter 5 methods, and each source (original sources (east and west bound, cars and heavy trucks) and corresponding reflected images (double barrier method)) is evaluated using the HUD barrier attenuation calculator to determine the barrier’s effect on each source at each level of the building.
            - Attenuation of the barrier on each individual source is evaluated, and all sources are logarithmically added together to determine DNL.
    - The results of the field measurements (taken over 72+ hours) yielded nearly matching DNL levels to the analysis.
- The Building facade was evaluated for noise exposure based on floor elevation and distance from I-40 to meet the facade STC requirements. A markup of the facade is included with sound levels (DNL) and areas requiring upgraded window STC.
    - Two facade construction types were evaluated for sound transmission, along with window grades and sizes, and the VTAC ventilation system and its opening to the outside. The HUD STraCAT online tool was employed to evaluate pass/fail and the required window upgrades.

Overview

The proposed site for the Legends Park assisted living facility on Peach Ave in Memphis was evaluated for transportation noise exposure and the building envelope was evaluated for sound reduction to meet HUD requirements. The investigation involved short and long term sound level measurements onsite with observations and a site investigation, analysis of traffic using HUD methods combined with double barrier calculations, and evaluation of the building envelope to ensure the exterior facade met STC requirements as identified by HUD for any areas over 65DNL.

Exposure for the building due to transportation sound sources does not exceed 75dB DNL, so a portion of the building falls into the category “Normally Unacceptable” and the facade sound transmission characteristics in those locations require verification and /or modification to ensure internal sound level criteria are met. Some portions of the building require an upgrade of windows; these locations are indicated in the summary markup.

Transportation Noise Sources

The following sound sources were evaluated for noise impact on the building facade and to determine DNL exposure:

- **Interstate Highway I-40 (east-west), parallel to the building north wall.**
  - This is the main concern, at 130’ to the north.
  - The highway has a barrier on both sides, creating a reflected (added) image of the traffic noise back toward the building. The methods and analysis are described below.
  - Standard barrier attenuation analysis follows HUD Chapter 5.

- **Helicopter traffic**

  - Several medical facilities are in the immediate vicinity, and are serviced by commercial helicopter service(s). Two helicopters were observed during the site investigation, at a distance, and one was measured for reference. The sound level at the pass was 67dBA with traffic, traffic alone at the time of the measurement was 64dBA.

  - Flights are on demand and flight paths are dependent on destination and departure locations.

  - The commercial heliport is located 4700 ft from the site om I-69, and the nearest rooftop receivers are Le Bonheur Children’s Hospital (2100 ft) and Regional One Health (2900 ft).

  - Helicopter noise (events) for this site was considered inconsistent and not quantifiable in the scope of this study.

- **Commercial Aircraft**
  - Commercial aircraft were observed at different heights and flight paths during the fieldwork and one measurement made. The sound level of traffic with the aircraft was 66dBA, and traffic alone was 64dBA during that particular measurement. Due to the frequency of flights in this direction, these are occasional events.

  - Flight paths based on Memphis International Airport Part 150 Study Update (September 1, 2015) do not impact any locations north of Hwy 78 (see attached map), so aircraft noise is not considered in this study.

The Site map is shown in **Figure 1**. I-40 runs east-west with a noise barrier on both sides. Traffic data from TDOT is shown in **Table 1**.

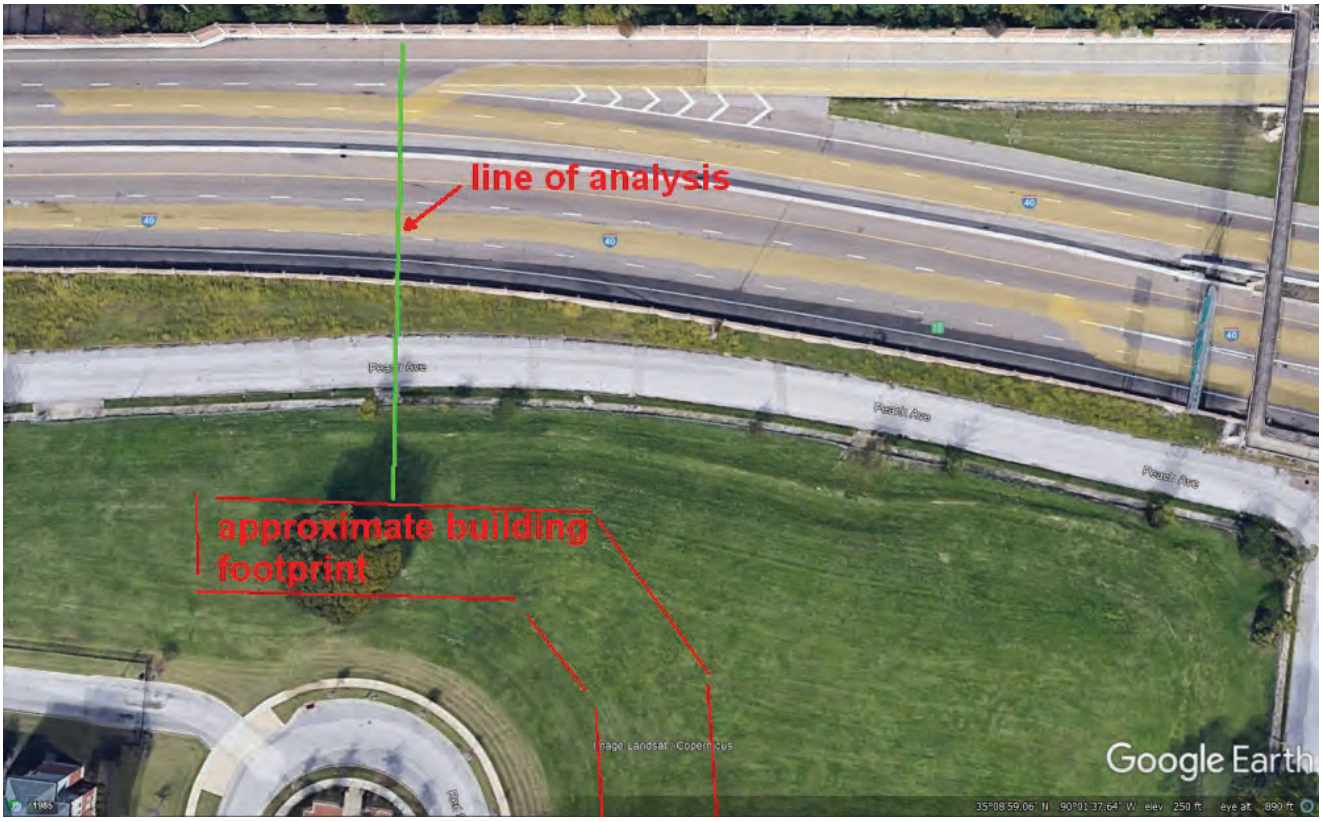

Figure 1: Layout of site relative to I-40 Interstate highway. Building location is approximated. The line of analysis is shown. The facade of the building is 131' from the barrier

				WB	23355	19851.75	467.1	3036.15	

Table 1: TDOT Traffic Data

Analysis Method

The analysis follows HUD Noise Guide methods and integrates the double barrier analysis method:

- East bound and west bound sources are treated individually as a source at the center of the lanes.
  - Trucks are evaluated at 8' and automobiles and medium trucks are evaluated at pavement as the source height.
  - East and west bound lanes are evaluated graphically as a mirror image from the far barrier to determine if there is a reflection, and based on the added distance.
  - Each donation from each of the 4 lanes (EB, WB, EB image, WB image) and the two different sources are determined using the HUD DNL calculator.
- HUD Barrier Calculation method is used (below) to determine the attenuation for each source at each level of the building. Some sources pass over the barrier and are not attenuated.
- All sources (attenuated and non- attenuated) are combined at each building level to determine the incident DNL at the facade.

- Since the north face of the building is effectively parallel to I-40, the north face is treated uniformly
- Facades on the side of the building (east and west) are considered shielded and receive an additional 3dB reduction (½ power).
- As the east and west facades recede from I-40, additional sound attenuation is achieved due to distance.
- The South side of the building is fully shielded and receives 10dB reduction in the analysis, putting that section inside “acceptable” sound levels as determined by HUD (65DNL and below).

- The individual components of the facade of the building (wall construction, windows, and HVAC intake/exhaust louver) are evaluated for sound transmission class (STC). Each unit is then evaluated for pass/fail using STraCAT (HUD sound transmission Classification Assessment Tool) with the composite facade STC and the exterior DNL. This is done for each part of the building where the DNL changes.
  - If a part of the building does not meet the STC requirement of the facade, recommendations are made to meet the requirements based on coordination with the architect.

Barriers Data

Barrier calculations are dependent on height of barrier, source and receiver. The following methods were used to determine the heights of traffic sources, barrier, and receivers shown in **Figure 2**.

- C-6 was used as a reference for elevations of the foundation of the building, the south sidewalk, and Peach Ave.
- Elevations of the building were taken from A202
- The relative elevations were correlated to Google Earth (5 ft difference) at the sidewalk and Peach Ave.
- Google Earth provided the elevations of I40, then translated back to the C-6 reference drawing.
- Google Earth was also used for distance calculations to reference points on C-6, including highway (East Bound/West Bound) traffic centers.
- The barrier height was measured physically in the field at several locations from the I-40 side.
- Truck sound source is 8’ above the road, and automobile sound source is at the road elevation (Ch5 HUD Noise Manual).

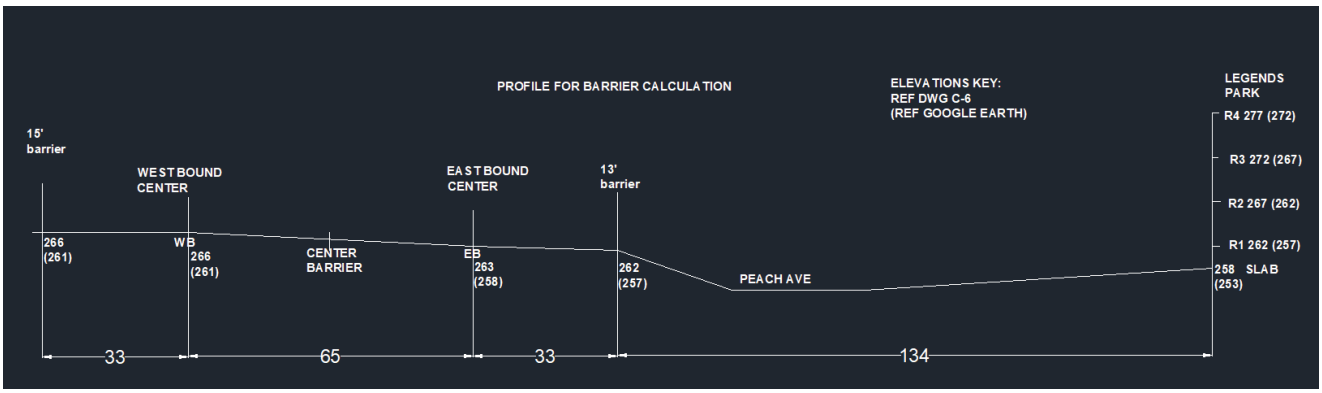

Figure 2: Elevations and distances (in feet) used for the barrier attenuation and DNL analysis. Distances and elevations were taken from Google Maps (the highway, Peach Ave, and sidewalk) and C-6 grading plan sitemap (location of building relative to Peach Ave and Sidewalk).

Barrier Calculation Method

Buildup of reflected sound between parallel (hard) sound barriers increases the sound level of the highway sound source. This can have an impact on the DNL at the receiver; the double barrier creates a reflected image of the traffic noise that travels toward the receiver. The following method was used to determine the added impact of the double barrier.

- The sound source is modeled a second time as the image of the reflection (further away, as an image in a mirror), and (logarithmically) add the result to the original source.
    - **Figures X-Y** provide four examples of the location of the highway sources and images of the highway sources and the rays used to determine if the barrier effect is to be calculated. As can be seen, the images are farther away from the receiver (and as a result produce less sound at the receiver).
        - As per HUD Noise Guide, if there is a line of sight between the source and receiver (the line does not pass through the barrier), no barrier effect is calculated.
    - The reflection is assumed to be minimally attenuated by the process of reflection, as the barrier is non porous concrete.
    - HUD does not make provisions for this condition in the HUD Noise manual or in the HUD online barrier calculation. This method can be found in, among other references:
        - Noise and Vibration Control Engineering, Ver and Beranek, 2006.
        - Architectural Acoustics, Marshall Long, 2006.
- If the image ray does not pass through the reflecting barrier on the path to the receiver, there is no reflected image to add. The sound passes over the far barrier and is not reflected back to Legends Park.
- Due to source height, each car/medium truck source and heavy truck source and their images is analyzed separately with regard to the blocking barrier, and the results are combined at the receiver. (HUD Noise Manual, Ch5).
- Due to the height of the building, each floor is analyzed separately to determine DNL, as the barrier and the reflected images all have a different impact as the geometry changes.

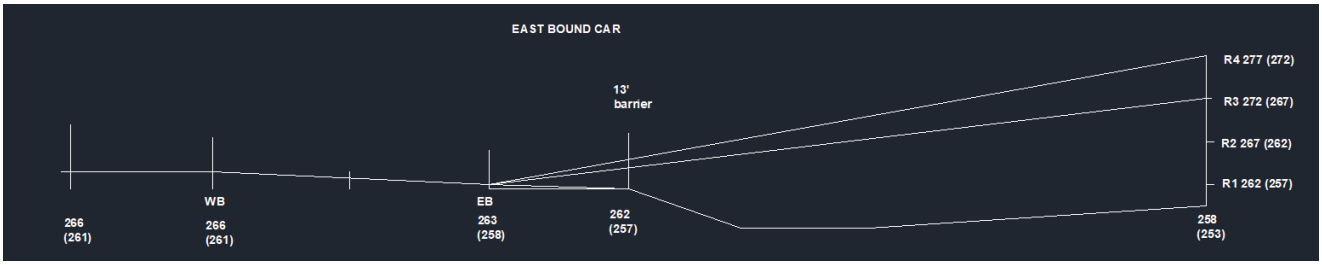

Figure 3: East Bound car example. The barrier is effective for all receiving levels of Legends Park

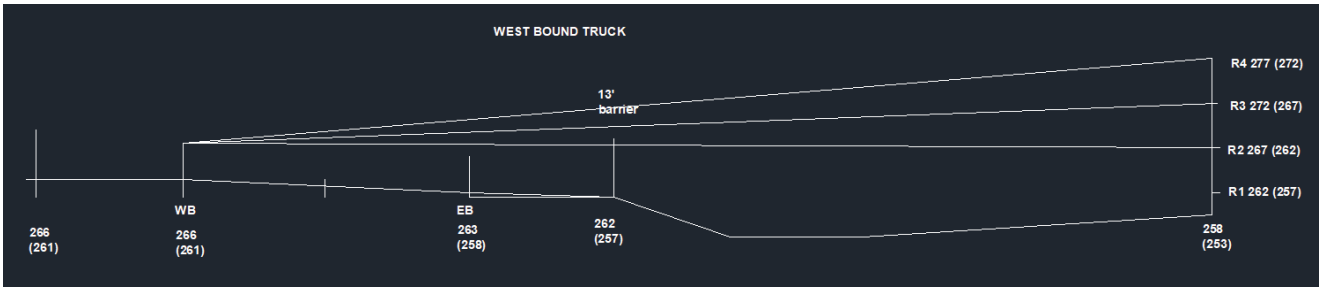

Figure 4: West Bound truck example. The barrier is ineffective for the top two receiving levels of Legends Park.

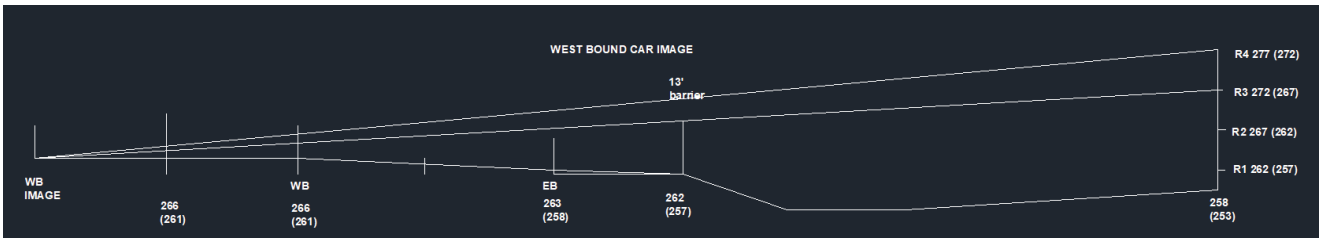

Figure 5: West Bound image car example. The barrier is ineffective for the top two receiving levels of Legends Park.

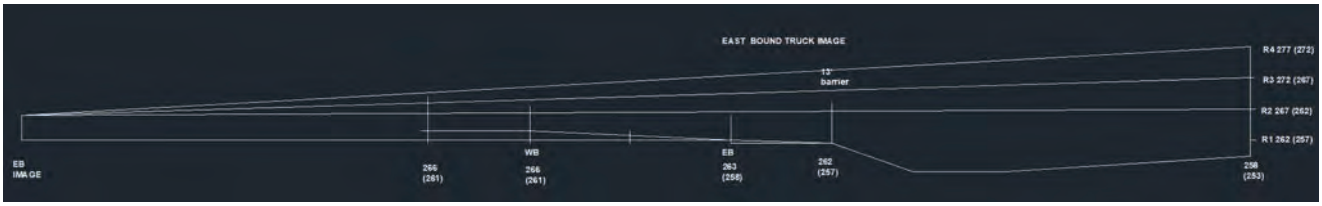

Figure 6: East Bound image truck example. The barrier is ineffective for the top two receiving levels of Legends Park, however it can be seen that the source passes over the left most barrier in the line of sight to R4, so there is no reflected image in the first place.

Building Facade Analysis

The building facade can be seen on the summary markup sheet and bedrooms consist of a wall and window, the living area includes a wall, window, and ventilation opening.

Exterior walls

Two types of exterior wall were evaluated for STC, which was used in the STraCAT model, shown in **Figure 7.**

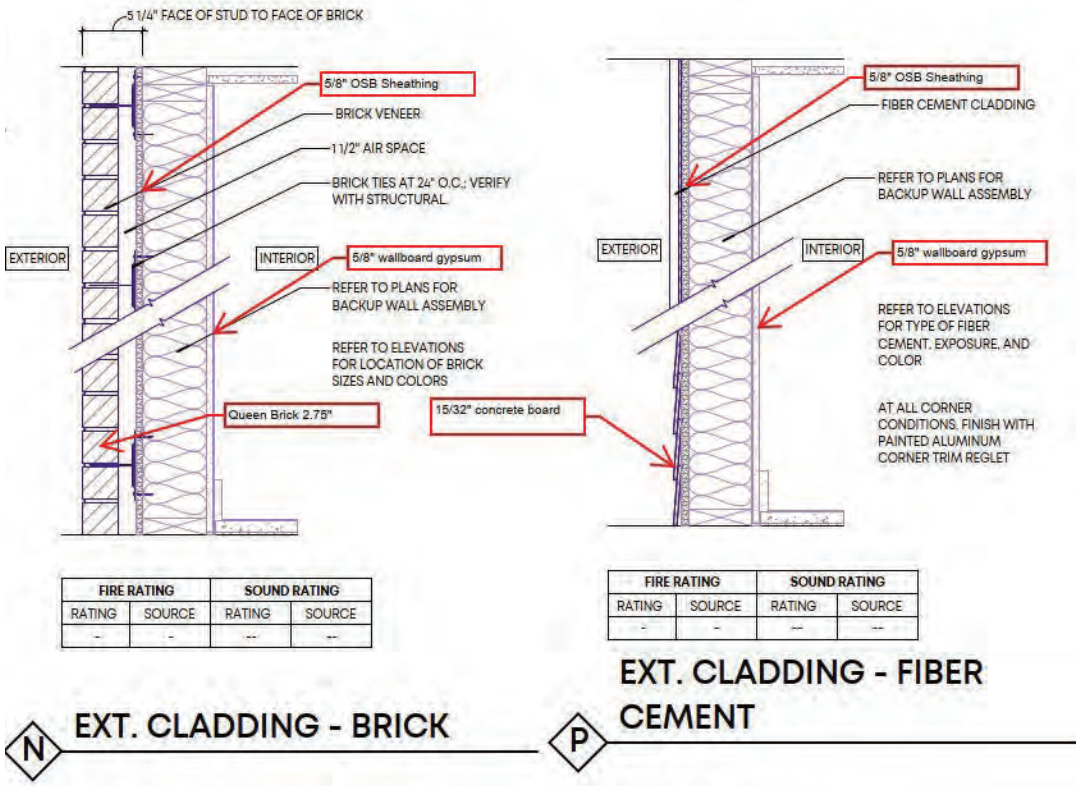

Figure 7: Exterior Building assemblies. Type N was assigned STC51 minimum, and Type P was assigned STC37 minimum. Neither of the assemblies are in the HUD STraCAT library. These estimates are conservative in our opinion.

STC values were assigned based on other assembly test reports from manufacturer data, NRCC and the 1980 California Guide (used by HUD), as well as the INSUL sound insulation software. It is believed that these estimates are reasonable.

Note that while the brick assembly (N) is significantly more robust than the cement board cladding assembly (P), the windows and HVAC openings (below) are significantly weaker and drive the composite STC of the assembly; there is not a significant difference between the final results for the two wall assemblies.

Windows

The windows used for the project are Ply Gem 1500 series. The STC test report is shown in Table 2 and the relevant windows we are considering for he project are STC 26, 27, and 31. For this project the STC 26 window is used as the basis of design, and any recommended upgrades utilize the STC 31 model.

PLY GEM WINDOWS

Ply Gem 1500

Sound

	Glass Construction				Sound Rating

Table 2: Ply Gem 1500 window STC data from manufacturer.

HVAC exterior ventilation.

The heating and cooling units specified for this project are Friedrich Vert-I Pak VHA18 and VHA24. The STC of a unit installed in a standard closet configuration is shown in **Table 3**. For reference, the unit distribution was provided as follows:

- 18kBTU VTAC-1 in units A1.1, A1.2, A1.3, A1.4, A1.5, and A1.6
- 24kBTU VTAC-2 in units A2.1, A2.2, B1.1, B1.2, and B1.3

The analysis uses the STC 24 option for simplicity.

Sound Data

Sound Power and STC					
MODEL		INDOOR (DBA)		OUTDOOR (DBA)	
	STC	HIGH COOL	LOW COOL	HIGH COOL	LOW COOL

Table 3: Friedrich Vert-I-Pak STC data from manufacturer's Service/Parts Manual. The units of interest are highlighted.

Results of DNL and STraCAT Anaysis

Using the HUD DNL Calculator online tool, each sound source (east bound, West bound, eastbound image and west bound image was determined based on the traffic counts in **Table 1** provided by TDOT. These results are shown in **Table 4**. Note that EB trucks (east bound) image is zero, as the wall is not tall enough to make a reflection to reach R4 (receiver 4th floor).

DNL (HUD Calculator)

source	cars	med truck	car+mtruck	heavy truck	Receiver #

	50.9	59.8	R2	60.3
	61	68	R3	68.8
	61	68	R4	68.8

Table 7: DNL of each source after barrier effects and the result of cars+ heavy trucks for each source location/receiver location.

Table 8 Provides the final summation for each receiver by floor. This result is the for the north facade of the building. Shielding effects and additional distance effects are noted on the summary markup sheet. Note that the exposure does not exceed 75dBA, which is the limit of "normally unacceptable".

DNL BY FLOOR NORTH WALL

Receiver #	North	East/West
R1	67	64
R2	68	65
R3	74	71
R4	75	72

Table 8: DNL by floor north wall used for facade evaluation

Field monitors were placed on site at ~ first floor elevation height in the building footprint and at Peach Ave at a similar height. The results over four days (1/10/2022 to 1/13/22) yielded:

- Building footprint DNL: 68,67,67, 65
- Peach Ave DNL: 67, 66, 68, 78

The above field data correlates well with the DNL calculation using the barrier image method.

Table 9 provides the input data for STraCAT and the needed window STC to meet the interior noise requirement. The STC values used are shown above in the **building facade analysis**. The yellow highlight indicates the receiver rooms requiring an upgrade in window STC to meet the HUD requirements. These results are indicated on the summary markup sheet.

Bedroom level	Wall Area sqft	Window Area sqft	NO VTAC	North	Shielded East/West	Window STC Needed	
						North	East/West
1	99	34		67	64	26	26
2	99	33		68	65	26	26
3	99	33		74	71	31	31
4	99	19		75	72	31	31

Living level	Wall Area sqft	Window Area sqft	VTAC	North	Shielded East/West	Window STC Needed	
						North	East/West
1	103.5	33	4.9	67	64	26	26
2	103.5	33	4.9	68	65	26	26
3	103.5	43	4.9	74	71	31	31
4	103.5	19	4.9	75	72	31	31

Table 9: Input Data for HUD STraCAT: includes areas in sqft of the building elements, DNL exposure, and window STC required.

The following pages provide sample HUD calculations, reference elevations, and a markup of the building facade for DNL exposure and window modification.

Based on the analysis above, the Legends Park housing project should meet HUD requirements for noise if the windows indicated on the markup are upgraded to STC 31. No other changes to the facade are needed.

Sample DNL calculations

GENERAL GRADING NOTES:

1. A MIMINUM OF 24-HOURS PRIOR TO BEGINNING CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY THE CITY OF MEMPHIS CONSTRUCTION INSPECTION OFFICE AT (901) 636-2462.
2. ALL NEWLY CUT OR FILLED AREAS, LACKING ADEQUATE VEGETATION, SHALL BE SEEDED, MULCHED, FERTILIZED AND/OR SODDED AS REQUIRED TO EFFECTIVELY CONTROL SOIL EROSION.
3. THE LOCATION OF EXISTING UNDERGROUND UTILITIES ARE APPROXIMATE AND NOT NECESSARILY ALL OF SAME. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING THE UTILITY COMPANIES WHICH MAINTAIN A UTILITY LINE WITHIN THE BOUNDARIES OF THE PROJECT PRIOR TO THE INITIATION OF ANY CONSTRUCTION ON THE PROJECT OR IN THE STREETS BORDERING THE PROJECT. THE CONTRACTOR SHALL ALSO ASSUME FULL RESPONSIBILITY FOR DAMAGE TO NY UTILITIES ENCOUNTERED WITHIN CONSTRUCTION PERIMETERS, WHETHER SHOWN ON THE CONSTRUCTION PLANS OR NOT, DURING THE WORK ON THE PROJECT. FOR SITE LOCATION OF EXISTING UTILITIES INVOLVING MLG&W, SOUTH CENTRAL BELL, AND/OR TEXAS GAS COMPANY, CALL 1-800-351-1111. FOR SEWER LOCATIONS CALL 529-8025.
4. CONTRACTOR SHALL MAINTAIN ACCESS TO ALL PROPERTIES.
5. ALL FILL SOILS SHALL BE COMPACTED TO A MINIMUM OF 95% OF STANDARD PROCTOR DENSITY (ASTM D-698) WITHIN 3% OF OPTIMUM MOISTURE CONTENT IN LIFTS NOT TO EXCEED SIX (6) INCHES OF COMPACTED THICKNESS.
6. ALL CONSTRUCTION MATERIALS AND PROCEDURES SHALL MEET OR EXCEED THE REQUIREMENTS OF THE CITY OF MEMPHIS STANDARD CONSTRUCTION SPECIFICATIONS.
7. PROPERTY LINES SHALL BE FIELD VERIFIED PRIOR TO CONSTRUCTION. GRADING, CLEARING AND THE ERECTION OR REMOVAL OF FENCES ALONG PROPERTY LINES SHALL BE FULLY COORDINATED WITH ADJACENT PROPERTY OWNERS.
8. VERIFY SITE CONDITIONS PRIOR TO CONSTRUCTION. NOTIFY THE CITY OF MEMPHIS CONSTRUCTION INSPECTION OFFICE ENGINEER OF ANY VARIATIONS PRIOR TO COMMENCEMENT OF WORK.
9. ALL GRADING WORK SHALL BE PERFORMED IN SUCH A MANNER THAT ADJACENT PROPERTIES ARE NOT DAMAGED OR ADVERSELY AFFECTED.
10. LOT DRAINAGE: FINISH GRADE SHALL BE SLOPED AWAY FROM THE FOUNDATION FOR DRAINAGE. THE FINISH GRADE MUST BEGIN AT LEAST 12-INCHES BELOW THE TOP OF THE FOUNDATION WALL OR THE GRADE OF THE CONCRETE SLAB AND FOUNDATION. THE MINIMUM GRADE AWAY FROM THE FOUNDATION SHALL BE TWO PERCENT (2%) IN ALL DIRECTIONS. THE DRIVEWAY SHALL BE SLOPED DOWN AT TWO PERCENT (2%) FOR AT LEAST EIGHT FEET FROM THE STRUCTURE.

FEMA NOTE:
THIS PROPERTY IS LOCATED IN "ZONE X" AS DEFINED BY FEMA TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN.

Re: Legends Park Subdivision — Memphis, Tennessee
No Effect Determination Acknowledgement Request

To Whom It May Concern:

EnSafe has conducted a Phase I Environmental Site Assessment for a parcel located south of Peach Avenue and north of Delmar Avenue, east of Ayers Street, and west of Decatur Street in Memphis, Shelby County, Tennessee (the Site). The goal of the Phase I Environmental Site Assessment Report was to identify evidence of recognized environmental conditions, including the identification of any critical habitat designated by the U.S. Fish and Wildlife Service for threatened species and endangered species under the Endangered Species Act (ESA). The proposed project will construct a multi-unit housing facility for senior citizens within the footprint indicated in Attachment A. Due to the lack of suitable habitat present at the site for ESA-listed species, it is EnSafe's determination that the project's actions will not affect any ESA-listed species or designated critical habitat (i.e., "no effect" determination). EnSafe is requesting the U.S. Fish and Wildlife Service's acknowledgment of the determination that the proposed action will not affect a listed species or designated critical habitat.

Respectfully submitted,

EnSafe Inc.

Subject: Re: [EXTERNAL] USFS Concurrence Request Letter 021022.pdf

Allison,

Although we can only provide concurrence to species determinations when they come from the lead federal agency, and we can not officially concur with a no effect determination, we do acknowledge the no effect determination that Ensafe has made for the proposed multi-housing facility for senior citizens at a parcel located south of Peach Avenue and north of Delmar Avenue, east of Ayers Street, and west of Decatur Street in Memphis, Shelby County, Tennessee.

Our database does not indicate any federally listed species in the vicinity of the project site, and we have no concerns.

Sincerely,

Robbie Sykes

NOTE
Please be advised that a building permit issued by the Memphis/Shelby County Office of Construction Code Enforcement does not allow for alterations and/or improvements to any Right-Of-Way (R.O.W.) maintained by the City of Memphis. Alterations and/or improvements to City of Memphis R.O.W. include, but are not limited to, work performed on sidewalks, curb and gutter, driveway aprons and utility tie-ins. R.O.W. permits must be obtained from the Memphis City Engineer's Office at ph. 576-6700.

The lots within this subdivision shall remain under common ownership. If the ownership of the lots within this subdivision become diversified, a property owners' association shall be created and this plat shall be re-recorded. The master deed of the property owners' association shall be recorded in concurrence with the re-recording of this plat, with the instruments cross-referencing each other. In such an event, all commons, open areas, lakes, drainage detention facilities, private streets, private sewers and private drainage systems shall be owned and maintained by the Property Owner's Association.

USER QUESTIONNAIRE AND PROPOSAL CHECKLIST
ASTM E1527-13 Phase I Environmental Site Assessment

1. Applicability — Per ASTM E1527-13, if the reason for the Phase I ESA is not provided, EnSafe shall assume the purpose is to qualify for one of the landowner liability protections listed in a., b., or c. (below).

Please identify from the lists below all applicable reasons for requesting this Phase I Environmental Site Assessment:

Reasons applicable to the "All Appropriate Inquiries" Final Rule (40 Code of Federal Regulations Part 312):

- ☐ a. Person seeking to establish the innocent landowner defense to CERCLA liability
- ☐ b. Person seeking to establish bona fide prospective purchaser landowner liability protection to CERCLA liability
- ☐ c. Person seeking to establish the contiguous property owner landowner liability protection to CERCLA liability
- ☐ d. Person conducting site characterization and assessments with the use of a CERCLA grant (Brownfields)

If one of the above is applicable, please complete the "User Responsibilities" questions in Section 2.

Additional reasons for performing a Phase I Environmental Site Assessment:

- ☑ e. As part of due diligence prior to purchase
- ☑ f. Obtaining financing
- ☐ g. Selling a property
- ☐ h. Originating or renewing a lease
- ☐ i. Terminating a lease or vacating a property
- ☑ j. In anticipation of a property/business ownership transaction
- ☐ k. Establishing baseline conditions at a property
- ☐ l. Identifying potential business environmental risks associated with a property

A business environmental risk is defined by ASTM E1527-13 as a risk that can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to required components within the scope of an ASTM Phase I ESA. Business environmental risks are commonly associated with ASTM "non-scope issues" listed in Section 4. If Box l. is selected in this section, please complete Section 4.

Yes	No	**2. User Responsibilities**

These are tasks under the "All Appropriate Inquiries" Final Rule at 40 Code of Federal Regulations Part 312 that must be performed by or on behalf of the party seeking to qualify for a landowner liability protection to CERCLA liability. EnSafe is required to request the intended "User" of the Phase I ESA provide the information from those tasks, as it may be material in identifying recognized environmental conditions. Although the User of the Phase I ESA is not required to provide that information to EnSafe, the User remains responsible for their completion. For any boxes that are checked "Yes" please provide the additional information that you would like EnSafe to consider as part of the Phase I ESA. If the User of the Phase I ESA is not seeking a landowner liability protection to CERCLA liability but has pertinent information, answering the following questions will assist EnSafe.

☑	☐	a. Are there any environmental cleanup liens or activity and land-use limitations in place or filed or recorded against the property under federal, tribal, state, or local law, based on review of recorded land titles and judicial lien records? *If you haven't obtained the information through transaction-related title insurance documents, title abstracts, etc., would you like EnSafe to obtain and review land title records and judicial records at an additional cost (determined based on the number of parcels)? If so, please contact us for a quote.*
☐	☑	b. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☐	☐	c. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? In other words, what is the relationship of the purchase price to the fair market value of the property, if the property were not contaminated? If you conclude that there is a difference, is the lower purchase price related to contamination that is known or believed to be present at the property?

N/A ground lease

USER QUESTIONNAIRE AND PROPOSAL CHECKLIST
ASTM E1527-13 Phase I Environmental Site Assessment

☑	☐	d. Are you aware of commonly known or reasonably ascertainable information about the property that would help EnSafe identify conditions indicative of releases or threatened releases? For example, (i.) The past uses of the property? (ii.) Specific chemicals are or have been used or stored at the property? (iii.) Spills or other chemical releases that have occurred at the property? (iv.) Environmental cleanups that have taken place at the property? (v.) Do you have other information relevant to the Phase I ESA? BVA Agreement - Ensafe has the appropriate information
☐	☑	e. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property?
		3. Special Reporting Requirements (if applicable)
		Specify whether you, your client, and/or lender have special requirements for the Phase I ESA?
☐		a. No additional requirements apply to this Phase I ESA.
☑		b. Additional requirements apply and have been attached or discussed. Must meet THDA NHTF standards - communicated to Ensafe
		4. ASTM Non-Scope Considerations
		If you would like EnSafe to include any of the following issues as part of the Phase I ESA, please check the appropriate box, and an EnSafe representative will contact you, as necessary, to discuss further and determine whether modifications to the attached cost estimate will be necessary.
☑		a. Asbestos-Containing Materials
☑		b. Radon
☑		c. Lead-Based Paint
☑		d. Lead in Drinking Water
☑		e. Wetlands
☑		f. Regulatory Compliance — Environmental
☑		g. Regulatory Compliance — Health and Safety
☑		h. Indoor Air Quality
☑		i. Mold
☑		j. Substances not Defined as Hazardous Substances (aka emerging contaminants like PFAS)
☑		k. Vapor Intrusion
☑		l. Biological Agents
☑		m. Cultural and Historic Resources
☑		n. Ecological Resources
☑		o. Endangered Species
☑		p. Industrial Hygiene
☐		q. Other (please specify)
Yes	**No**	**5. Additional Requirements**
		Is this Phase I ESA being conducted:
☐	☐	a. To satisfy environmental policy requirements of the Small Business Administration (SBA), or is SBA otherwise involved in lender or development aspects of this property?
☐	☐	b. To document compliance with Housing and Urban Development standards at 24 Code of Federal Regulations 58.5(i)(2) or 50.3(i)?

 Legal Notices

PUBLIC NOTICE
State of Tennessee
Department of Environment and Conservation
Division of Remediation
Notice of an Approved Administrative Settlement Pursuant to 42 U.S.C. § 9613(f)
Brownfield Redevelopment of 945 Peach Avenue, Memphis, Tennessee (also known as the Peach Avenue/Block A Site - DoR Site # 79-846S1)

The Division of Remediation ("DoR") has accepted into its Brownfield Program a parcel of property (approximately 3.820 acres), which has been complicated by real or perceived adverse environmental conditions, to facilitate redevelopment and continued use of the property (the "Site") by the Memphis Housing Authority, Legends Park Senior LLC and Pennrose, LLC (the "Voluntary Parties"). The Brownfield Voluntary Agreement ("Agreement") between the Voluntary Parties and DoR includes liability protection for the Voluntary Parties and any successor parties, including protection against third-party contribution claims regarding matters identified and addressed in the Agreement. This notice serves the dual purpose of notice of the terms of the Agreement to the public and to third parties who may hold contribution claims under 42 U.S.C. § 9613(f).

The Site is located at 945 Peach Avenue in Memphis, Tennessee. The Site is currently undeveloped. The Voluntary Parties plan to construct a residential facility at the Site. The Site was once part of the Dixie Homes housing complex. It also appears that a clothes cleaner and presser operation may have been located at the Site for a limited amount of time.

The Site has been the subject of environmental investigations, the results of which have been reviewed by DoR. Reports of the investigation and remediation of the Site are on file with the DoR. These investigations concluded that the Site has been impacted by hazardous substances, solid wastes or other pollutants determined to be present in this Site relating to the historical operations at the Site and/or at neighboring properties. Contaminants remaining at the Site in soil, soil gas, or groundwater include benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, arsenic, chromium, naphthalene, and benzene. Due to the presence of these constituents, a soil management plan has been developed to govern activities associated with the redevelopment of the Site. Land use restrictions will be placed on the Site to limit and/or control certain future activities. These and other measures required by DoR under the Agreement for the Site will ensure protection of human health and the environment.

The public may contact Ms. Merrie Salyers in the Memphis office of the Department of Environment and Conservation, Division of Remediation, 8383 Wolf Lake Drive, Bartlett, Tennessee 38133-4119 or by phone at (901) 371-3151 to obtain a copy of the Agreement or for more information. DoR is accepting written comments on the Agreement from the public and those who may have contribution claims for thirty (30) days after the date of publication of this notice, and these comments should be mailed to Ms. Merrie Salyers at the above address.

Resumes

MATTHEW COOLEY
SENIOR GEOLOGIST, PROJECT MANAGER

EDUCATION

MS, Geophysics, The University of Memphis, 2014

BS, Geology, Middle TN State University, 2012

REGISTRATIONS, CERTIFICATIONS, & TRAINING

Professional Geologist, AR, 00003019

Professional Geologist, TN, 6137

OSHA 40-hr Hazardous Waste Operations and Emergency Response (HAZWOPER)(29 CFR 1910.120)-Initial

OSHA 8-hr Hazardous Waste Operations and Emergency Response (HAZWOPER)(29 CFR 1910.120)-Refresher

CPR/First Aid/AED

Matthew is a results-driven Professional Geologist with over 8 years of experience in environmental consulting, site characterization, and remediation project management. He is skilled in developing proposals, managing budgets and schedules, and leading multidisciplinary teams to deliver high-quality client solutions. His expertise includes soil, groundwater, and air sampling; subcontractor oversight; remediation system operations; and regulatory reporting. Adept at health and safety planning, Phase II ESAs, and developing conceptual site models to support decision-making.

RELEVANT EXPERIENCE

2024 Desktop Reviews, Helena Agri-Enterprises, LLC, Multiple Locations (Present)

As Geologist, Matt provided desktop support to review potential liability associated with a site prior to client's acquisition of the property. He included desktop review of various records associated with the property.

NAVATL-CL0005_F0101_Site 4 Corry Station USTs 20 22 25 Outlying Fields Petroleum Program GW Monitoring, Resolution Consultants, Pensacola, FL (Present)

As Geologist, Matt provided regulatory compliance support for a US Navy CLEAN site. He drafted a Five-Year Review Report summarizing and evaluating effectiveness of site activities and selected remedies for the previous five-year period.

WEYER Remediation Project, Weyerhaeuser NR Company, DeQueen, AR (2025)

As Geologist, Matt produced a complex groundwater potentiometric surface map.
